Lies, Damned Lies and Anglers Bruce Sandison, Jim Seaton, 2011-06-02 When fishing, there's always an element of chance. And the occasional opportunity to exaggerate just a bit, especially about the one that got away. In *Lies, Damned Lies & Anglers*, Bruce Sandison searches for the truth about angling, with all its pleasures and frustrations, and reveals some of the secrets of success he has discovered over the years. For those drawn to river and loch, peace, tranquility and contentment are key. But catching fish is an altogether trickier business. Over the years, Bruce Sandison has caught prize fish almost by accident, suffered as absolute beginners have had more than their fair share of luck, battled the elements in small boats, worn inappropriate waders and has, by chance, also discovered the songs that fish simply can't resist. Through good times and bad, the odd big fish may have got away but, of course, the stories are all true . . .

The Abduction John F. Brinster, 2007-03 A new novel by a noted author of science, philosophy and religion with its subplot set in first century China when massive walls were built for protection against Mongolian hordes and alliances were sought with the mushrooming Roman Empire far to the west. An ancient legend suggested the abduction of the Christ child by an ambitious Chinese ambassador, an early traveler, who replaced him in the manger with his own twin son. Influenced by the messianic prophesy, his mission was to return to China with the secret of Roman success and the potential for Chinese superiority. Following his brother's crucifixion and burial, the second twin was mistaken for resurrection. With similar previously undisclosed events in first century Judaea an historical account was contained in the controversial Book of Chan, hidden in the Great Wall for two thousand years. The location was inscribed in a set of Chinese seals with sculptured ivory handles since scattered among world collectors of sigillography. Two Harvard and Oxford professors, meeting on an Oriental cruise, teamed up in search of the legendary book but encountered very rough competition from religious agents determined to prevent disclosure. Amidst touches of romance they uncovered a unique culture at the conflux of the Great Wall and Silk Road. Finding a number of the ancient seals, including several that later had been carried to Venice by the Marco Polo entourage, the academic couple succeeded in computer analysis producing a usable matrix map. Written in the genre of *The DaVinci Code*, the book includes an important philosophical addendum on the search for greater realism in biblical understanding that strongly influenced the creation of this unique and somewhat controversial story. Proof readers see it as a best seller and the next major Hollywood Project.

The Marketing of Works Sergiy E. Pogodayev, 2021-07-30 This book is the first to describe a new type of marketing: namely, the marketing of works. This is the line of marketing activity that provides search and receiving orders to meet the effective demand of customers for the manufacture, repair, modernization, re-equipment, or liquidation of the customer's facilities with a change in their market value and without transferring ownership to these objects from the customer to the executor of works. The book will show the reader that works are a type of production activity that changes the market value of the objects being processed as opposed to the services, and provides definitions of concepts at the end of each chapter. It will serve to provide marketing theorists with many opportunities for research that will enable them to make their own scientific discoveries and acquire new scientific results.

Medicine and Ethics in Times of Corona Martin Woesler, Hans-Martin Sass, 2020-11 The Corona pandemic kills people, endangers families, friends, communities, companies, institutions, societies, economies and global networks. It brings about triage, unemployment, social distancing, and home

schooling. Countries respond differently, often set aside civil and basic human rights. Families and friends cannot get together, visiting the sick, nor attending funerals. This pestilence is clearly a cultural, economic and political disease. 40 leaders in medical and sociological research, in politics, religion, and consulting from 24 countries offer diverse, sometimes controversial answers, collected by Martin Woesler and Hans-Martin Sass .

Nanogenerators in Korea Dukhyun Choi, Yong Tae Park, 2019-02-27 Fossil fuels led the 21st century industrial revolution but caused some critical problems such as exhaustion of resources and global warming. Also, current power plants require too much high cost and long time for establishment and facilities to provide electricity. Thus, developing new power production systems with environmental friendliness and low-cost is critical global needs. There are some emerging energy harvesting technologies such as thermoelectric, piezoelectric, and triboelectric nanogenerators, which have great advantages on eco-friendly low-cost materials, simple fabrication, and various operating sources. Since the introduction of various energy harvesting technologies, many novel designs and applications as power suppliers and physical sensors in the world have been demonstrated based on their unique advantages. In this Special Issue, we would like to address and share basic approaches, new designs, and industrial applications related to thermoelectric, piezoelectric, and triboelectric devices which are on-going in Korea. With this Special Issue, we aim to promote fundamental understanding and to find novel ways to achieve industrial product manufacturing for energy harvesters.

Bulk Collection Fred H. Cate, James X. Dempsey, 2017-09-08 This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. This book is the culmination of nearly six years of research initiated by Fred Cate and Jim Dempsey to examine national practices and laws regarding systematic government access to personal information held by private-sector companies. Leading an effort sponsored by The Privacy Projects, they commissioned a series of country reports, asking national experts to uncover what they could about government demands on telecommunications providers and other private-sector companies to disclose bulk information about their customers. Their initial research found disturbing indications of systematic access in countries around the world. These data collection programs, often undertaken in the name of national security, were cloaked in secrecy and largely immune from oversight, posing serious threats to personal privacy. After the Snowden leaks confirmed these initial findings, the project morphed into something more ambitious: an effort to explore what should be the rules for government access to private-sector data, and how companies should respond to government demands for access. This book contains twelve updated country reports plus eleven analytic chapters that present descriptive and normative frameworks for assessing national surveillance laws, survey evolving international law and human rights principles applicable to government surveillance, and describe oversight mechanisms. It also explores the concept of accountability and the role of encryption in shaping the surveillance debate. Cate and Dempsey conclude by offering recommendations for both governments and industry.
