Peter Williams Designed To Race Peter

Williams, 2012-10-14 On his day, Peter Williams was the best motorcycle road racer in the world and is one of that small band of sportsmen, 'the best never to win a World Championship'. Peter's unique career in the 1960s and 1970s as racer, designer and development engineer culminated in many great victories on bikes from 125cc to 750cc. For two months in 1967 he led the 500cc class of the World Championship on his single cylinder 500cc Mkl Arter Matchless Special against the much more powerful Honda and MV Augusta multis of Mike Hailwood and Giacomo Agostini. Just when he was, perhaps, due for a 'works' ride, the Japanese withdrew from Grand Prix road racing and Peter joined the re-emergent manufacturers of Norton. Peter had two consuming passions; riding his motorcycles at 10/10ths of the limit, and for Britain to regain motorcycle supremacy. Indeed, the latter was his mission, his crusade, and so he rode almost exclusively British motorcycles but, interestingly, won his only Grand Prix on a foreign one. Peter's engineering designs gave him advantage on the race track and set the trends for what motorcycles are today. He was one of the first to design and race with disc brakes, the first in the world to design and use cast magnesium wheels and tubeless tyres. Peter won the 1970 500cc class British Championship and was the first

in motorcycle racing to benefit from tobacco sponsorship. The 1973 John Player Norton 'Monocoque' incorporated all his previous experiments and the first twin spar frame. The pinnacle of his career came on this machine when he won the Formula 750 TT in the Isle of Man with record race and lap speeds. Peter's racing career came to an end in 1974 with a terrible crash at Oulton Park but his engineering continued with work at Cosworth Engineering and Lotus Engineering. Motorcycle innovation continues, too, with his true monocoque design, his Shell Chassis, which, in its electric drive form, finished 5th in its very first outing in the 2010 TT Zero.

Sylvie and Me Steve Male, 2020-04-29 I was approaching way too fast, with no time to stop. I didn't even try; I simply let Sylvie charge into the gravel full tilt, coming to a remarkably fast stop. Half a dozen marshals stared at me wide-eyed. I watched their arms raise as I sunk into the welcoming stones. With the wheels buried axle-deep, I lost my balance and keeled over, Sylvie resting on top of me. I flicked the kill switch and everything went quiet. *Sylvie And Me* is the dramatic, humorous and candid memoir of a fool who always wanted to race. At the age of fifty-six and a half, Steve Male decided it was a good time to start motorcycle racing. With no real experience, he bought an old Suzuki SV650, got his licence and joined the local racing club with some very modest goals: 1. Enter one race meeting. 2. Take part in at least one race. 3. Complete at least one race. 4. Don't crash. 5. Don't finish last. 6. Don't die trying. Armed with nothing but over-optimism and an ageing bike, he entered the 2019 Bemsee Rookie Minitwin Championship, hoping to scratch a 40-year-old itch. Not only did he do that but he managed to squeeze a lifetime's worth of experiences into six short weekends. Follow his progress from wannabe to race licence holder. Share the highs, the lows and the dangers he witnessed, proving that

even someone as poorly prepared as he was could still come out the other side and say, I am a racer. Steve Male is a middle-aged father of two and obsessive motorcycle fan. Inheriting his father's enthusiasm, he has owned bikes since he was 14. He rekindled an interest in bike racing in his forties, supporting a number of young racers via his GP Future website. He lives with the ever-patient Cheryl and their two dogs in East Sussex but his heart belongs to the race track. Or so he thinks.

Cafe Racer: Beginner Guide of Racing Bike Building (Custom Bike, Bike Touring, Bike Riding, Cafe Racer Bike, Cafe Racer Motorcycle Perry

Anderson, 2019-03 Cafe Racer A café racer is a bike that has been modified to race from a café to some different predetermined place. The maximum famous café (stated caff) became the Ace Café in London. Legend has it that motorcycle riders would race from the café, after choosing a sure record at the duke box, and go back before the record finished. This feat frequently necessitated achieving 'the ton' or a hundred mph. In England all through the 60s, low-cost motorcycles that would achieve the ton, were few and a ways among. For the common worker and motorbike owner, the most effective choice of getting the desired performance become to track the motorcycle with diverse racing options. effectively available tuning elements made the task simpler. Riders would upload extra elements as their budgets allowed. As riders delivered more and more elements, a popular look started to materialize - the café racer look. The standard specification of an early café racer might be: Swept-lower back pipes Clip-on's or 'Ace' bars everse cone Mega's (quick for megaphone mufflers - very a great deal a misnomer). Later motorcycles used Dunstall's, which have been silencers produced via tuning legend Paul Dunstall TT100 Dunlop tires Large carburetors Rear sets For many riders, having the café racer appearance turned into sufficient. but while the market for tuning parts absolutely started out to take off inside the mid '60s, the list of available and suitable components grew. except engine tuning parts, some of companies began to provide substitute seats and tanks. those replacements resembled the current trends in motorbike racing: seats with humps,

and fiberglass tanks with indentations to clean clip-ons and the rider's knees. more high priced aluminum versions have been additionally available. Engine Design Concepts for World Championship Grand Prix Motorcycles Alberto Boretti, 2012-08-06 The World Championship Grand Prix (WCGP) is the premier championship event of motorcycle road racing. The WCGP was established in 1949 by the sport's governing body, the Fédération Internationale de Motocyclisme (FIM), and is the oldest world championship event in the motorsports arena. This book, developed especially for racing enthusiasts by motorsports engineering expert Dr. Alberto Boretti, provides a broad view of WCGP motorcycle racing and vehicles, but is primarily focused on the design of four-stroke engines for the MotoGP class. The book opens with general background on MotoGP governing bodies and a history of the event's classes since the competition began in 1949. It then presents some of the key engines that have been developed and used for the competition through the years. Technologies that are used in today's MotoGP engines are discussed. A sidebar discussion on calculating brake, indicated, and friction performance parameters provides mathematical information for readers who like such technical details. Future developments of MotoGP engines, including the use of biofuels and recovery of thermal and braking energy, are presented. The introduction concludes

with a chart that details the winners of the various classes of WCGP motorcycle racing since the competition began in 1949. The bulk of the book consists of four previously published SAE technical papers that were expressly chosen by Dr. Boretti to provide greater insight to the relationships between engine parameters and performance, namely the influence on friction and mean effective pressure of traditional spark ignited four stroke engines tuned for a narrow high power output. The first paper provides the reader with a quick way to estimate the friction loss and engine output. The second paper discusses output and fuel consumption of multi-valve motorcycle engines. The third paper, published in 2002, compares WCGP engines developed to comply with the then-new FIM regulations that allowed four-stroke engines in the competition. The fourth paper examines specific power densities and therefore the level of sophistication and costs of MotoGP 800 cm³ engines. This paper shows the performance of these as well as the 1000cc SuperBike engines. The fifth paper presents four engine concepts including one for a MotoGP/Superbike with 2 and 3 cylinders. The sixth paper compares 3 and 4 in-line, V4, V5, and V6 layouts through 1-D engine simulations. The seventh paper considers the actual operation of 800cc MotoGP engines on the race track, where the percentage of the duration in fully open throttle is less than 20% of the race, but the partial throttle is used for as much as 80% of the race. The final paper in the compendium reports on the Honda oval piston engine concept.

Features of Race Track Design Ed Bargy, 2014-10-03
This book was written by Ed Bargy with well over five decades experience in the motor racing field. Ed's first exposure to the race track was NASCAR dirt oval racing in upstate NY at the age of 9. Ed started motorcycle road racing in the sixties while stationed in the UK with the USAF. Ed has gone on to hold every position in the motorcycle road racing sport from a national level racer to senior national race official, race promoter and racing school founder/owner. Ed has seen firsthand what works and what does not work on the race track. Most road courses of today were primarily designed for automobile racing. The needs of the motorcycle road racer are seldom taken into account. A track can be designed to be totally safe for autos and still be extremely deadly for bike riders. Where, if a track is designed to be safe for bikes, it will also be totally safe for

cars.
