The Audacity of Name Calling Onuwa Victoria Ogbolu,2016-04-22 The current name-calling parading itself as political discourse has not only dominated American politics but also that of other nations. This ugly side of politics is threatening governance, impeding progress, and confusing the electorate. Disguised as a policy dialogue and dismissed as a political norm, name-calling is an endemic epidemic that has commandeered the real political agenda in America and it is more so in Obamas presidency. To dismiss vitriolic name-calling as an uncontrollable part of the political process, is to make a mockery of politics, destroy governance, and ultimately; it is an aberration of justice. Political name-calling is a sign of a serious ill within the larger society, especially when it plays a significant role in the outcome of elections and places uncooperative elected officials in a position of power. Thus, the book documents and exposes the vicious political utterances of people, who abuse their political powers and thereby encourage hate, divisiveness, and perhaps violence. Further, it reminds the readers of politics gone severely wrong, of bigotry re-enacted, of democracy stretched to its limits, and of a freedom of speech abused. This book directs Americans and the world to the ills of name-calling and the political vindictiveness that results from it. It takes the stand that civility has to be reintroduced into politics if any sociopolitical catastrophe is to be averted. It is therefore hoped that by presenting a comprehensive documentation of ugly political practices so prevalent in todays politics, readers will have a written reference point that may allow them to fully understand the dangers and consequences of name-calling as infused into politics. After all, to remain on a political path to human destruction through a dogmatic selfish agenda is not sustainable.

Talking about Troubles in Conversation Gail Jefferson,2015 Few conversational topics can be as significant as our troubles in life, whether everyday and commonplace, or more exceptional and disturbing. In groundbreaking research conducted with John Lee at the University of Manchester UK, Gail Jefferson turned the microscope on how people talk about their troubles, not in any professional or therapeutic setting, but in their ordinary conversations with family and friends. Through recordings of interactions in which people talk about problems they're having with their children, concerns about their health, financial problems, marital and relationship difficulties (their own or other people's), examination failures, dramatic events such as burglaries or a house fire and other such troubles, Jefferson explores the interactional dynamics and complexities of introducing such topics, of how speakers sustain and elaborate their descriptions and accounts of their troubles, how participants align and affiliate with one another, and finally manage to move away from such topics. The studies Jefferson published out of that remarkable period of research have been collected together in this volume. They are as insightful and informative about how we talk about our troubles, as they are innovative in the development and application of Conversation Analysis. Gail Jefferson (1938-2008) was one of the co-founders of Conversation

Analysis (CA); through her early collaboration with Harvey Sacks and in her subsequent research, she laid the foundations for what has become an immensely important interdisciplinary paradigm. She co-authored, with Harvey Sacks and Emanuel Schegloff, two of the most highly cited articles ever published in Language, on turn-taking and repair. These papers were foundational, as was the transcription system that she developed and that is used by conversation analysts world-wide. Her research papers were a distinctive and original voice in the emerging micro-analysis of interaction in everyday life.

SDL 2009: Design for Motes and Mobiles Rick Reed, Attila Bilgic, Reinhard Gotzhein, 2009-09-18 This volume contains the papers presented at the 14th SDL Forum, Bochum, Germany entitled Design for Motes and Mobiles. The SDL Forum has been held every two years for the last three decades and is one of the most important open events in the calendar for anyone from academia or industry involved in System Design Languages and modelling technologies. It is a primary conference event for discussion of the evolution and use of these languages. The most recent innovations, trends, experiences, and concerns in the field are discussed and presented. The SDL Forum series addresses issues related to the modelling and analysis of reactive systems, distributed systems, and real-time and complex systems such as telecommunications, automotive, and aerospace applications. The intended audience of the series includes users of modelling techniques in industrial, research, and standardization contexts, as well as tool vendors and language researchers. Of course, during the last three decades languages, associated methods, and tools have evolved and new ones have been developed. The application domain has changed almost beyond recognition. Threedecadesago the mobile technology of today was science fiction, whereas now we find software systems embedded in inexpensive childrens' toys. More recently multi-core processors have become common technology for consumer computers, and are beginning to be applied in small devices. Even in small co-operating, independently

powered remote devices (such as motes and mobile phones), there is enough memory and processing power to support quite sophisticated operating systems and applications.
