Designing Mobile Service Systems Els van de Kar,Alexander Verbraeck,2008 Annotation. In this book we describe the design of services from a systems perspective. In this systems perspective we explain three elements of the service system that have to be balanced: the service concept with the value proposition to the users; the organisational network in which stakeholders have to cooperate to develop and deliver the service; and the technical architecture that uses information and communication technologies to deliver the content. These three main elements of a service system are described in detail, and illustrated with examples of services from different domains. The elements are integrated into a methodology that describes how to design, implement and test mobile service systems. The trend is that service systems will become time and place independent and at the same time context dependent. Therefore the design of service systems that can be used anytime and anyplace will become common practice.--Jacket.

Mobile Service Innovation and Business Models Harry Bouwman,Henny de Vos,Timber Haaker,2010-10-19 Modern economies depend on innovation in services for their future growth. Service innovation increasingly depends on information technology and digitization of information processes. Designing new services is a complex matter, since collaboration with other companies and organizations is necessary. Service innovation is directly related to business models that support these services, i.e. services can only be successful in the long run with a viable business model that creates value for its customers and providers. This book presents a theoretically grounded yet practical approach to designing viable business models for electronic services, including mobile ones, i.e. the STOF model and – based on it – the STOF method. The STOF model provides a ‘holistic’ view on business models with four interrelated perspectives, i.e., Service, Technology, Organization and Finance. It elaborates on critical design issues that ultimately shape the business model and drive its viability.

A Case Study of Mobile Virtual Network Operator in Hong Kong ,

Map-Based Mobile Services Liqiu Meng,Alexander Zipf,2005 The book is divided into three parts: theory, method and implementation. Starting with

a summary of the state-of-the-art in mobile technologies, the first part analyses their impacts on cartography and pinpoints the missing theories concerned with the development of map-based mobile services. A conceptual framework of mobile cartography is then introduced with the emphasis on mobile usage context. The second part is devoted to the design methodology under the constraints defined in the theoretical framework. A core issue deals with personalised mobile map services. The final part demonstrates the feasibility of the methods by using application scenarios. The accompanying CD-ROM contains the PDF-Files in colour.

Information Networking. Wireless Communications Technologies and Network Applications Ilyoung Chong, 2002-09-18 The papers comprising Vol. I and Vol. II were prepared for and presented at the International Conference on Information Networking 2002 (ICOIN 2002), which was held from January 30 to February 1, 2002 at Cheju Island, Korea. It was organized by the KISS (Korean Information Science Society) SIGIN in Korea, IPSJ SIG DPE (Distributed Processing Systems) in Japan, the ITRI (Industrial Technology Research Institute), and National Taiwan University in Taiwan. The papers were selected through two steps, refereeing and presentation review. We selected for the theme of the conference the motto “One World of Information Networking”. We did this because we believe that networking will transform the world into one zone, in spite of different ages, countries and societies. Networking is in the main stream of everyday life and affects directly millions of people around the world. We are in an era of tremendous excitement for professionals working in many aspects of the converging networking, information retailing, entertainment, and publishing companies. Ubiquitous communication and computing technologies are changing the world. Online communities, e commerce, e service, and distance learning are a few of the consequences of these technologies, and advanced networking will develop new applications and technologies with global impact. The goal is the creation of a world wide distributed computing system that connects people and appliances through wireless and high bandwidth wired channels with a backbone of computers that serve as databases and object servers.
