In addition to its more in-depth coverage of essential background information such as history, culture and religion the guide has expanded treatment for the business traveller and prospective property buyer. Here, some of the oldest human settlements in the world at the Phoenician ports of Tyre, Sidon and Byblos sit alongside modern Beirut, popular for its cuisine, eclectic nightlife and mosaic of peoples. In Lebanon's second city, Tripoli, busy medieval souks are watched over by a vast Crusader castle. Outside

the city, snow-capped mountains and the lush Qadisha Valley with its snaking river and waterfalls provide entertainment for skiers and hikers, while the Mediterranean Sea draws sun and watersports enthusiasts. Bradt's Lebanon provides detailed cultural and practical information to this increasingly popular destination. It also provides in-depth historical and religious background enabling visitors to travel with awareness and sensitivity.

**Digital Depression** Dan Schiller, 2014-10-15 The financial crisis of 2007-08 shook the idea that advanced information and communications technologies (ICTs) as solely a source of economic rejuvenation and uplift, instead introducing the world to the once-unthinkable idea of a technological revolution wrapped inside an economic collapse. In Digital Depression, Dan Schiller delves into the ways networked systems and ICTs have transformed global capitalism during the so-called Great Recession. He focuses on capitalism's crisis tendencies to confront the contradictory matrix of a technological revolution and economic stagnation making up the current political economy and

demonstrates digital technology's central role in the global political economy. As he shows, the forces at the core of capitalism--exploitation, commodification, and inequality--are ongoing and accelerating within the networked political economy.

**Advances in Human Aspects of Transportation: Part III** Neville

Stanton, Steven Landry, Giuseppe Di Bucchianico, Andrea Vallicelli, 2022-07-19 Human Factors and Ergonomics have made a considerable contribution to the research, design, development, operation and analysis of transportation systems which includes road and rail vehicles and their complementary infrastructure, aviation and maritime transportation. This book presents recent advances in the Human Factors aspects of Transportation. These advances include accident analysis, automation of vehicles, comfort, distraction of drivers (understanding of distraction and how to avoid it), environmental concerns, in-vehicle systems design, intelligent transport systems, methodological developments, new systems and technology, observational and case studies, safety, situation awareness, skill development and training, warnings and workload. This book brings together the most recent human factors work in the transportation domain, including empirical research, human performance and other types of modeling, analysis, and development. The issues facing engineers, scientists, and other practitioners of human factors in transportation research are becoming more challenging and more critical. The common theme across these sections is that they deal with the intersection of the human and the system. Moreover, many of the chapter topics cross section boundaries, for instance by focusing on function allocation in NextGen or on the safety benefits of a tower controller tool. This is in keeping with the systemic nature of the problems facing human factors experts in rail and road, aviation and maritime research– it is becoming increasingly important to view problems not as isolated issues that can be extracted from the system environment, but as embedded issues that can only be understood as a part of an overall system.
