Mobile Research Methods Daniele Toninelli, Robert Pinter, Pablo de Pedraza, 2015-05-25 Daily activity sees data constantly flowing through cameras, the internet, satellites, radio frequencies, sensors, private appliances, cars, smartphones, tablets and the like. Among all the tools currently used, mobile devices, especially mobile phones, smartphones and tablets, are the most widespread, with their use becoming prevalent in everyday life within both developed and developing countries. Shopping, reading newspapers, participating in forums, projecting and completing surveys, communicating with friends and making new ones, filing tax returns and getting involved in politics are all examples of how ingrained mobile technology is to modern lifestyle. Mobile devices allow a wide range of heterogeneous activities and, as a result, have great potential in terms of the different types of data that can be collected. The use of mobile devices to collect, analyse and apply research data is explored here. This book focuses on the use of mobile devices in various research contexts, aiming to provide a detailed and updated knowledge on what is a comparatively new field of study. This is done considering different aspects: main methodological possibilities and issues; comparison and integration with more traditional survey modes or ways of participating in research; quality of collected data; use in commercial market research; representativeness of studies based only on the mobile-population; analysis of the current spread of mobile devices in

several countries, and so on. Thus, the book provides interesting research findings from a wide range of countries and contexts. This book was developed in the framework of WebDataNet's Task Force 19. WebDataNet, was created in 2009 by a group of researchers focusing on the discussion on data collection methods. Supported by the European Union programme for the Coordination of Science and Technology, WebDataNet has become a unique, multidisciplinary network that has brought together leading web-based data collection experts from several institutions, disciplines, and relevant backgrounds from more than 35 different countries.

The Handbook of Mobile Market Research Ray Poynter, Navin Williams, Sue York, 2014-10-06 The premier guide to mobile market research The Handbook of Mobile Market Research is the first guide to focus exclusively on the use of mobile technology in market research. From a global perspective, more people own mobile phones than landlines or computers, and most people have their mobile phones with them at all times—along with their tablets, smartwatches, media players, and navigation devices. The continuous surge of mobile innovation provides unprecedented access to real-time consumer behaviour. Mobile market research allows users to reach more people, engage more people, and collect more valuable data as respondents are free to engage at their own pace, on their own time. Industry forerunners Ray Poynter, Navin Williams, and Sue York employ decades of study to examine the present and future state of mobile market research, as well as the advantages and disadvantages of

various approaches. This book contains clear, comprehensive knowledge for those who implement, utilise, and study the field. Readers will learn: The characteristics, scope, and importance of mobile market research Purposes and effects of principal tools like brand tracking, ad testing, customer satisfaction research, and research technology How mobile devices are used for qualitative and quantitative research by way of online focus groups, online discussions, mobile diaries, mobile ethnographies, and mobile surveys Aspects and implications of mobile computer interviews, mobile phone interviews, mixed-mode research, international mobile research, and research using passive data, panels, lists, and communities The significance of the mobile ecosystem, market research ethics, and research on research Designed to be accessible and helpful for beginners and advanced users alike, The Handbook of Mobile Market Research is an extensive guide to one of the most promising, dynamic methods of data collection.

C'est la vie!: Mixed impacts of an edutainment television series in West Africa Dione, Malick, Heckert, Jessica, Hidrobo, Melissa, Le Port, Agnès, Peterman, Amber, Seye, Moustapha, 2023-12-13 Edutainment shows promise in changing behavior at scale, yet little is known about how to maximize impacts. We undertake an experimental evaluation of a popular television series, *C'est la vie!*, delivered through film clubs in rural Senegal, on violence against women and girls, and sexual and reproductive health knowledge, attitudes, and behaviors. We find *C'est la vie!* improved knowledge

three months after film clubs ended, as well as violence-related attitudes nine months later, however, find no impacts on behaviors. We investigate design components intended to strengthen impacts, generally finding no additional impacts from post-screening discussions, engaging men, and podcasts.

Structural Change in Transportation and Communications in the Knowledge Society Kiyoshi Kobayashi, T. R. Lakshmanan, William Peter Anderson, 2006-12-21

The transformation of the world economy from a system of nations trading materials-intensive goods to a system of seamless global networks for information-intensive goods and services has created the need for a comprehensive restructuring of transportation and communications activities. The contributors transportation and communications analysts from Japan and the United States address this restructuring from a variety of perspectives ranging from theoretical treatments of the role of information in the economy to applications of communications technologies for the collection of travel data. The authors transcend traditional methods of transportation and communication analysis in order to address emerging issues that are not well represented by the prevailing cost benefit framework. Many draw from advances in social sciences, such as game theory, that recognize the interdependence of human decision making. New ways of assessing the economic benefit of infrastructure and the evolving role of institutions in the information economy are demonstrated, along with novel approaches to analyzing human mobility and interaction in a knowledge-rich environment. By moving beyond traditional forms of analysis that were better suited to an earlier time, the chapters in this book provide a wealth of insights for policy formulation in

the globalized knowledge economy. This comprehensive volume will be of great value to regional scientists and economic geographers, as well as civil engineers, economists, and analysts interested in transportation and communications.

Surveys In Social Research David De Vaus, David de Vaus, 2013-12-17 David de Vaus' classic text *Surveys in Social Research* provides clear advice on how to plan, conduct and analyse social surveys. It emphasises the links between

theory and research, the logic and interpretation of statistics and the practices of social research. This sixth edition has been completely revised and updated, and contains new examples, data and extensive lists of web resources. As well as explaining how to conduct good surveys, de Vaus shows how to become a critical consumer of research. He argues that the logic of surveys and statistics is simply an extension of the logic we use in everyday life; analysis, however, requires creativity and imagination rather than the application of sterile mechanical procedures. The prime goal of research should be to gain accurate understanding and, as a researcher, use methods and techniques which enhance understanding. De Vaus advocates researchers use the method, rather than letting the method use you. *Surveys in Social Research* is essential reading for students and researchers working with surveys. It assumes no background in statistical analysis, and gives you the tools you need to come to grips with this often challenging field of work.

Web Information Systems and Technologies Valérie Monfort, Karl-Heinz Krempels, 2015-12-15 This book constitutes revised selected papers from the 10th International Conference on Web Information Systems and Technologies, WEBIST 2014, held in Barcelona, Spain, April 2014, organized by the Institute for Systems and Technologies of Information, Control and Communication (INSTICC), and technically sponsored by the European Research Center for Information Systems (ERCIS). technological advances and business applications of web-based information systems. The 21 papers presented in this volume were carefully reviewed and selected originally 153 paper submissions. They were organized in topical sections names, internet technology; web interfaces and applications; society, e-business and e-government; web intelligence; and mobile information systems. The book also contains two invited talks in full-paper length.

ICT in Agriculture (Updated Edition) World Bank, 2017-06-27 Information and communication technology (ICT) has always mattered in agriculture. Ever since people have grown crops, raised livestock, and caught fish, they have sought information from one another. Today, ICT represents a tremendous opportunity for rural populations to improve productivity, to enhance food and nutrition security, to access markets, and to find employment opportunities in a revitalized sector. ICT has unleashed incredible potential to improve agriculture, and it has found a foothold even in poor smallholder farms. ICT in Agriculture, Updated Edition is the revised version of the popular ICT in Agriculture e-Sourcebook, first launched in 2011 and designed to support practitioners, decision makers, and development partners who work at the intersection of ICT and agriculture. Our hope is that this updated Sourcebook will be a practical guide to understanding current trends, implementing appropriate interventions, and evaluating the impact of ICT interventions in agricultural programs.

Pervasive Health Knowledge Management Rajeev Bali, Indrit Troshani, Steve Goldberg, Nilmini Wickramasinghe, 2012-11-06 Pervasive healthcare is an emerging research discipline, focusing on the development and application of pervasive and ubiquitous computing technology for healthcare and wellness. Pervasive healthcare seeks to respond to a variety of pressures on healthcare systems, including the increased incidence of life-style related and chronic diseases, emerging consumerism in healthcare, need for empowering patients and relatives for self-care and management of their health, and need to provide seamless access for healthcare services, independent of time and place. Pervasive healthcare may be defined from two perspectives. First, it is the development and application of pervasive computing (or ubiquitous computing, ambient intelligence) technologies for healthcare, health and wellness management. Second, it seeks to make healthcare available to anyone, anytime, and anywhere by removing locational, time and other restraints while increasing both the coverage and quality of healthcare. This book proposes to define the emerging area of pervasive health and introduce key management principles, most especially knowledge management, its tools, techniques and technologies. In addition, the book takes a socio-technical, patient-centric

approach which serves to emphasize the importance of a key triumvirate in healthcare management namely, the focus on people, process and technology. Last but not least the book discusses in detail a specific example of pervasive health, namely the potential use of a wireless technology solution in the monitoring of diabetic patients.

Handbook of Research on Records and Information Management Strategies for Enhanced Knowledge Coordination Chisita, Collence Takaingenhamo, Enakrire, Rexwhite Tega, Durodolu, Oluwole Olumide, Tsabedze, Vusi Wonderboy, Ngoaketsi, Joseph M., 2021-01-15 The convergence of technologies and emergence of interdisciplinary and transdisciplinary modus of knowledge production justify the need for research that explores the disinterestedness or interconnectivity of the information science disciplines. The quantum leap in knowledge production, increasing demand for information and knowledge, changing information needs, information governance, and proliferation of digital technologies in the era of ubiquitous digital technologies justify research that employs a holistic approach in x-raying the challenges of managing information in an increasingly knowledge- and technology-driven dispensation. The changing nature of knowledge production for sustainable development, along with trends and theory for enhanced knowledge coordination, deserve focus in current times. The *Handbook of Research on Records and Information Management Strategies for Enhanced Knowledge Coordination* draws input from experts involved in records management,

information science, library science, memory, and digital technology, creating a vanguard compendium of novel trends and praxis. While highlighting a vast array of topics under the scope of library science, information science, knowledge transfer, records management, and more, this book is ideally designed for knowledge and information managers, library and information science schools, policymakers, practitioners, stakeholders, administrators, researchers, academicians, and students interested in records and information management.

Mobile Phone Panel Surveys in Developing Countries Andrew Dabalen, Alvin Etang, Johannes Hoogeveen, Elvis Mushi, Youdi Schipper, Johannes von Engelhardt, 2016-07-12 Household survey data are very useful for monitoring living conditions of citizens of any country. In developing countries, a lot of this data are collected through “traditional” face-to-face household surveys. Due to the remote and dispersed nature of many populations in developing countries, but also because of the complex nature of many survey questionnaires, collection of timely welfare data has often proved expensive and logistically challenging. Yet, there is a need for faster, cheaper to collect, lighter, more nimble data collection methods to address data gaps between big household surveys. The recent proliferation of mobile phone networks has opened new possibilities. By combining baseline data from a traditional household survey with subsequent interviews of selected respondents using mobile phones, this facilitates welfare monitoring and

opinion polling almost real time. The purpose of this handbook is to contribute to the development of the new field of mobile phone data collection in developing countries. The handbook documents how this innovative approach to data collection works, its advantages and challenges. The handbook draws primarily from the authors' first-hand experiences with mobile phone surveys in Africa and also benefits from experiences elsewhere. It is intended to serve a diverse audience including those involved in collecting (representative) data using mobile phones, and those using data collected through this approach. For those who will be implementing a mobile phone panel survey, the different chapters guide them through every stage of the implementation process. For potential users of the data collected via mobile phone technology, the handbook presents a new approach to data collection which they can use for monitoring programs and facilitate almost real time decision-making. A further purpose of this book is to contribute to the debate regarding the advantages of the method as well as the challenges associated with it.

Advances in Telephone Survey Methodology James M. Lepkowski, N. Clyde Tucker, J. Michael Brick, Edith D. de Leeuw, Lilli Japac, Paul J. Lavrakas, Michael W. Link, Roberta L. Sangster, 2007-11-09 A complete and comprehensive collaboration providing insight on future approaches to telephone survey methodology Over the past fifteen years, advances in technology have transformed the field of survey methodology, from how

interviews are conducted to the management and analysis of compiled data. *Advances in Telephone Survey Methodology* is an all-encompassing and authoritative resource that presents a theoretical, methodological, and statistical treatment of current practices while also establishing a discussion on how state-of-the-art developments in telecommunications have and will continue to revolutionize the telephone survey process. Seventy-five prominent international researchers and practitioners from government, academic, and private sectors have collaborated on this pioneering volume to discuss basic survey techniques and introduce the future directions of the telephone survey. Concepts and findings are organized in four parts—sampling and estimation, data collection, operations, and nonresponse—equipping the reader with the needed practical applications to approach issues such as choice of target population, sample design, questionnaire construction, interviewing training, and measurement error. The book also introduces important topics that have been overlooked in previous literature, including: The impact of mobile telephones on telephone surveys and the rising presence of mobile-only households worldwide The design and construction of questionnaires using Computer Assisted Telephone Interviewing (CATI) software The emerging use of wireless communication and Voice over Internet Protocol (VoIP) versus the telephone Methods for measuring and improving interviewer performance and productivity Privacy, confidentiality, and respondent burden as main factors in telephone survey nonresponse Procedures for the adjustment

of nonresponse in telephone surveys In-depth reviews of the literature presented along with a full bibliography, assembled from references throughout the world *Advances in Telephone Survey Methodology* is an indispensable reference for survey researchers and practitioners in almost any discipline involving research methods such as sociology, social psychology, survey methodology, and statistics. This book also serves as an excellent text for courses and seminars on survey methods at the undergraduate and graduate levels.

New Directions in Technological Pedagogical Content Knowledge Research Dr. Myint Swe Khine, 2015-05-01 In the past decades wide-ranging research on effective integration of technology in instruction have been conducted by various educators and researchers with the hope that the affordances of technology might be leveraged to improve the teaching and learning process. However, in order to put the technology in optimum use, knowledge about how and in what way technology can enhance the instruction is also essential. A number of theories and models have been proposed in harnessing the technology in everyday lessons. Among these attempts Technological and Pedagogical Content Knowledge (TPACK) framework introduced by Mishra and Koehler has emerged as a representation of the complex relationships between technology, pedagogy and content knowledge. The TPACK framework extends the concept of Shulman's pedagogical content knowledge (PCK) which defines the need for knowledge about the content and pedagogical skills in teaching activities.

Since then the framework has been embraced by the educational technology practitioners, instructional designers, and educators. TPACK research received increasing attention from education and training community covering diverse range of subjects and academic disciplines and significant progress has been made in recent years. This book attempts to bring the practitioners and researchers to present current directions, trends and approaches, convey experience and findings, and share reflection and vision to improve science teaching and learning with the use of TPACK framework. A wide array of topics will be covered in this book including applications in teacher training, designing courses, professional development and impact on learning, intervention strategies and other complex educational issues. Information contained in this book will provide knowledge growth and insights into effective educational strategies in integration of technology with the use of TPACK as a theoretical and developmental tool. The book will be of special interest to international readers including educators, teacher trainers, school administrators, curriculum designers, policy makers, and researchers and complement the existing literature and published works.

Ancestral Knowledge Meets Computer Science Education Cueponcaxochitl D. Moreno Sandoval, 2019-03-25 This book illustrates a pathway for knowledge production to benefit from interweaving the seemingly disparate historical experiences of Indigenous Peoples and computer science education. The resulting practice of ancestral computing for sustainability holds the power

to mitigate the destructive forces of the field, while extending the potential of traditionally underserved and unheard populations. Reimagining the field of computer science, interwoven with traditional lifeways, presents compelling new discoveries in research and harnesses the rich tapestries that are Indigenous populations. Returning healthy lifeways to a center stage long-occupied by tightly controlled, Eurocentric learning methods opens worlds of opportunity that have felt lost to time.
