Calculator Mathematics for the Real Estate Professional Lawrence R.

Rosen, 1978 Calculator Mathematics for the Real Estate Professional has two objectives: 1) to show you how to correctly answer the mathematics questions on a real estate licensing examination for salespersons or brokers; 2) to be a time-saving reference for real estate professionals, investors, tenants, accountants, lenders, and attorneys. Even those who are capable of performing complex mathematical computations will welcome the practicality of having the formulas and methods contained in one easy-to-use reference and will benefit from the short-cut, time-saving techniques described, including—how to determine in seconds (without handbooks or tables) the monthly payment on a mortgage loan, the outstanding loan balance at any particular point in time, or the interest portion of mortgage payments for a given year. The first ten chapters explain the various computations one will encounter in licensing examinations and everyday practice. The last three chapters describe how to use a pocket calculator to quickly solve these computations, and provide the method of solving more complex and advanced problems such as: computation of the area of unusually shaped land areas and the various calculations related to 'balloon mortgages. Examples are given for an algebraic language calculator and a reverse Polish calculator as well as for a basic four function model. Real estate practitioners who master the time-saving skills explained will increase their productivity, listings, commissions, and professionalism.

Can We Avoid Another Financial Crisis? Steve Keen, 2017-05-09 The Great Financial Crash had cataclysmic effects on the global economy, and took conventional economists completely by surprise. Many leading commentators declared shortly before the crisis that the magical recipe for eternal stability had been found. Less than a year later, the biggest economic crisis since the Great Depression erupted. In this explosive book, Steve Keen, one of the very few economists who anticipated the crash, shows why the self-declared experts were wrong and how ever-rising levels of private debt make another financial crisis almost inevitable unless politicians tackle the real

dynamics causing financial instability. He also identifies the economies that have become 'The Walking Dead of Debt', and those that are next in line – including Australia, Belgium, China, Canada and South Korea. A major intervention by a fearlessly iconoclastic figure, this book is essential reading for anyone who wants to understand the true nature of the global economic system.
