Monkeys and Apes Camilla De La Bédoyère, 2015-07-15 We should learn as much as we can about our closest relatives in the animal world: apes, monkeys, and other primates. Throughout this comprehensive book, readers will discover the differences and similarities among different species of primates through 100 facts grouped by topic and their accompanying fun-fact boxes, diagrams, activities, and quizzes. Beautiful photographs of these amazing animals in their native habitats, including big-eyed tarsiers clinging to trees and teeth-baring baboons displaying their aggression, aid readers in visualizing the many important zoological details.

**Chimpanzees** Rebecca Stefoff, 2004 Discusses the evolution, biology, life cycle, and social and mating and behavior of chimpanzees.

**Chimpanzees** Daniel A. Greenberg, 2001 Describes the life of chimpanzees, including social structure, reproduction and child rearing, use of tools and ability to solve problems, and loss of habitat.

**Bonobo** Frans B. M. Waal, Frans Lanting, 1997 Bonobo provides a tantalizing introduction to the natural history of one of our closest living relatives and uniquely enhances our understanding of our own place in nature (Donald Johanson). How nice to have the peaceable, sexy bonobo added to the path of human evolution! Bonobos represent the silver lining in our ape heritage (Meredith Small). 75 color plates. 9 photos. 9 maps & drawings.

*100 Animals That Can F\*cking End You* Mamadou Ndiaye, 2022-07-05 A wittily informative field guide to the deadliest animals on Earth from AnimalTok star @mndiaye\_97 Ever wonder how to tell if a moose is about to subtract you? Curious why you should be terrified of cassowaries, the “velociraptor that time forgot?” Questioning whether that cute baby hippo is actually a homicidal maniac in the making? Yea, so was Mamadou Ndiaye . . . and now he's got your answers. *100 Animals That Can F\*cking End You* is the ultimate countdown to merk by animal, featuring everything from tiny bugs that can turn you into a hashtag to animals so massive they can murder you by accident. These include: • The massive Southern elephant seal, which is built like a truck with the personality of a Spring Break frat boy • Sperm whales with a call so strong it can vibrate you to death • A golf-ball-sized octopus that can erase twenty-six people with one bite • Hyenas, which have no qualms eating their prey while it is still alive • A snake so quick it can strike you three times before you blink You'll learn not only which animals to avoid, but which ones can beat you in a footrace, which ones create surprisingly high body counts, and which ones will give you a good reason never to venture into the ocean. Mamadou also offers the occasional survival tip, even if it is just to make peace with your higher power. This dynamic, fact-filled, occasionally disturbing book is perfect for animal lovers and anyone perplexed by the natural world.

**Kanzi** Sue Savage-Rumbaugh, 1996-09-01 The remarkable story of a talking chimp, a leading scientist, and the profound insights they have uncovered about our species He has been featured in cover stories in Time, Newsweek, and National Geographic, and has been the subject of a NOVA documentary. He is directly responsible for discoveries that have forced the scientific community to recast its thinking about the nature of the mind and the origins of language. He is Kanzi, an extraordinary bonobo chimpanzee who has overturned the idea that symbolic language is unique to our species. This is the moving story of how Kanzi learned to converse with humans and the profound lessons he has taught us about our animal cousins, and ourselves. . . . The underlying thesis is informative and well argued . . . Savage-Rumbaugh's results are impressive. — The Washington Post This popular, absorbing, and controversial account is recommended. — Library Journal

Chimpanzees in Biomedical and Behavioral Research National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Institute of Medicine, Board on Health Sciences Policy, Committee on the Use of Chimpanzees in Biomedical and Behavioral Research, 2012-01-05 For

many years, experiments using chimpanzees have been instrumental in advancing scientific knowledge and have led to new medicines to prevent life-threatening and debilitating diseases. However, recent advances in alternate research tools have rendered chimpanzees largely unnecessary as research subjects. The Institute of Medicine, in collaboration with the National Research Council, conducted an in-depth analysis of the scientific necessity for chimpanzees in NIH-funded biomedical and behavioral research. The committee concludes that while the chimpanzee has been a valuable animal model in the past, most current biomedical research use of chimpanzees is not necessary, though noted that it is impossible to predict whether research on emerging or new diseases may necessitate chimpanzees in the future.

Almost Human Alfred Fidjestøl, 2020 ALMOST HUMAN tells the remarkable story of Julius the chimpanzee, born in the Kristiansand Zoo in Norway, and rejected by his mother at just six weeks old. The zoo director and his family fostered Julius with the aim of returning him to his tribe, but Julius wasn't in any rush to reconnect and the tribe repeatedly snubbed him. Despite regular attempts to reintroduce Julius to zoo life, he often returned to his human home. Julius' story soon caught the imagination of the Norwegian people and he became the star of his own TV show - the nation following his story as he grew up. Finally, after twenty-five turbulent years that saw daring escape attempts, failed relationships, rejection and injury, Julius was settled into a different chimpanzee tribe. Today, at almost forty years old, he enjoys life as a contented alpha chimpanzee with two of his own offspring. ALMOST HUMAN explores more than this unique chimpanzee's life - it examines how our treatment of animals in captivity has changed over the decades, how the mind of a chimpanzee works, and how much we have in common with the primates who share 98.6% of our DNA. This powerful story shows how Julius was faced with the very same challenges we humans experience - the need for food and safety, the desire for love and sex, how to negotiate status and power, and finding ways to deal with loneliness, sorrow and death. It reminds us that what we all require is very simple: a loving family and a place to call home.

**Can You See a Chimpanzee?** Tish Rabe, 2019-12-10 The Cat learns about primates—from marmoset monkeys to silverback gorillas—in this latest addition to the Cat in the Hat's Learning Library series! Traveling in his open-air Chimpmobile, the Cat takes Nick and Sally to Africa, Asia, and Madagascar, where they meet a barrel full of monkeys, including mandrills, marmosets, gorillas, gibbons, gallagos, tarsiers, tamarin, pottos, bonobos—you name it! Along the way they learn the basic characteristics of primates (among them hands that can grasp and forward-facing eyes); how to tell the difference between an ape and a monkey (most monkeys have tails; apes don't); and most amazingly—that people are primates, too! Fans of the hit PBS Kids show The Cat in the Hat Knows a Lot About That! (which is based on the Cat in the Hat's Learning Library) will go bananas over this latest addition to the series!

Our Inner Ape Frans de Waal, 2006-08-01 Visit the author's Web site at [www.ourinnerape.com](http://www.ourinnerape.com) It's no secret that humans and apes share a host of traits, from the tribal communities we form to our irrepressible curiosity. We have a common ancestor, scientists tell us, so it's natural that we act alike. But not all of these parallels are so appealing: the chimpanzee, for example, can be as vicious and manipulative as any human. Yet there's more to our shared primate heritage than just our violent streak. In *Our Inner Ape*, Frans de Waal, one of the world's great primatologists and a renowned expert on social behavior in apes, presents the provocative idea that our noblest qualities—generosity, kindness, altruism—are as much a part of our nature as are our baser instincts. After all, we share them with another primate: the lesser-known bonobo. As genetically similar to man as the chimpanzee, the bonobo has a temperament and a lifestyle vastly different from those of its genetic cousin. Where chimps are aggressive, territorial, and hierarchical, bonobos are gentle, loving, and erotic (sex for bonobos is as much about pleasure and social bonding as it is about reproduction). While the parallels between chimp brutality and human brutality are easy to see, de Waal suggests that the conciliatory bonobo is just as legitimate a model to study when we explore our primate heritage. He even connects humanity's desire for fairness and its morality with primate behavior, offering a view of society that contrasts markedly with the caricature people have of Darwinian evolution. It's plain that our finest qualities run deeper in our DNA than experts have previously thought. Frans de Waal has spent the last two decades studying our closest primate relations, and his observations of each species in *Our Inner Ape* encompass the spectrum of human behavior. This is an audacious book, an engrossing discourse that proposes thought-provoking and sometimes shocking connections among chimps, bonobos, and those most paradoxical of apes, human beings.

**Chimpanzee Politics** Frans B. M. Waal, 1982 Precise but eminently readable and indeed exciting... This excellent book achieves the dual goal which eludes so many writers about animal behavior -- it will both fascinate the non-specialist and be seen as an important contribution to science. -- *Times Literary Supplement*
