The Complete Guide to Olympus' E-M5 II (B&W Edition) Gary L. Friedman,Tony Phillips,2015-04-24 The OM-D E-M5 II is a tiny camera camera that implements sensor-shifting in order to achieve a whopping 40 megapixels out of it's outstanding Micro Four-Thirds sensor! Its engineers also gave it one of the most customizable and nuanced user interfaces ever. While a good move, even experienced users will sometimes need help getting their arms around all of the different permutations of features or groups of features spread across different menus. In this detailed and easy-to-read reference, professional photographers Gary L. Friedman and Tony Philips simplify the complexity and provides the shortest learning curve for this infinitely-configurable camera. Also included is a set of Cliffs Notes cards you can print showing the recipes for common shooting situations, and the author's Personal Camera Settings. THIS VERSION OF THE BOOK IS IN B&W. Color versions and other formats (including sample pages) are available at the author's website.

The 3D Stereotaxic Brain Atlas of the Degu Noriko Kumazawa-Manita,Tsutomu Hashikawa,Atsushi Iriki,2018-10-08 This book is the first digital atlas of the degu brain with microscopic features simultaneously in Nissl sections and magnetic resonance imaging (MRI). As an experimental animal model, the degu contributes to a variety of medical research fields in diabetes, hyperglycemia, pancreatic function, and adaptation to high altitude, among others. Recently the degu has gained increasing importance in the field of neuroscience, particularly in studies evaluating the relationship between sociality and cognitive brain functions, and in studies pertaining to the evolutionary aspects of the acquisition of tool-use abilities. Furthermore, aging-related brain dysfunction in humans can be studied using this animal model in addition to mammals with much longer lifespans. This brain atlas is constructed to provide histological and volume-rendered information simultaneously, fitting with any spatial coordination in brain positioning. It can be a useful guide to degus as well as to other rodents for studies of brain structures conducted using MRI or other contemporary examination methods with volume-rendering functions.

Macro Photography Don Komarechka,2021-05-07 Step into a world of photography that most artists consider magical. The closer you get to things, the more fascinating they become. Unimaginable details can be captured with the aid of special photography techniques and equipment, detailed at length within these pages. Macro photographers play by a different rulebook. The challenges faced from the subject matter, the equipment and even the laws of physics make this an ambitious genre of photography. It can be abstract, it can tell stories, and it can spark your imagination. Author and "Mad Scientist" photographer Don Komarechka covers every area of macro photography, from simple beginnings and tips to help you get the most out of your first macro lens, all the way through a masterclass in the obscure. Topics include: - Redefining the rules of composition - Finding and exploring narratives we ignore - The challenges of magnification - Camera equipment choices and recommendations - Inexpensive ways to get "closer" - Controlling and sculpting light - Overcoming shallow focus - Using water droplets as lenses for enchanted refractions - The art of photographic discovery: "what if?" - Winter macro: snowflakes and freezing soap bubbles - Ultraviolet fluorescence macro - Stereoscopic 3D macro photography - MANY more topics down the rabbit hole

Virtual Worlds Jean-Claude Heudin,2003-05-20 1 Introduction Imagine a virtual world with

digital creatures that look like real life, sound like real life, and even feel like real life. Imagine a virtual world not only with nice three dimensional graphics and animations, but also with realistic physical laws and forces. This virtual world could be familiar, reproducing some parts of our reality, or unfamiliar, with strange "physical" laws and artificial life forms. As a researcher interested in the sciences of complexity, the idea of a conference about virtual worlds emerged from frustration. In the last few years, there has been an increasing interest in the design of artificial environments using image synthesis and virtual reality. The emergence of industry standards such as VRML [1] is an illustration of this growing interest. At the same time, the field of Artificial Life has addressed and modeled complex phenomena such as self organization, reproduction, development, and evolution of artificial life like systems [2]. One of the most popular works in this field has been *Tierra* designed by Tom Ray: an environment producing synthetic organisms based on a computer metaphor of organic life in which CPU time is the "energy" resource and memory is the "material" resource [3]. Memory is organized into informational patterns that exploit CPU time for self replication. Mutation generates new forms, and evolution proceeds by natural selection as different creatures compete for CPU time and memory space.

A Village Lost and Found Elena Vidal Brian May, Elena Vidal, 2009-10-22 An Annotated Tour of the 1850s series of Stereo Photographs Scenes in our Village by T.R. Williams This book is the perfect antidote to the stress of life in the 21st Century. It portrays the idyll of life in an 1850s village, far from the sound of the train's whistle. The identity of the village was lost to the world for 150 years, and only by a miracle does this magical set of stereoscopic views survive, brought together for the very first time by Brian May and his co-author, photohistorian Elena Vidal. Their research is amazingly in-depth, but the book is utterly readable, and the pictures leap into glorious 3-D, viewed in the new focussing stereoscope which May has designed and produced, to bring the stereos to life, and then fold neatly into the slip-case of the book. The book gives an extraordinary insight into everyday village life at the time - with a woman at her spinning wheel, the blacksmith outside his smithy, three men at the grind stone sharpening a tool, the villagers in the fields, bringing in the harvest as well as often taking time to enjoy a good gossip. In every case the original verse which accompanied the view is reproduced. In addition, May and Vidal have researched and annotated all the views, revealing another layer of meaning, by exploring the history of these real characters, this idyllic village and its links with the present day. The result is a powerfully atmospheric and touching set of photographs. *A Village Lost and Found* brings master pioneering stereographer T. R. Williams's passionate life-work *Scenes in Our Village* to a new audience - in glorious 3-D, as never before. For an Electronic Press Kit for *A Village Lost and Found* click here

Operations Research Proceedings 2010 Bo Hu, Karl Morasch, Stefan Pickl, Markus

Siegle, 2011-06-24 This book contains selected papers from the symposium Operations Research 2010 which was held from September 1-3, 2010 at the Universität der Bundeswehr München, Germany. The international conference, which also serves as the annual meeting of the German Operations Research Society (GOR), attracted more than 600 participants from more than thirty countries. The general theme Mastering Complexity focusses on a natural component of the globalization process. Financial markets, traffic systems, network topologies and, last but not least, energy resource management, all contain complex behaviour and economic interdependencies which necessitate a scientific solution. Operations Research is one of the key instruments to model, simulate and analyze such systems. In the process of developing optimal solutions, suitable heuristics and efficient procedures are some of the challenges which are discussed in this volume.
