The Legend of Mt White Station Gerald Sandrey,2015 The diverse and desolate country that makes up Mt White Station has held an irresistible allure for men for decades. Many have committed themselves to the extreme weather and isolation of the place only to finally admit defeat, while others have endured, raising families and forming bonds with their fellow station workers and the land itself. From the Riversdale flats to the Puketeraki and Dampier ranges on the Lochinvar estate in the Upper Waimakariri catchment, Mt White has been one of the most successful operating stations since the Long Depression of the 1880s. The Turnbull family, who live 200 kilometres away from the station, have owned Mt White for almost 100 years. The key to their success has no doubt been the careful appointment of skilled managers made of the right stuff to handle this volatile and isolated terrain. From the managers, musterers, shepherds, shearers, packmen, fencers, deer-cullers, cooks, cowboys and the wives and children who have worked and lived there, Mt White has certainly attracted its share of colourful characters and high country legends. This book pays homage to them and to the rugged and beautiful landscape of Mt White station.—Back cover. Applied Simulation and Optimization 2 Miguel Mujica Mota, Idalia Flores De La Mota, 2017-05-18 Building on the author's earlier Applied Simulation and Optimization, this book presents novel methods for solving problems in industry, based on hybrid simulation-optimization approaches that combine the advantages of both paradigms. The book serves as a comprehensive guide to tackling scheduling, routing problems, resource allocations and other issues in industrial environments, the service industry, production processes, or supply chains and aviation. Logistics, manufacturing and operational problems can either be modelled using optimization techniques or approaches based on

simulation methodologies. Optimization techniques have the advantage of performing efficiently when the problems are properly defined, but they are often developed through rigid representations that do not include or accurately represent the stochasticity inherent in real systems. Furthermore, important information is lost during the abstraction process to fit each problem into the optimization technique. On the other hand, simulation approaches possess high description levels, but the optimization is generally performed through sampling of all the possible configurations of the system. The methods explored in this book are of use to researchers and practising engineers in fields ranging from supply chains to the aviation industry.

Adaptivität und semantische Interoperabilität von Manufacturing Execution Systemen (MES) Miriam Schleipen, 2014-05-22 MES (Manufacturing Execution Systems) sind zwischen der Automatisierungs- und der Unternehmensleitebene von Änderungen in der Produktion betroffen. Darum ist ihre Adaptivität im Lebenszyklus der Produktionsanlagen erfolgskritisch. Zusätzlich agieren MES als Daten- und Informationsdrehscheibe. Daher müssen sie möglichst gut und nahtlos mit anderen Systemen zusammenarbeiten: MES müssen interoperabel werden und dabei die Semantik im Griff haben. Die vorliegende Arbeit begegnet beiden Aspekten.
