My Children's Keeper Michelle-Marie,2017-03 I have always considered myself to be a very observant individual; in tune with people and things around me. However, life proved that although I had sight, I could not see what was right before me. I was so far removed from being in tune when it came to the most important people in my life; my two children. Life is unpredictable and oftentimes feels like a test. Satan has a way of showing up at the most inopportune time. However, you have to trust and believe that things are working for the greater good behind the scenes. Every trial ends with a blessing; every tribulation ends with a testimony. Regardless where you may be in your journey, don't ever give up! Tribulations do not last forever.

Building Automated Trading Systems Benjamin Van Vliet,2007-03-07 Over the next few years, the proprietary trading and hedge fund industries will migrate largely to automated trade selection and execution systems. Indeed, this is already happening. While several finance books provide C++ code for pricing derivatives and performing numerical calculations, none approaches the topic from a system design perspective. This book will be divided into two sections—programming techniques and automated trading system (ATS) technology—and teach financial system design and development from the absolute ground up using Microsoft Visual C++.NET 2005. MS Visual C++.NET 2005 has been chosen as the implementation language primarily because most trading firms and large banks have developed and continue to develop their proprietary algorithms in ISO C++ and Visual C++.NET provides the greatest flexibility for incorporating these legacy algorithms into working systems. Furthermore, the .NET Framework and development environment provide the best libraries and tools for rapid development of trading systems. The first section of the book explains Visual C++.NET 2005 in detail and focuses on the required programming knowledge for automated trading system development, including object oriented design, delegates and events, enumerations, random number generation, timing and timer objects, and data management with STL.NET and .NET collections. Furthermore, since most legacy code and modeling code in the financial markets is done in ISO C++, this book looks in depth at several advanced topics relating to managed/unmanaged/COM memory management and interoperability. Further, this book provides dozens of examples illustrating the use of database connectivity with ADO.NET and an extensive treatment of SQL and FIX and XML/FIXML. Advanced programming topics such as threading, sockets, as well as using C++.NET to connect to Excel are also discussed at length and supported by examples. The second section of the book explains technological concerns and design concepts for automated trading systems. Specifically, chapters are devoted to handling real-

time data feeds, managing orders in the exchange order book, position selection, and risk management. A .dll is included in the book that will emulate connection to a widely used industry API (Trading Technologies, Inc.'s XTAPI) and provide ways to test position and order management algorithms. Design patterns are presented for market taking systems based upon technical analysis as well as for market making systems using intermarket spreads. As all of the chapters revolve around computer programming for financial engineering and trading system development, this book will educate traders, financial engineers, quantitative analysts, students of quantitative finance and even experienced programmers on technological issues that revolve around development of financial applications in a Microsoft environment and the construction and implementation of real-time trading systems and tools. * Teaches financial system design and development from the ground up using Microsoft Visual C++ .NET 2005. * Provides dozens of examples illustrating the programming approaches in the book * Chapters are supported by screenshots, equations, sample Excel spreadsheets, and programming code

Puddle Jumpers Anne Margaret Lewis,2016-02-02 It's a rainy day in the month of May and Sam spots a rainbow, and then a puddle. A perfect spring puddle. His mother warns, "No! No jumping in puddles! You must keep clean today!" but Sam can't stop himself from testing the water with his galoshes. And then the puddle invites him to play. The puddle whispers, "Jump, Puddle Jumper, jump!" and with that very first jump, Sam is off on an adventure of the imagination. He'll be a frog in a pond, with a hat and some spots and a magic wand. He'll be a crocodile with pink polka dots and teeth like blades, and a polar bear with purple polar hair. He's going to jump, leap, dance, plunge, swim, and jump again. Sam is having so much fun in his puddle that even Mom can't resist. With a leap and a thwump, she's jumping too, cheering, "Jump, Puddle Jumper, jump!" This happy picture book celebrates the simple, pure joy of jumping in a rain puddle. Nancy Cote's cheerful illustrations are full of kid appeal, a perfect match to a story that captures the magic of being a child. Let your imagination take you on your own adventure the next time you encounter an irresistible puddle. Aimed for children ages 3 to 6, this is a charming book about letting your imagination run wild and also about the joys children can find in even just a simple rain puddle. Encouraging kids to explore their outside world provides important developmental play for kids and parents will find the mom's reluctance and then acquiescence a good reminder that adults need to enter the world of children in order to allow them to explore their world and to learn from it. Sky Pony Press, with our Good Books, Racehorse and Arcade imprints, is proud to publish a broad range of books for young readers—picture books for small children, chapter books, books for middle grade readers, and novels for young adults.
