Blockchain and the Law Primavera De Filippi De Filippi, 2018-04-09 Since Bitcoin appeared in 2009, the digital currency has been hailed as an Internet marvel and decried as the preferred transaction vehicle for all manner of criminals. It has left nearly everyone without a computer science degree confused: Just how do you “mine” money from ones and zeros? The answer lies in a technology called blockchain, which can be used for much more than Bitcoin. A general-purpose tool for creating secure, decentralized, peer-to-peer applications, blockchain technology has been compared to the Internet itself in both form and impact. Some have said this tool may change society as we know it. Blockchains are being used to create autonomous computer programs known as “smart contracts,” to expedite payments, to create financial instruments, to organize the exchange of data and information, and to facilitate interactions between humans and machines. The technology could affect governance itself, by supporting new organizational structures that promote more democratic and participatory decision making. Primavera De Filippi and Aaron Wright acknowledge this potential and urge the law to catch up. That is because disintermediation—a blockchain’s greatest asset—subverts critical regulation. By cutting out middlemen, such as large online operators and multinational corporations, blockchains run the risk of undermining the capacity of governmental authorities to supervise activities in banking, commerce, law, and other vital areas. De Filippi and Wright welcome the new possibilities inherent in blockchains. But as *Blockchain and the Law* makes clear, the technology cannot be harnessed productively without new rules and new approaches to legal thinking.

Towards a Theory of Montage Sergei Eisenstein, 2010-06-30 I.B.Tauris is delighted to announce the reissue in paperback in three volumes of the definitive, most comprehensive edition, in the finest translations and fully annotated, of the writings of this great filmmaker, theorist and teacher of film - and one of the most original aesthetic thinkers of the twentieth century. The name of Sergei Eisenstein (1898-1948) is synonymous with the idea of montage, as exemplified in his silent classics such as *The Battleship Potemkin* (1925) and *October* (1927). In the 1930s his style changed, partly to accommodate the arrival of sound, and his ideas on audio-visual counterpoint developed. Between 1937 and 1940 he elaborated his ideas on montage in a series of essays, most of which remained unpublished until after his death and which are published in English for the first time in this volume. They present the essence of Eisenstein's thinking on cinema and aesthetics more generally and reveal him as one of the most significant philosophers of art of the twentieth century.

Mike Collins is a trainer and consultant who has been tackling these issues for years and his expert advice will save you time and money. Each section covers a specific system, providing a handy overview of its key features and benefits, including help with setup. Mike then illustrates how to convert these MIDI recordings into audio tracks to mix alongside vocals, guitars and any other real instruments. The many short tutorials provide both a source of comparison and means to get up to speed fast on any given software. Mike Collins is a music technology consultant and writer who has been making music in London's recording studios variously as a MIDI programmer, session musician, recording engineer, producer and arranger since 1981. He offers freelance Pro Tools engineering, consultancy, troubleshooting and personal tuition, as well as presenting seminars and lectures on related music technology and audio recording topics. Mike has written over 500 articles for magazines such as Macworld (UK), Pro Sound News Europe, Sound on Sound and AudioMedia, and for Electronic Musician and MIX in the USA. **Behavioral Finance: The Second Generation** Meir Statman,2019-12-02 Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

**Expanded Cinema** Gene Youngblood,2020-03-03 Fiftieth anniversary reissue of the founding media studies book that helped establish media art as a cultural category. First published in 1970, Gene Youngblood's influential Expanded Cinema was the first serious treatment of video, computers, and holography as cinematic technologies. Long considered the bible for media artists, Youngblood's insider account of 1960s counterculture and the birth of cybernetics remains a mainstay reference in today's hypermediated digital world. This fiftieth anniversary edition includes a new Introduction by the author that offers conceptual tools for understanding the sociocultural and sociopolitical realities of our present world. A unique eyewitness account of burgeoning experimental film and the birth of video art in the late 1960s, this far- ranging study traces the evolution of cinematic language to the end of fiction, drama, and realism. Vast in scope, its prescient formulations include "the paleocybernetic age," "intermedia," the "artist as design scientist," the "artist as ecologist," "synaesthetics and kinesthetics," and "the technosphere: man/machine symbiosis." Outstanding works are analyzed in detail. Methods of production are meticulously described, including interviews with artists and technologists of the period, such as Nam June Paik, Jordan Belson, Andy Warhol, Stan Brakhage, Carolee Schneemann, Stan VanDerBeek, Les Levine, and Frank Gillette. An inspiring Introduction by the celebrated polymath and designer R. Buckminster Fuller—a perfectly cut gem of countercultural thinking in itself—places Youngblood's radical observations in comprehensive perspective. Providing an unparalleled historical documentation, Expanded Cinema clarifies a chapter of countercultural history that is still not fully represented in the arthistorical record half a century later. The book will also inspire the current generation of artists working in ever-newer expansions of the cinematic environment and will prove invaluable to all who are concerned with the technologies that are reshaping the nature of human communication.
