Olga Popovic Larsen, Andy Tyas

**Nature's Covenant** C. Stephen Finley, 2010-11-01 *Nature's Covenant*, a reading of John Ruskin, including his neglected poems and early prose writings, brings forth a fresh awareness of his career as an interpreter of landscape, where landscape is conceived as a filter of human meaning, of aesthetic and theological significance. The book shows the correlation in Ruskin's work between the Reformed theology of his religious tradition and the Romantic poetics of literature that he sought to practice. It reconstructs the particular hermeneutic of landscape that Ruskin developed, a vision of the natural world that depended equally upon the Romantic/evangelical renovation of heart and eye and a remarkable articulation of the typology of nature. Ruskin's own theoria, or contemplation of nature's text, the full-scale development of which takes place in *Modern Painters II*, is revealed and explored, inviting renewed understanding of works both early and late, especially of certain key chapters of such often neglected works as *The Requiem of St. Mark's Rest* or *the Revision of Deucalion*. Finley shifts the emphasis away from the secularized readings of this century to recover lost religious meanings in Ruskin's critical writing, including his unpublished sermons. No previous modern study has focused on Ruskin's religious upbringings and its influence on his mature writings while countering the critical received orthodoxy about his faith, his unconversion, and inevitable secularization often retold as part of the narrative of modernism, which proclaimed the necessary supersession of Victorian superstition by modern enlightenment. Because of its commitment to a reading of Ruskin's religious sense in light of his romantic inheritance, *Nature's Covenant* is also a book about Victorian romanticism, sharing in the current reevaluation of Wordsworth's later career, and in the renewed scholarly attention to Sir Walter Scott.

**Natural Aristocracy** Kevin Railey, 2012-06-04 Looks at the relationship between American history and William Faulkner's works, and between southern history and Faulkner's subjectivity. Reprint.

**Natural Forms of Defense Against Biological, Chemical and Nuclear Threats** John Brighton, 2007-02-26 The events that took place on September 11th caused Dr. John Brighton, a naturopathic health consultant, to ask himself questions about what role natural forms of healing might have in a scenario involving weapons of mass destruction (WMD). As he examined the issues and the nature of the threat, he felt assured that a naturalistic approach could make a significant contribution in conjunction with that offered by conventional medicine. Moreover, he felt that to use both would provide a more powerful deterrent than if either were used alone. The naturalistic approach would augment the use of drugs by adding 5 extra lines of defense aimed at supporting and strengthening the immune system to deal with such a dire event. These lines include: A psychological dimension A social dimension A preventative dimension An environmental dimension A specific dimension The whole idea of this holistic strategy is to employ prevention and immune-enhancing factors in order to reduce the level of crisis to begin with. As a result, the dependency on antibiotics (there are no effective antivirals) and other valuable medical resources can be considerably reduced, and, most importantly, preserved for when they would be needed most. Another benefit of integrating these two systems would add what Dr. Brighton calls synergistic complexity as a way to reduce the current crisis of germ resistance to many most potent antibiotics and to provide a holistic approach to all forms of WMD. The book clarifies the scope of the threat we face by examining: The variety of biological, chemical, and nuclear threats The factors involved in the creation of WMD The uncanny capacity of microbes to develop resistance to our medications The threat of bioengineering and the creation of superbugs How synergistic complexity could provide a possible solution A chapter is dedicated to focusing on the specific nature and challenges posed by each biological, chemical and nuclear agent. This includes: A description of the agent How it causes harm How it might be used as a weapon, and the possibility of it being used How it is detected diagnostically and in the field The conventional method of care and treatment The suggested natural forms of defense including herbs, vitamins & minerals, and other natural substances and healing therapies. The book ends with a forward-looking chapter on emerging technologies that have promise of increasing our level of defense against WMD. A bibliography and a full section on resources are available.

**Comprehensive Natural Products III**, 2020-07-22 *Comprehensive Natural Products III*, Third Edition, Seven Volume Set updates and complements the previous two editions, including recent advances in cofactor chemistry, structural diversity of natural products and secondary metabolites, enzymes and enzyme mechanisms and new bioinformatics tools. Natural products research is a dynamic discipline at the intersection of chemistry and biology concerned with isolation, identification, structure elucidation, and chemical characteristics of naturally occurring compounds such as pheromones, carbohydrates, nucleic acids and enzymes. This book reviews the accumulated efforts of chemical and biological research to understand living organisms and their distinctive effects on health and medicine and to stimulate new ideas among the established natural products community. Provides readers with an in-depth review of current natural products research and a critical insight into the future direction of the field Bridges the gap in knowledge by covering developments in the field since the second edition published in 2010 Split into 7 sections on key topics to allow students, researchers and professionals to find relevant information quickly and easily Ensures that the knowledge within is easily understood by and applicable to a large audience

**Raw: Architectural Engagements with Nature** Solveig Bøe, Hege Charlotte Faber, 2016-04-08 Through cross-disciplinary explorations of and engagements with nature as a forming part of architecture, this volume sheds light on the concepts of both nature and architecture. Nature is examined in a raw intermediary state, where it is noticeable as nature, despite, but at the same time through, man's effort at creating form. This is done by approaching nature from the perspective of architecture, understood, not only as concrete buildings, but as a fundamental human way both of being in, and relating to, the world. Man finds and forms places where life may take place. Consequently, architecture may be understood as ranging from the simple mark on the ground and primitive enclosure, to the contemporary megalopolis. Nature inheres in many aesthetic forms of expression. In architecture, however, nature emerges with a particular power and clarity, which makes architecture a raw kind of art. Even though other forms of art, as well as aesthetic phenomena outside the arts, are addressed, the analogy to architecture will be evident and important. Thus, by using the concept of 'raw' as a focal point, this book provides new approaches to architecture in a broad sense, as well as other aesthetic and artistic practices, and will be of interest to readers from different fields of the arts and humanities, spanning from philosophy and theology to history of art, architecture and music.

**Design & Nature IV** C. A. Brebbia, 2008 Design in engineering and science has often been inspired by nature. This has been more evident in recent years, after a period during which our civilization thought in terms of taming rather than working in harmony with nature. The consequences of that approach are still with us and have resulted in a world increasingly homogenized, lacking in biodiversity and with increased pollution. Mankind has been slow to learn and even slower to apply the lessons that nature offers, in spite of the urgency of our predicament. This book contains papers presented at the fourth International Conference on Comparing Design in Nature with Science and Engineering. The emphasis of this Volume is on engineering and architectural applications and on biomimetics, reflecting in some measure current interest in finding environmentally friendly solutions which also optimize the use of natural resources. The contributions have been arranged into the following topics: Biomimetics; Shape and Form in Engineering Nature; Nature and Architectural Design; Natural Materials and Surfaces; Complexity; and Education.

**Naturalizing Heidegger** David E. Storey, 2015-02-10 Explores the evolution of Heidegger's thinking about nature and its relevance for environmental ethics. In *Naturalizing Heidegger*, David E. Storey proposes a new interpretation of Heidegger's importance for environmental philosophy, finding in the development of his thought from the early 1920s to his later work in the 1940s the groundwork for a naturalistic ontology of life. Primarily drawing on Heidegger's engagement with Nietzsche, but also on his readings of Aristotle and the biologist Jakob

von Uexküll, Storey focuses on his critique of the nihilism at the heart of modernity, and his conception of the intentionality of organisms and their relation to their environments. From these ideas, a vision of nature emerges that recognizes the intrinsic value of all living things and their kinship with one another, and which anticipates later approaches in the philosophy of nature, such as Hans Jonas's phenomenology of life and Evan Thompson's contemporary attempt to naturalize phenomenology.

**Autobiography and Natural Science in the Age of Romanticism** Bernhard Kuhn, 2016-04-15 Set against the backdrop of a rapidly fissuring disciplinary landscape where poetry and science are increasingly viewed as irreconcilable and unrelated, Bernhard Kuhn's study uncovers a previously ignored, fundamental connection between autobiography and the natural sciences. Examining the autobiographies and scientific writings of Rousseau, Goethe, and Thoreau as representative of their ages, Kuhn challenges the now entrenched thesis of the two cultures. Rather, these three writers are exemplary in that their autobiographical and scientific writings may be read not as separate or even antithetical but as mutually constitutive projects that challenge the newly emerging boundaries between scientific and humanistic thought during the Romantic period. Reading each writer's life stories and nature works side by side—as they were written—Kuhn reveals the scientific character of autobiographical writing while demonstrating the autobiographical nature of natural science. He considers all three writers in the context of scientific developments in their own times as well as ours, showing how each one marks a distinctive stage in the growing estrangement of the arts and sciences, from the self-assured epistemic unity of Rousseau's time, to the splintering of disciplines into competing ways of knowing under the pressures of specialization and professionalization during the late Romantic age of Thoreau. His book thus traces an unfolding drama, in which these writers and their contemporaries, each situated in an intellectual landscape more fragmented than the last, seek to keep together what modern culture is determined to break apart.

**Life as Spirit** Keith Ka-fu Chan, 2018-08-21 Paul Tillich is exceptional in modern theologians that his distinctive and abundant understanding of the concept of life and spirit has the potential to engage with other disciplines, such as biology, psychology, cosmology and social science; and that his ontological understanding of "life as spirit" which is so crucial in the ecological consideration, is so complex and subtle that enables powerful and critical inter-religious dialogue in environmental ethics. This book argues that, despite the fact that Tillich did not engage in ecological and environmental theology directly, his abundant personal experience of nature-mysticism and intellectual understanding of the idea of nature rooted in his Lutheran and German idealist heritages and, more importantly, his ontological-pneumatological holistic and multi-dimensional conception of unifying and differentiated reality, perfectly and organically coupled with the theonomous vision of theology of culture, nature and morality is profoundly ecologically oriented.

**Thomas Aquinas in Translation** Saint Thomas (Aquinas), Thomas Aquinas, 2011 No description available

**Survival of the Beautiful** David Rothenberg, 2013-01-01 'The peacock's tail makes me sick!' said Charles Darwin. That's because the theory of evolution as adaptation can't explain why nature is so beautiful. It took the concept of sexual selection for Darwin to explain that, a process that has more to do with aesthetic taste than adaptive fitness. *Survival of the Beautiful* is a revolutionary new examination of the interplay of beauty, art, and culture in evolution. Taking inspiration from Darwin's observation that animals have a natural aesthetic sense, philosopher and musician David Rothenberg probes why animals, humans included, have an innate appreciation for beauty – and why nature is, indeed, beautiful.

The natural and universal principles of harmony and modulation William Wignall Parkinson, 1872

Music Theory and Natural Order from the Renaissance to the Early Twentieth Century Suzannah Clark, Alexander Rehding, 2001 Music theory of almost all ages has relied on nature in its attempts to explain music. The understanding of what 'nature' is, however, is subject to cultural and historical differences. In exploring ways in which music theory has represented and employed natural order since the scientific revolution, this volume asks some fundamental questions not only about nature in music theory, but also the nature of music theory. In an array of different approaches, ranging from physical acoustics to theology and Lacanian psychoanalysis, these essays examine how the multifarious conceptions of nature, located variously between scientific reason and divine power, are brought to bear on music theory. They probe the changing representations and functions of nature in the service of music theory and highlight the ever-changing configurations of nature and music, as mediated by the music-theoretical discourse.

*Natural Operations in Differential Geometry* Ivan Kolar, Peter W. Michor, Jan Slovák, 2013-03-09 The aim of this work is threefold: First it should be a monographical work on natural bundles and natural operators in differential geometry. This is a field which every differential geometer has met several times, but which is not treated in detail in one place. Let us explain a little, what we mean by naturality. Exterior derivative commutes with the pullback of differential forms. In the background of this statement are the following general concepts. The vector bundle  $A \times T^*M$  is in fact the value of a functor, which associates a bundle over  $M$  to each manifold  $M$  and a vector bundle homomorphism over  $f$  to each local diffeomorphism  $f$  between manifolds of the same dimension. This is a simple example of the concept of a natural bundle. The fact that exterior derivative  $d$  transforms sections of  $A \times T^*M$  into sections of  $A \times T^*(k+1)M$  for every manifold  $M$  can be expressed by saying that  $d$  is an operator from  $A \times T^*M$  into  $A \times T^*(k+1)M$ .

*Mystical Theology and Platonism in the Time of Cusanus* Jason Aleksander, Sean Hannan, Joshua Hollmann, Michael Moore, 2023-10-20 *Mystical Theology and Platonism in the Time of Cusanus* engages with the history of mystical theology and Neoplatonic philosophy through the lens of the 15th century philosopher and theologian, Nicholas of Cusa. The volume comprises nineteen essays that break down the barriers between medieval and Renaissance studies, reinterpreting Cusanus' place in the history of thought by exploring the archive that informed his thinking, while also interrogating his works by exploring them from the standpoint of their later reception by modern philosophers and theologians. The volume also offers tribute to the career of Donald F. Duclow, a leading scholar in the field of Cusanus studies in particular and of the history of mystical theology and Neoplatonic philosophy more generally.

Eco-architecture III Santiago Hernández, 2010-03-16 This book contains most of the papers presented in the Eco-Architecture 2010 conference, which was the third edition of the International Conference on Harmonisation between Architecture and Nature. Previous editions, that were very successful were held previously in the New Forest, UK, in 2006 and the Algarve, Portugal in 2008 and demonstrated the importance of a forum like this to discuss the characteristics and challenges of such architectural vision. Eco-Architecture implies a new approach to the design process intended to harmonise its products with nature. This involves ideas such as minimum use of energy at each stage of the building process, taking into account the amount required during the extraction and transportation of materials, their fabrication, assembly, building erection, maintenance and eventual future recycling. Presentations in the conference were related to topics like building technologies, design by passive systems, design with nature, ecological and cultural sensitivity, life cycle assessment, quantifying sustainability in architecture, resources and rehabilitation, and issues from education, research and practice. Case studies from different places around the world were also presented.

*Nature and Ornament ...* Lewis Foreman Day, 1909

*Conceptual Structural Design* Olga Popovic Larsen, Andy Tyas, 2003 This book aims to bridge the gap between engineers' and architects' understanding of structural form. Its intention is to inspire the development of innovative and viable structures. It presents case studies where imaginative structural forms are in harmony with the architectural concept and at the same time present very efficient solutions to technical and structural problems.

*Prosthetic Articulation* George Wood Clapp, 1914

*Integrating the Visual Arts Across the Curriculum* Julia Marshall, 2019-09-13 With lots of examples and color images, this resource is both a foundational text and a practical guidebook for bringing contemporary art into elementary and middle school classrooms as a way to make learning joyful and meaningful for all learners. The authors show how asking questions and posing problems spark curiosity and encourage learners to think deeply and make meaningful connections across the curriculum. At the center of their approach is creativity, with contemporary visual art as its inspiration. The text covers methods of creative inquiry-based learning, art and how it connects to the "big ideas" addressed by academic domains, flexible structures teachers can use for curriculum development, creative teaching strategies using contemporary art, and models of art-based inquiry curriculum. Book Features: Provides research-based project ideas and curriculum models for arts integration. Shows how Project Zero's flexible structures and frameworks can be used to develop creative inquiry and an arts integration curriculum. Explains how contemporary visual art connects to the four major disciplines—science, mathematics, social studies, and language arts. Includes full-color images of contemporary art that are appropriate for elementary and middle school learners. Demonstrates how arts integration can and should be substantive, multi-dimensional, and creative. "If you long for an arts classroom that connects students to the astonishingly interesting world they live in and want some helpful guidance on how to do it, this is the book for you!" –From the Foreword by Connie Stewart, University of Northern Colorado
