Death Is Now My Neighbor Colin Dexter,2011-07-13 “Another deviously construction Inspector Morse mystery from the masterly hand of Colin Dexter.”—The New York Times Book Review Why would a sniper shoot suburban physiotherapist Rachel James as she sips her morning coffee? Inspector Morse's hunt for answers kicks off with a tabloid journalist, winds through the strip clubs of Soho, then returns to Oxford, where two senior dons and their wives battle for a plum promotion. Then, on the personal front, Inspector Morse receives intimations of his own mortality. And while Morse muses on life, he reveals his first name at last. . . . Praise for *Death Is Now My Neighbor* “An excellent writer . . . Dexter's mysteries featuring Inspector Morse just keep getting better.”—Associated Press “His best work yet, full of insight into human nature and rich with real emotion.”—The Christian Science Monitor “A brilliant tour de force, an ingenious exploration of the human heart . . . At once sensitive, profoundly wise, and deeply felt.”—Buffalo News

Morse Theory and Floer Homology Michèle Audin,Mihai Damian,2013-11-29 This book is an introduction to modern methods of symplectic topology. It is devoted to explaining the solution of an important problem originating from classical mechanics: the 'Arnold conjecture', which asserts that the number of 1-periodic trajectories of a non-degenerate Hamiltonian system is bounded below by the dimension of the homology of the underlying manifold. The first part is a thorough introduction to Morse theory, a fundamental tool of differential topology. It defines the Morse complex and the Morse homology, and develops some of their applications. Morse homology also serves a simple model for Floer homology, which is covered in the second part. Floer homology is an infinite-dimensional analogue of Morse homology. Its involvement has been crucial in the recent achievements in symplectic geometry and in particular in the proof of the Arnold conjecture. The building blocks of Floer homology are more intricate and imply the use of more sophisticated analytical methods, all of which are explained in this second part. The three appendices present a few prerequisites in differential geometry, algebraic topology and analysis. The book originated in a graduate course given at Strasbourg University, and contains a large range of figures and exercises. Morse Theory and Floer Homology will be particularly helpful for graduate and postgraduate students.
