Application of Monoclonal Antibodies in Tumor Pathology Dirk J. Ruiter,G.J. Fleuren,S.O. Warnaar,2012-12-06 The development of monoclonal antibodies to human tumor associated antigens has greatly facilitated the application of immunohistochemical techniques to analyze surgically removed tissues. During the last few years this approach has been utilized by a progressively increasing number of investigators to analyze malignant cells. Although monoclonal antibodies to tumor associated antigens have not become yet routine reagents in immunopathology, they have provided new information which could not be obtained with conventional antisera or histochemical procedures. The following are representative examples. Tumor associated antigens have been identified which display a restricted distribution in normal tissues and therefore may represent useful markers for radio imaging and appropriate targets for immunotherapy. In spite of undetectable differences with conventional histopathological approaches heterogeneity has been found in the antigenic profile of tumor cells within a lesion, in autologous lesions removed from different anatomic sites from a given patient and in lesions removed from different patients. Phenotypes of tumor cells have been identified which correlate with the biology of tumor cells and with the clinical course of the disease. From a practical viewpoint the use of monoclonal antibodies in immunopathology has enhanced interactions between pathologists and immunologists, as exemplified by the present book. Such interactions have contributed to the application of basic research to clinical problems. The chapter of this book discusses investigations performed with monoclonal antibodies to antigens expressed by various types of normal and malignant human cells.

Feeling Smarter and Smarter Harold N. Levinson, MD, 2019-07-16 In this ground-breaking book, Dr. Harold Levinson, a renowned psychiatrist and clinical researcher, provides his long-awaited follow-up work about truly understanding and successfully treating children and adults with many and diverse dyslexia-related disorders such as those found on the cover. This fascinating, life-changing title is primarily about helping children who suffer from varied combinations and severities of previously unexplained inner-ear-determined symptoms resulting in difficulties with: reading, writing, spelling, math, memory, speech, sense of direction and time grammar, concentration/activity-level, balance and coordination headaches, nausea, dizziness, ringing ears, and motion-sickness frustration levels and feeling dumb, ugly, klutzy, phobic, and depressed impulsivity, cutting class, dropping out of

school, and substance abuse bullying and being bullied as well as anger and social interactions later becoming emotionally traumatized and scarred dysfunctional adults Feeling Smarter and Smarter is thus also about and for the millions of frustrated and failing adults who are often overwhelmed by similar and even more complicated symptoms—as well as for their dedicated healers. Having laid the initial foundations for his many current insights in an earlier bestseller, *Smart But Feeling Dumb*, Dr. Levinson now presents a compelling range of enlightening new cases and data as well as a large number of highly original discoveries—such as his challenging illumination that all dyslexia-related manifestations are primarily inner-ear or cerebellar-vestibular—not cerebrally—determined and so do not impair IQ, and an “ingeniously simple” explanatory theory of symptom formation. Most important, all the dyslexia/inner-ear based impairments and their symptoms were discovered by Dr. Levinson to respond rapidly and often “miraculously” in 75 to 85 percent of cases when treated with simple and safe inner-ear enhancing medications—thus enabling bright but dumb-feeling children and adults to feel... smarter and smarter.
