Douglas, You Need Glasses! Ged Adamson, 2016-05-17 Meet Douglas, a dog with a big problem: he needs eyeglasses but doesn't know it, and his bad eyesight tends to land him in some pretty hairy situations. Readers will laugh along with the new picture book character Douglas as he chases a leaf that he mistakes for a squirrel, walks through wet cement because he can't see the warning sign, and annoys the neighbor's dog by

mistakenly eating out of his bowl. And when Douglas's owner Nancy finally takes him to what is clearly an eyeglass store and Douglas asks, "Why are you taking me to a shoe store?" everyone will be giggling. After an eye exam confirms that Douglas needs glasses, and Nancy helps him find the perfect pair, readers will rejoice with Douglas as he sees all the amazing things he's been missing! Both kids and parents will laugh out loud—and may even recognize themselves!—while reading this utterly irresistible, hilarious picture book.

Glasses: Who Needs 'Em? Lane Smith, 2001 Glasses are for dorks. At least that's what one boy thinks, until the eye doctor begins a list of well-adjusted eyeglass wearers that he knows: moms, dads, scientists, Hong Kong flu bugs, snowmen, robots, worms and potatoes. This wildly imaginative story will convince any child that wearing glasses will help him or her see things in a whole new way. Full color throughout.

My Glasses and My Word (That's All I Need) Jacqueline E. Richardson, 2012-07-31 This book contains Reminding-Us-of God poems inspired by the Holy Spirit. Though personal in nature, they stimulate the reader to meditate on the ways one can see God's had at work in every day life. Whether it's through a sea gull, the wind, bags of leaves, feelings of guilt, sorrow, joy, or in just waiting in a room full of people, it does not matter. We can receive a life lesson from

anything, any time, any where.

Fault-Tracing: Against Quine-Duhem Sam

Mitchell,2020-09-21 It is widely believed in

philosophy of science that nobody can claim that any verdict of science is forced upon us by the effects of a physical world upon our sense organs and instruments. The Quine-Duhem problem supposedly allows us to resist any conclusion. Views on language aside, Quine is supposed to have shown this decisively. But it is just false. In many scientific examples, there is simply no room to doubt that a particular hypothesis is responsible for a refutation or established by the observations. Fault Tracing shows how to play independently established hypotheses against each other to determine whether an arbitrary hypothesis needs to be altered in the light of (apparently) refuting evidence. It analyses real examples from natural science, as well as simpler cases. It argues that, when scientific theories have a structure that prevents them from using this method, the theory looks wrong, and is subject to serious criticism. This is a new, and potentially far-reaching, theory of empirical justification.
