Thomas Edwards HANKINSON

Moods of the Ohio Moons Merrill C. Gilfillan, 1991 For almost thirty years, Merrill Gilfillan has written outdoor columns devoted primarily to describing and creating moods about the world of nature. These columns are informed by a rural background and field notes from more than sixty years of outdoor experience. In Gilfillan's words, Observation is more of the mind than of vision; our attitude is the secret of original observation. I choose the subjective approach to outdoor enjoyment. I did this after training in zoology and twenty years of field work as a wildlife biologist....We should learn to seek our own original 'view' of what we observe....The scientific method is necessary to gain facts, but the manner in which one experiences the facts is what will determine their final value to the individual and, perhaps, to society. *Moods of the Ohio Moons* is the product of this subjective method of observation, balanced with scientific knowledge and intended to encourage readers to explore their own individual appreciation and understanding of nature. Twelve essays, one for each month, relate incidents and events--weather, diagnostic events, vegetation and wildlife, agriculture, trends of land use, and the wild harvest--that contribute to the mood of the time. As Gilfillan demonstrates, each month has its mood established primarily by nature and only secondarily by humans.

Rethinking Education for a Global, Transcultural World Encarna Soriano, 2015-04-01 The global networking promoted by technology, globalization and migration that are occurring at a large scale, requires school systems that develop in the students new types of skills, based on the ability to understand the world and its problems and instill a sense of responsibility and cooperation to enhance the resolution of the great problems of mankind. Rethinking education is essential in a global, transcultural, changing and communicated world. Throughout the book *Rethinking Education for a Global, Transcultural World* is argued and analyzed how to build relationships between the school and society, and the possibilities of transcending the barriers in different national contexts: Chile, Israel, Mexico, Morocco, Poland, and Spain. The main goal we want to achieve with the contributions made in the book is to know how education systems and schools in different countries respond to the social changes caused by globalization, migration and new communication technologies. The authors are professors of different scientific disciplines and different faiths, cultures and points of view, living the realities described in the chapters and thinking from these realities how to improve and how should be the education in a global, challenging and ever-changing world. We stress the importance of this book and its implications in the education of children and youth and in the preparation of teachers. For this reason, this is a book designed for teachers of primary and secondary schools, parents, principals, supervisors, university teachers who prepare school teachers, university students and those who want to know and think about education in a global and intercultural world and new forms of communication to face learning, whether at local or at world level. The mission of all is continue building education, and to facilitate this work in this book are presented contributions and recommendations of professionals around the world that will allow the reader to know, analyze, understand and appreciate the importance of education to prepare students to function with open and critical thinking in a global world. The chapters do not offer a panacea, but offer many ideas on how, through education, prepare citizens for a global and transcultural society.

The Depths Jonathan Rottenberg,2014-02-11 Nearly every depressed person is assured by doctors, well-meaning friends and family, the media, and ubiquitous advertisements that the underlying problem is a chemical imbalance. Such a simple defect should be fixable, yet despite all of the resources that have been devoted to finding a pharmacological solution, depression remains stubbornly widespread. Why are we losing this fight? In this humane and illuminating challenge to defect models of depression, psychologist Jonathan Rottenberg argues that depression is a particularly severe outgrowth of our natural capacity for emotion. In other words, it is a low mood gone haywire. Drawing on recent developments in the science of mood—and his own harrowing depressive experience as a young adult—Rottenberg explains depression in evolutionary terms, showing how its dark pull arises from adaptations that evolved to help our ancestors ensure their survival. Moods, high and low, evolved to compel us to more efficiently pursue rewards. While this worked for our ancestors, our modern environment—in which daily survival is no longer a sole focus—makes it all too easy for low mood to slide into severe, long-lasting depression. Weaving together experimental and epidemiological research, clinical observations, and the voices of individuals who have struggled with depression, *The Depths* offers a bold new account of why depression endures—and makes a strong case for destigmatizing this increasingly common condition. In so doing, Rottenberg offers hope in the form of his own and other patients' recovery, and points the way towards new paths for treatment.

The Art of Somatic Coaching Richard Strozzi-Heckler,2014-02-11 The Art of Somatic Coaching introduces the concepts and principles of coaching

with practices that include body awareness, bodywork, and mindfulness for both the coach and the client. Author and expert coach, Richard Strozzi-Heckler, PhD, explains that in order to achieve truly sustainable changes in individuals, teams, and organizations, it is necessary to implement body-oriented somatic practices in order to dissolve habits, behaviors, and interpretations of the world that are no longer relevant. He explains that these ways of being are integrated in the body--at the level of the musculature, organs, and nervous system. By implementing a somatic approach, these patterns can be shifted in order for transformation to occur. Opening with a discussion of the roots of Somatic Coaching, the book describes the emotional and physical cost of being distanced from our bodies. Originating from the rationalistic idea that the mind and body are separate, this sense of disconnection spurred the emergence of the field of somatics that views the body as not just a physiological entity, but as the center of our lived experience in the world. Out of this philosophy, Somatic Coaching was developed as a way to cultivate the self through the body. Methods in this book include: • Somatic awareness--becoming aware of sensations • Somatic opening--includes bodywork to release held patterns in the body • Somatic practices--meditation, movement, and being present in everyday life The social context in which one is raised, the supportive, healing force of the outdoors and nature as well as acknowledgment of the spirit are also woven into the practice. Through these practices, a rhythm of unfolding occurs in what Strozzi-Heckler describes as an Arc of Transformation--moving in stages from conditioned tendencies to a new satisfying and fulfilling way of being that is fully embodied. Contents: Introduction; Chapter One: A Short Distance but a Big Cost; Chapter Two: Coaching; Chapter Three: Somatics and Somatic Coaching; Chapter Four: The Methodology; Chapter Five: The Rhythm of Action; Chapter Six: The Somatic Arc of Transformation

Appendices include a short bibliography, detailed definitions of all examples discussed in the text, a list of all notations used, and an index. Model-Based Systems Engineering is an excellent text for engineering students, and an invaluable reference for engineers and scientists.

Holistic Perspectives on Trauma Lisa Albers Prock,2015-04-01 Children with a history of significant neglect and/or physical, sexual, and/or emotional abuse are at higher risk for developing long-term emotional, behavioral, and mental health concerns, which have implications past childhood and into adulthood. Early trauma impacts individuals' health in ways that reach far past the obvious and immediate damage. It correlates with higher incidences of various mental health disorders, it can alter brain structures, and it can make individuals more susceptible to a variety of diseases, including cancer, cardiovascular disorders, fibromyalgia, and diabetes, among others. The research collected in this compendium offers vital guideposts to professionals across a wide spectrum of disciplines. It provides a foundation for ongoing research into this area of study, which is so vital for the well-being of our children and their futures. Understanding the long-term effects of childhood trauma is now integral to the daily clinical practice of professionals from many fields, including educators, social workers, mental health professionals, family and substance abuse counselors, police, caregivers, and criminal justice service providers. The boundaries between social workers and other professionals are blurred or nonexistent. This insightful book provides a nuanced look at the outcomes of childhood trauma and provides a greater understanding to help build more effective cross-disciplinary intervention strategies.
