*Industrial Scale Suspension Culture of Living Cells* Hans-Peter Meyer,Diego Schmidhalter,2014-08-04 The submersed cultivation of organisms in sterile containments or fermenters has become the standard manufacturing procedure, and will remain the gold standard for some time to come. This book thus addresses submersed cell culture and fermentation and its importance for the manufacturing industry. It goes beyond expression systems and integrally investigates all those factors relevant for manufacturing using suspension cultures. In so doing, the contributions cover all industrial cultivation methods in a comprehensive and comparative manner, with most of the authors coming from the industry itself. Depending on the maturity of the technology, the chapters address in turn the expression system, basic process design, key factors affecting process economics, plant and bioreactor design, and regulatory aspects.

Industrial Biotechnology Christoph Wittmann,James C. Liao,2017-04-10 The latest volume in the Advanced Biotechnology series provides an overview of the main production hosts and platform organisms used today as well as promising future cell factories in a two volume book. Alongside describing tools for genetic and metabolic engineering for strain improvement, the authors also impart topical information on computational tools, safety aspects and industrial-scale production. Following an introduction to general concepts, historical developments and future technologies, the text goes on to cover multi-purpose bacterial cell factories, including those organisms that exploit anaerobic biosynthetic power. Further chapters deal with microbes used for the production of high-value natural compounds and those obtained from alternative raw material sources, concluding with eukaryotic workhorses. Of interest to biotechnologists and microbiologists, as well as those working in the biotechnological, chemical, food and pharmaceutical industries. **Without Words** James Tanton,2013-09 All real life mathematics is problem solving. And all those fascinated by puzzles are problem solvers at heart. But thinking mathematically is a skill we have to learn and one which it is easy to forget. Recreational mathematicians and students can practise problem solving in different ways. In this book solving puzzles is practised in a different way from most books they will have seen before:

# Readers get no clues to what the puzzle is about # They may take hours or even days to work out what is being asked of them # Even after that, some problems may have no solution The result of this challenge is a really challenging book that will fascinate anyone interested in puzzles and recreational mathematicians in particular. This volume contains 36 puzzles ranging from quite easy to quite difficult. The sister volume *More Without Words: Mathematical Puzzles to Confound and Delight* is also available - containing 36 more puzzles with fewer easy and more testing ones.

*Microbial BioEnergy: Hydrogen Production* Davide Zannoni, Roberto De Philippis, 2014-07-08 The central theme of this book "Microbial BioEnergy: Hydrogen Production" is focused on the biological machinery that microorganisms use to produce hydrogen gas. The book summarizes the achievements over the past decade in the biochemistry, structural and molecular biology, genomics and applied aspects of microbial H<sub>2</sub>-production, including microbial fuel cells (MFC), by phototrophs such as purple sulfur and non-sulfur bacteria (*Thiocapsa* spp., *Rhodobacter* and *Rhodospseudomonas* spp.) microalgae (*Chlamydomonas*) and cyanobacteria (*Anabaena* spp.) along with anaerobes and thermophiles such as *Caldicellulosiruptor* and *Thermotoga*. This is the first book of this series entirely devoted to microbial bio-hydrogen production and is intended to be a precious source of information for PhD students, researchers and undergraduates from disciplines such as microbiology, biochemistry, biotechnology, photochemistry and chemical engineering, interested in basic and applied sciences.

**Social Justice and the City** Nik Heynen, 2020-06-09 This special collection aims to offer insight into the state of geography on questions of social justice and urban life. While using social justice and the city as our starting point may signal inspiration from Harvey's (1973) book of the same name, the task of examining the emergence of this concept has revealed the deep influence of grassroots urban uprisings of the late 1960s, earlier and contemporary meditations on our urban worlds (Jacobs, 1961, 1969; Lefebvre, 1974; Massey and Catalano, 1978) as well as its enduring significance built upon by many others for years to come. Laws (1994) noted how geographers came to locate social justice struggles in the city through research that examined the ways in which material conditions contributed to poverty and racial and gender inequity, as well as how emergent social movements organized to reshape urban spaces across diverse engagements including the U.S. Civil Rights Movement, anti-war protests, feminist and LGBTQ activism, the American Indian Movement, and disability access. This book originally published as a special issue of *Annals of the American Association of Geographers*.

### **The Global and the Intimate** Geraldine Pratt,Victoria Rosner,2012-05-22

By placing the global and the intimate in near relation, sixteen essays by prominent feminist scholars and authors forge a distinctively feminist approach to questions of transnational relations, economic development, and intercultural exchange. This pairing enables personal modes of writing and engagement with globalization debates and forges a definition of justice keyed to the specificity of time, place, and feeling. Writing from multiple disciplinary and geographical perspectives, the contributors participate in a long-standing feminist tradition of upending spatial hierarchies and making theory out of the practices of everyday life.
