**Italian Crafts** Janet D’Amato, Alex D’Amato, 2014-07-28 The folk artists of Italy have created

some of the most beautiful crafts in the world: laces, mosaics, leatherwork, quilting, and wood inlay are among the most well-known. In this vintage book, originally published in 1977, Janet and Alex D'Amato explore these traditional Italian crafts as well as others not so well known, such as tambour (a kind of crocheting worked directly into a fabric), straw marquetry (a mosaic-like craft done with tiny pieces of straw), wood carving and quillwork. They explain each craft as it was originally practiced, then adapt it to make contemporary craft pieces. The projects include an embroidered full length apron, a bobbin lace wall hanging, a straw marquetry box, jewelry, and many more. Also included are instructions for a Presepio (a traditional Italian manger scene) and a Pinocchio marionette. Italian Crafts will teach you the traditional folk arts of Italy, and will inspire you to use those folk arts in new and creative ways. There are line drawings and photographs throughout this unique book.

Finite Model Theory and Its Applications Erich Grädel, Phokion G. Kolaitis, Leonid Libkin, Maarten Marx, Joel Spencer, Moshe Y. Vardi, Yde Venema, Scott Weinstein, 2007-06-04 Finite model theory, as understood here, is an area of mathematical logic that has developed in close connection with applications to computer science, in particular the theory of computational complexity and database theory. One of the fundamental insights of mathematical logic is that our understanding of mathematical phenomena is enriched by elevating the languages we use to describe mathematical structures to objects of explicit study. If mathematics is the science of patterns, then the media through which we discern patterns, as well as the structures in which we discern them, command our attention. It is this aspect of logic which is most prominent in model theory, "the branch of mathematical logic which deals with the relation between a formal language and its interpretations". No wonder,

then, that mathematical logic, and finite model theory in particular, should find manifold applications in computer science: from specifying programs to querying databases, computer science is rife with phenomena whose understanding requires close attention to the interaction between language and structure. This volume gives a broad overview of some central themes of finite model theory: expressive power, descriptive complexity, and zero-one laws, together with selected applications to database theory and artificial intelligence, especially constraint databases and constraint satisfaction problems. The final chapter provides a concise modern introduction to modal logic, which emphasizes the continuity in spirit and technique with finite model theory.

Handbook of Modal Logic Patrick Blackburn, Johan F.A.K. van Benthem, Frank Wolter, 2006-11-03  
The Handbook of Modal Logic contains 20 articles, which collectively introduce contemporary modal logic, survey current research, and indicate the way in which the field is developing. The articles survey the field from a wide variety of perspectives: the underlying theory is explored in depth, modern computational approaches are treated, and six major applications areas of modal logic (in Mathematics, Computer Science, Artificial Intelligence, Linguistics, Game Theory, and Philosophy) are surveyed. The book contains both well-written expository articles, suitable for beginners approaching the subject for the first time, and advanced articles, which will help those already familiar with the field to deepen their expertise. **Mosaic** Jeri Taylor, 2012-12-11 Mosaic tells the life story of Captain Janeway, a compelling tale of personal bravery, personal loyalty, tragedy and triumph. As told by Jeri Taylor, co-creator and

executive producer of Star Trek: Voyager, this is an in-depth look into the mind and soul of Star Trek's newest captain. Deep in the unexplored reaches of the Delta Quadrant, a surprise attack by a fierce Kazon sect leaves Captain Janeway fighting a desperate battle on two fronts: while she duels the Kazon warship in the gaseous mists of a murky nebula, an Away Team led by Lt. Tuvok is trapped on the surface of a wilderness planet -- and stalked by superior Kazon ground forces. Forced to choose between the lives of the Away Team and the safety of her ship, Captain Janeway reviews the most important moments of her life, and the pivotal choices that made her the woman she is today. From her childhood to her time at Starfleet Academy™, from her first love to her first command, she must once again face the challenges and conflicts that have brought her to the point where she must now risk everything to put one more piece in the mosaic that is Kathryn Janeway.

Scientific Detectors for Astronomy 2005 Jenna E. Beletic, James W. Beletic, Paola Amico, 2006-09-14  
The 2005 meeting in Taormina, Italy was attended by 127 professionals who develop and use the highest quality detectors for wavelengths from x-ray to sub-mm, with emphasis on optical and infrared detectors. The meeting consisted of overview talks, technical presentations, poster sessions and roundtable discussions. These proceedings capture the technical content and the spirit of the 2005 workshop. The 87 papers cover a wide range of detector technologies including CCDs, CMOS, APDs, and sub-mm detectors. There are papers on observatory status and plans, special applications, detector testing and characterization, and electronics. A special feature of these proceedings is the inclusion of pedagogical overview papers, which were written by teams of leading experts from different institutions. These proceedings are appropriate for a range of expertise levels, from undergraduates to professionals working in the field. The information presented in this book will serve as a valuable reference for many years to come. This workshop was organized by the Scientific

Workshop Factory, Inc. and the INAF- Osservatorio Astrofisico di Catania.
