Kenya: A Natural Outlook ,2013-10-22 Kenya is a thriving country in East Africa: its economy is largely based on the natural environment that frames the tourism sector, mainly through safaris and holidays on the coast. The natural environment also underpins the second largest industry: agriculture. Kenya's social, technological, and industrial developments are a reference for many neighboring countries. Kenya plays a leading role in Africa and attracts huge amounts of investments. Furthermore, the humanitarian community has made Nairobi its base for international headquarters and regional offices. This makes Kenya a possible model for development and investment in its widest sense. This book aims at updating the holistic view on Kenya's natural environment and resources. It provides a sound scientific introduction to this country's physical and socioeconomic setting and its evolution through time and will appeal to a broad audience

of students – in Kenya and abroad – as well as those working in the development and humanitarian sectors and to international donors looking for a scientific compendium on Kenya's environment. Its structure and references allow the reader to deepen his or her knowledge of every theme touched on in the book. Combines different aspects of physical geography, water and soil resources and their management strategies Written by a blend of international and national experts Includes specific case studies

The regeneration of east Manchester Georgina

Blakeley, Brendan Evans, 2015-11-01 East Manchester has been the site of one of the most substantial regeneration projects internationally. The initiative in east Manchester confirmed the tag that the city is the 'regeneration capital' of the United Kingdom. While the book focuses on a single project, it has wider relevance to national and international regeneration initiatives. The book assesses the outcomes of the regeneration, although it demonstrates the difficulties in producing a definitive evaluation. It has a political focus and illuminates and challenges many assumptions underpinning three major current academic debates: governance, participatory democracy and ideology. The book is relevant to students of politics, geography, sociology, public

administration and recent history but will also interest practitioners, academics and general readers interested in urban regeneration. Mancunians will also be fascinated by the rapidly changing face and character of their city as will those with an interest in Manchester's football, the Commonwealth Games and Sportcity.

Introduction to Emergency Management Brenda D.

Phillips,David M. Neal,Gary Webb,2011-10-19 Emergency
management university programs have experienced dramatic and
exponential growth over the last twelve years. This new, fully
updated edition introduces majors and minors to the field and
provides content accessible to those students taking introductory
emergency management courses. The book's strength is in looking
at the regional, state, and local level response, as well as some of
the often misunderstood or overlooked social aspects of disasters.
Real-world cases are described throughout including considerations
of international emergency management and disasters.

A review of Kenya's national policies relevant to climate

change adaptation and mitigation Paul O Ongugo,David
Langat,Vincent O Oeba,James M Kimondo,Benjamin Owuor,Jane
Njuguna,George Okwaro,Aaron JM Russell,2014-12-16 Climate
change will impact many sectors of the economy: rural agriculture,
biodiversity, hydrology, etc. Farmers are particularly affected since
agriculture, livestock, fisheries, horticulture and agroforestry depend
on specific soil, rainfall and temperature conditions. Mt. Elgon's

ecosystem is well known for its agricultural production hence our choice to study how the implementation of environmental policies affect the livelihoods of local communities.

Johns and Cunningham's The Physics of Radiology Eva Bezak, Alun H Beddoe, Loredana G Marcu, Martin Ebert, Roger Price, 2021-03-01 The fifth edition of this respected book encompasses all the advances and changes that have been made since it was last revised. It not only presents new ideas and information, it shifts its emphases to accurately reflect the inevitably changing perspectives in the field engendered by progress in the understanding of radiological physics. The rapid development of computing technology in the three decades since the publication of the fourth edition has enabled the equally rapid expansion of radiology, radiation oncology, nuclear medicine and radiobiology. The understanding of these clinical disciplines is dependent on an appreciation of the underlying physics. The basic radiation physics of relevance to clinical oncology, radiology and nuclear medicine has undergone little change over the last 70 years, so much of the material in the introductory chapters retains the essential flavour of the fourth edition, updated as required. This book is written to help the practitioners in these fields understand the physical science, as

well as to serve as a basic tool for physics students who intend working as medical radiation physicists in these clinical fields. It is the authors' hope that students and practitioners alike will find the fifth edition of *The Physics of Radiology* lucid and straightforward.

Kenya: A Natural Outlook John B. Kyalo Kiema, 2013-10-22

This chapter begins with a synopsis of the basic concept of remote sensing with the various stages and interactions that characterize the entire remote sensing process described. A brief recapitulation of the status of stored water in Kenya is then presented. The monumental challenge facing many poor Kenyan households in accessing clean and safe water in sufficient quantities is reiterated. The chapter underscores the critical value of accurate and timely geospatial and hydro-meteorological datasets in supporting integrated water resources management. It is argued that the availability of techniques that deliver information on the changes in stored water at a more local scale is the first step towards realizing an efficient water society. Finally, two case studies that employ diverse remote sensing datasets to provide an evidence based explanation of the decline in stored water in Lakes Victoria and

Naivasha are elucidated.

Promoting Green Economy Ayuk, Elias T., Oku, Effiom E., 2017-02-03 Most African national economies depend on the exploitation of both renewable and non-renewable natural resources for development. Conventional and unconventional exploitation of natural resources has left negative carbon footprints. This has also degraded hotspots across the African continent, impacting negatively on people and the environment. A Green Economy offers the continent the opportunity to achieve sustained economic development devoid of environmental degradation and inefficient utilisation of natural resources. This book, *Promoting Green Economy*, explores issues affecting the socio-economic development of the continent and focuses on Africa's need for a green economy. With chapters written by seasoned authors from academia and industry across the continent, the book examines the challenges of sustainable management of Africa's natural resources and recommends the need for the continent to transit towards green economy as this can provide opportunities for minimising environmental footprints of all economic activities. The book calls on the commitment of the public and private sectors to the development of appropriate green economy policies and

regulatory frameworks to promote inclusive growth.

Management, Information and Educational Engineering Hsiang-Chuan Liu, Wen-Pei Sung, Wenli Yao, 2015-06-11 This book contains selected Computer, Management, Information and Educational Engineering related papers from the 2014 International Conference on Management, Information and Educational Engineering (MIEE 2014) which was held in Xiamen, China on November 22-23, 2014. The conference aimed to provide a platform for researchers, engineers and academic

Implementing Environmental Accounts Rashid M. Hassan, Eric D. Mungatana, 2012-12-02 Leaving aside human and social capital for a future volume, the book should be viewed as a crucial first step in developing indicators for total wealth in the countries covered by the case studies, which include Kenya, Uganda, Tanzania, Ethiopia, Mozambique and South Africa. These case studies experiment with implementing the SEAA in sub-Saharan nations known to suffer from the ‘resource curse’: their wealth in resources and commodities has allowed inflows of liquidity, yet this cash has not funded crucial developments in infrastructure or education. What’s more, resource-driven economies are highly vulnerable to commodity price mutability. The new measures of

wealth deployed here offer more hope for the future in these countries than they themselves would once have allowed for.

Routledge Handbook of Complementary and Alternative Medicine Nicola K. Gale, Jean V. McHale, 2015-04-10 The provision and use of traditional, complementary and alternative medicine (CAM) has been growing globally over the last 40 years. As CAM develops alongside - and sometimes integrates with - conventional medicine, this handbook provides the first major overview of its regulation and professionalization from social science and legal perspectives. The Routledge Handbook of Complementary and Alternative Medicine draws on historical and international comparative research to provide a rigorous and thematic examination of the field. It argues that many popular and policy debates are stuck in a polarized and largely asocial discourse, and that interdisciplinary social science perspectives, theorising diversity in the field, provide a much more robust evidence base for policy and practice in the field. Divided into four sections, the handbook covers: analytical frameworks power, professions and health spaces risk and regulation perspectives for the future. This important volume will interest social science and legal scholars researching complementary and alternative medicine, professional

identify and health care regulation, as well as historians and health policymakers and regulators.

Designing for Safe Use Michael Wiklund, Jonathan Kendler, Jon Tilliss, Cory Costantino, Kimmy Ansems, Valerie Ng, Ruben Post, Brenda van Geel, Rachel Aronchick, Alix Dorfman, 2019-03-11

How do you prevent a critical care nurse from accidentally delivering a morphine overdose to an ill patient? Or ensure that people don't insert their arm into a hydraulic mulcher? And what about enabling trapped airline passengers to escape safely in an emergency? Product designers and engineers face myriad such questions every day. Failure to answer them correctly can result in product designs that lead to injury or even death due to use error. Historically, designers and engineers have searched for answers by sifting through complicated safety standards or obscure industry guidance documents. Designing for Safe Use is the first comprehensive source of safety-focused design principles for product developers working in any industry. Inside you'll find 100 principles that help ensure safe interactions with products as varied as baby strollers, stepladders, chainsaws, automobiles, apps, medication packaging, and even airliners. You'll discover how protective features such as blade guards, roll bars, confirmation

screens, antimicrobial coatings, and functional groupings can protect against a wide range of dangerous hazards, including sharp edges that can lacerate, top-heavy items that can roll over and crush, fumes that can poison, and small parts that can pose a choking hazard. Special book features include: Concise, illustrated descriptions of design principles Sample product designs that illustrate the book's guidelines and exemplify best practices Literature references for readers interested in learning more about specific hazards and protective measures Statistics on the number of injuries that have arisen in the past due to causes that might be eliminated by applying the principles in the book Despite its serious subject matter, the book's friendly tone, surprising anecdotes, bold visuals, and occasional attempts at dry humor will keep you interested in the art and science of making products safer. Whether you read the book cover-to-cover or jump around, the book's relatable and practical approach will help you learn a lot about making products safe. Designing for Safe Use is a primer that will spark in readers a strong appreciation for the need to design safety into products. Mannke,Romeela Mohee,Veronika Schulte,Dinesh

Surroop,2013-06-04 The book addresses the perceived need for a publication with looks at both, climate smart technologies and the integration of renewable energy and energy efficiency in mitigation and adaptation responses. Based on a set of papers submitted as part of the fifth on-line climate conference (CLIMATE 2012) and a major conference on renewable energy on island States held in Mauritius in 2012, the book provides a wealth of information on climate change strategies and the role of smart technologies. The book has been produced in the context of the project Small Developing Island Renewable Energy Knowledge and Technology Transfer Network (DIREKT), funded by the ACP Science and Technology Programme, an EU programme for cooperation between the European Union and the ACP region.

Forest Tenure Reform in Asia and Africa Randall

Bluffstone,Elizabeth J.Z. Robinson,2014-11-13 Forest tenure reforms are occurring in many developing countries around the

world. These reforms typically include devolution of forest lands to local people and communities, which has attracted a great deal of attention and interest. While the nature and level of devolution vary by country, all have potentially important implications for resource allocation, local ecosystem services, livelihoods and climate change. This book helps students, researchers and professionals to understand the importance and implications of these reforms for local environmental quality, climate change, and the livelihoods of villagers, who are often poor. It is shown that local forest management can often be more successful than top-down management of common pool forest resources. The relationship of local forest tenure reform to the important climate change initiative REDD+ is also considered. The work includes a number of generic chapters and also detailed case studies from China, Ethiopia, Kenya, Nepal, Tanzania and Uganda. Using specific examples and a wide variety of disciplinary perspectives, including quantitative and qualitative analytical methods, the book provides an authoritative and critical picture of local forest reforms in light of the key challenges humanity faces today.
