Toys in the Age of Wonder Mark Rich,2020-09-09 By the middle 1800s, toys were appearing in forms that drew upon--and that inspired--advances in areas such as optics, biology, geography, transportation, and automation. In these decades, too, a new type of wonder tale was being brought to maturity by a Poe-inspired Jules Verne. The modern wonder tale's highly-charged vision expressed the hopes and the fears, and the delights and the traumas, engendered by new worlds idealism--that Western pursuit of both mechanical and geographical conquest. Exploring realms belonging to childhood, literature, science, and history, this innovative study weaves together the histories of wonder tales and children's toys, focusing specifically on their modern aspects and how they reflect and express the social attitudes of that time period beginning around 1859 and ending around 1957.

The Human Motor Anson Rabinbach,1992-01-08 Masterfully integrating Europe-wide debates in science, philosophy, technology, economics, and social policy, Rabinbach has provided us with a profoundly original understanding of the productivist obsessions from which we are still painfully freeing ourselves. . . . A splendid example of the mutual enrichment of intellectual and social history. It goes well beyond its central concern with the 'science of work' to illuminate everything it discusses, from Marxism to the social uses of photography, from cultural decadence to the impact of the First World War.—Martin Jay, University of California, Berkeley

Experimental Ethnography Catherine Russell,1999 A sophisticated theoretical consideration of the related aesthetics and histories of ethnographic and experimental non-fiction films.

Pulses of Abstraction Andrew R. Johnston, 2021-01-12 Reshapes the history of abstract animation and its importance to computer imagery and cinema Animation and technology are always changing with one another. From hand-drawn flipbooks to stop-motion and computer-generated imagery (CGI), animation's identity is in flux. But many of these moving image technologies, like CGI, emerged from the world of animation. Indeed, animation has made essential contributions to not only computer imagery but also cinema, helping shape them into the fields and media forms we know today. In Pulses of Abstraction, Andrew R. Johnston presents both a revealing history of abstract animation and an investigation into the relationship between animation and cinema. Examining a rich array of techniques—including etching directly onto the filmstrip, immersive colored-light spectacles, rapid montage sequences, and digital programming—Pulses of Abstraction uncovers important epistemological shifts around film and related media. Just as animation's images pulse in projection, so too does its history of indexing technological and epistemic changes through experiments with form, material, and aesthetics. Focusing on a period of rapid media change from the 1950s to the 1970s, this book combines close readings of experimental animations with in-depth technological studies, revealing how animation helped image culture come to terms with the rise of information technologies.

Di Bello, Patrizia Di Bello, 2009-12-09 Paying attention to the historically specific dimensions of objects such as the photograph, the illustrated magazine and the collection, the contributors to this volume offer new ways of thinking about nineteenth-century practices of reading, viewing, and collecting, revealing new readings of Wordsworth, Shelley, James and Wilde, among others.

Francis Bacon Michael Peppiatt,2019-03-13 This book, a biography on Francis Bacon, is inspired by the friendship the author had with Bacon and based on records of the conversations that took place since 1963. The book forms the first comprehensive account of the artist's life and his work.

Human Dimension and Interior Space Julius Panero, Martin Zelnik, 2014-01-21 The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the

physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.

Stop the Clocks! Helen Powell,2012-03-30 The clock plays a significant part in our understanding of temporality, but while it simplifies, regulates and coordinates, it fails to reflect and communicate the more experiential dimensions of time. As Helen Powell demonstrates in this book, cinema has been addressing this issue since its inception. Stop the Clocks! examines filmmakers' relationship to time and its visual manipulation and representation from the birth of the medium to the digital present. It engages both with experimentation in narrative construction and with films that take time as their subject matter, such as Donnie Darko, Interview with a Vampire, Lost Highway and Pulp Fiction. Helen Powell asks what underpins the enduring appeal of the science fiction genre with filmmakers and audience and how cinematography might inform our conceptualisation of other imagined temporal worlds, including the afterlife. She examines the role of angels and vampires in contemporary cinema, as well as the distinctive time schemes of new media and their implications for rethinking time and the moving image through digitalisation. Broad based and accessible, Stop the Clocks! will appeal to a wide interdisciplinary audience and provides a useful sourcebook on undergraduate and postgraduate courses in film and other arts and media-based disciplines.

Drawing from Life Clint Brown, Cheryl McLean, 1997 Along with working from the model, the figure-drawing student needs instruction in anatomy, history, and conceptual approaches; such instruction is often missing from life drawing classes due to time constraints. This text offers these elements, along with a visual reminder of studio practice. The chapters follow the natural development of a student's growth, from gesture drawing to personal exploration. An entire chapter on drawing the figure in perspective offers information unavailable in comparable texts. Asking the student to begin with quick sketches and gesture drawings establishes their significance in professional work, while giving students a non-threatening introduction on a level they can understand and master. Cohesive presentation of anatomy, including a chapter on the human head, helps students understand underlying structure of bones, muscle, and body fat. Larger images throughout promote clearer

understanding of concepts. A completely new section on color media provides up-to-date valuable information. Anatomy of the limbs has been reorganized for clarity.

Visual Digital Culture Andrew Darley,2002-01-04 Digital entertainment, from video games to simulation rides, is now a central feature of popular culture. Computer-based or digital technologies are supplanting the traditional production methods of television, film and video, provoking intense speculation about their impact on the character of art. Examining the digital imaging techniques across a wide range of media, including film, music video, computer games, theme parks and simulation rides, Visual Digital Culture explores the relationship between evolving digital technologies and existing media and considers the effect of these new image forms on the experience of visual culture. Andrew Darley first traces the development of digital computing from the 1960s and its use in the production of visual digital entertainment. Through case studies of films such as Toy Story, key pop videos such as Michael Jackson's Black or White, and computer games like Quake and Blade Runner, Andrew Darley asks whether digital visual forms mark a break with traditional emphases on story, representation, meaning and reading towards a focus on style, image performance and sensation. He questions the implications of digital culture for theories of spectatorship, suggesting that these new visual forms create new forms of spectatorship within mass culture.

The Emergence of Cinematic Time Mary Ann Doane, 2002-12-27 Hailed as the permanent record of fleeting moments, the cinema emerged at the turn of the nineteenth century as an unprecedented means of capturing time--and this at a moment when disciplines from physics to philosophy, and historical trends from industrialization to the expansion of capitalism, were transforming the very idea of time. In a work that itself captures and reconfigures the passing moments of art, history, and philosophy, Mary Ann Doane shows how the cinema, representing the singular instant of chance and ephemerality in the face of the increasing rationalization and standardization of the day, participated in the structuring of time and contingency in capitalist modernity. At this book's heart is the cinema's essential paradox: temporal continuity conveyed through stopped time, the rapid succession of still frames or frozen images. Doane explores the role of this paradox, and of notions of the temporal indeterminacy and instability of an image, in shaping not just cinematic time but also modern ideas about continuity and discontinuity, archivability, contingency and determinism, and temporal irreversibility. A compelling meditation on the status of cinematic knowledge, her book is also an inquiry into the very heart and soul of modernity.
