ANALYSIS AND APPROACH FOR SCHEMATIC DESIGN OF VIRTUAL WIRELESS SENSOR NETWORK Dr. Rahul Pethe,2022-07-25 A wireless sensor network is a promising communication technique in many fields of applications, but the energy-constrained characteristic of sensor nodes is one of the critical issues we must consider in designing a network. In each network, a node is typically powered by a battery with a limited energy supply, in such case cooperative broadcasting using virtualization of resources plays a significant role in saving transmission power consumption. Sensor networks have limited resources and often support large-scale applications that need scalable propagation of sensor data. This proposed work is meant to provide the architecture, for scalable and adaptive communication in large-scale sensor networks, also for enhancing the utility of the wireless communication Sensor Network using virtual concepts and virtual Network platforms.
