**A Guide to Motorcycle Racing** Hedley J. Cox, 2015-05-14 United States motorcycle enthusiasts can learn a lot by looking to their peers in Europe, which has as rich a history as they do. Hedley J. Cox was living in England when he became involved in racing in the early 1950s. An engineer of the first order, he raced and designed machines and traveled with a team to International Grand Prix meetings in Europe. In this behind-the-scenes look at the world of motorcycle racing, you'll learn the answers to questions such as: How does management politics affect racing? Why did British motorcycle manufacturers lose the spirit of adventure that is so necessary in racing? What happened when that sense of adventure was lost? He also examines the state of racing in the Canada, where he raced for a big manufacturer after moving to the United States. At every turn and curve, he encouraged others to embrace new ideas to beat competitors. Join the author on a fascinating journey that spans thousands of miles with three different manufacturers with *A Guide to Motorcycle Racing*.

**Peter Williams Designed To Race** Peter Williams, 2012-10-14 On his day, Peter Williams was the best motorcycle road racer in the world and is one of that small band of sportsmen, 'the best never to win a World Championship'. Peter's unique career in the 1960s and 1970s as racer, designer and development engineer culminated in many great victories on bikes from 125cc to 750cc. For two months in 1967 he led the 500cc class of the World Championship on his single cylinder 500cc MkI Arter Matchless Special against the much more powerful Honda and MV Augusta multis of Mike Hailwood and Giacomo Agostini. Just when he was, perhaps,

due for a 'works' ride, the Japanese withdrew from Grand Prix road racing and Peter joined the re-emergent manufacturers of Norton. Peter had two consuming passions; riding his motorcycles at 10/10ths of the limit, and for Britain to regain motorcycle supremacy. Indeed, the latter was his mission, his crusade, and so he rode almost exclusively British motorcycles but, interestingly, won his only Grand Prix on a foreign one. Peter's engineering designs gave him advantage on the race track and set the trends for what motorcycles are today. He was one of the first to design and race with disc brakes, the first in the world to design and use cast magnesium wheels and tubeless tyres. Peter won the 1970 500cc class British Championship and was the first in motorcycle racing to benefit from tobacco sponsorship. The 1973 John Player Norton 'Monocoque' incorporated all his previous experiments and the first twin spar frame. The pinnacle of his career came on this machine when he won the Formula 750 TT in the Isle of Man with record race and lap speeds. Peter's racing career came to an end in 1974 with a terrible crash at Oulton Park but his engineering continued with work at Cosworth Engineering and Lotus Engineering. Motorcycle innovation continues, too, with his true monocoque design, his Shell Chassis, which, in its electric drive form, finished 5th in its very first outing in the 2010 TT Zero.

*Superfast Motorcycle Racing* Janet Slingerland, 2020-01-01 Start your engines and get ready to learn all about the exciting world of motorcycle racing! Readers will be turning the pages to discover the history of motorcycle racing, what a typical race day looks like, and more about the sport.

**The World's Fastest Motorcycles** Ashley P. Watson Norris, 2016-08 In a top-ten format presents the worlds fastest motorcycles-- Provided by publisher.

Grand Prix Motorcycle Racers Norm DeWitt, 2010-09-16 Until the 1970s, North America was considered a backwater with respect to world championship-level motorcycle road racing. European racers viewed American riders as being less talented and rode around in circles on tracks made of dirt. That all changed when Kenny Roberts exploded onto the Grand Prix racing scene and became the first American to win the world championship in motorcycle road racing's premier class. Roberts' success launched an era of American dominance that lasted for nearly 20 years and still echoes through the annals of the sport. This is the story of the legendary American riders who beat the Europeans at their own game, including Freddie Spencer, Eddie Lawson, Wayne Rainey, Kevin Schwantz, Kenny Roberts Jr., and the most recent American world champion, Nicky Hayden. With additional chapters about the American World Superbike champions and those Americans who competed for the World Championship, this is the story road racing fans have been waiting decades to read.

Racing is tough, but with dedication, practice, and patience, anyone can become a dirt bike racer. Color photographs, a glossary, and exciting fact boxes will get your students ready to race.

**Engine Design Concepts for World Championship Grand Prix Motorcycles** Alberto Boretti,2012-08-06 The World Championship Grand Prix (WCGP) is the premier championship event of motorcycle road racing. The WCGP was established in 1949 by the sport's governing body, the Fédération Internationale de Motocyclisme (FIM), and is the oldest world championship event in the motorsports arena. This book, developed especially for racing enthusiasts by motorsports engineering expert Dr. Alberto Boretti, provides a broad view of WCGP motorcycle racing and vehicles, but is primarily focused on the design of four-stroke engines for the MotoGP class. The book opens with general background on MotoGP governing bodies and a history of the event's classes since the competition began in 1949. It then presents some of the key engines that have been developed and used for the competition through the years. Technologies that are used in today's MotoGP engines are discussed. A sidebar discussion on calculating brake, indicated, and friction performance parameters provides mathematical information for readers who like such technical details. Future developments of MotoGP engines, including the use of biofuels and recovery of thermal and braking energy, are presented. The introduction concludes with a chart that details the winners of the various classes of WCGP motorcycle racing since the competition began in 1949. The bulk of the book consists of four previously published SAE technical papers that were expressly chosen by Dr. Boretti to provide greater insight to the relationships between engine parameters and performance, namely the influence on friction and mean effective pressure of traditional spark ignited four stroke engines tuned for a narrow high power output. The first paper provides the reader with a quick way to estimate the friction loss and engine output. The second paper discusses output and fuel consumption of multi-valve motorcycle engines. The third paper, published in 2002, compares WCGP engines developed to comply with the then-new FIM regulations that allowed four-stroke engines in the competition. The fourth paper examines specific power densities and therefore the level of sophistication and costs of MotoGP 800 cm<sup>3</sup> engines. This paper shows the performance of these as well as the 1000cc SuperBike engines. The fifth paper presents four engine concepts including one for a MotoGP/Superbike with 2 and 3 cylinders. The sixth paper compares 3 and 4 in-line, V4, V5, and V6 layouts through 1-D engine simulations. The seventh paper considers the actual operation of 800cc MotoGP engines on the race track, where the percentage of the duration in fully open throttle is less than 20% of the race, but the partial throttle is used for as much as 80% of the race. The final paper in the compendium reports on the Honda oval piston engine concept.
