Measuring Racial Discrimination National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Methods for Assessing Discrimination, 2004-07-24 Many racial and ethnic groups in the United States, including blacks, Hispanics, Asians, American Indians, and others, have historically faced severe discrimination—pervasive and open denial of civil, social, political, educational, and economic opportunities. Today, large differences among racial and ethnic groups continue to exist in employment, income and wealth, housing, education, criminal justice, health, and other areas. While many factors may contribute to such differences, their size and extent suggest that various forms of discriminatory treatment persist in U.S. society and serve to undercut the achievement of equal opportunity. *Measuring Racial Discrimination* considers the definition of race and racial discrimination, reviews the existing techniques used to measure racial discrimination, and identifies new tools and areas for future research. The book conducts a thorough evaluation of current methodologies for a wide range of circumstances in which racial discrimination may occur, and makes recommendations on how to better assess the presence and effects of discrimination.

Poverty in Belgium Danielle Dierckx, Nicolas van Herck, Jan Vranken, 2010 During the second half of 2010, Belgium will take on the Presidency of the European Union. That this tenure happens to coincide with the 'European Year for Combating Poverty and Social Exclusion' offers an ideal opportunity to devote special attention to the problem of poverty and social exclusion as it currently exists in Belgium, as well as to the question of how the fight against poverty is being conducted there. At the same time, these

events are an incentive to assess the poverty situation and the poverty policy in the country with reference to the European context. This book presents an overview of recent facts and figures, policy measures and scientific research about poverty and social exclusion in Belgium. What exactly is the level of poverty in the country? What are the most important Belgian policy measures at this time? What role has been assigned to the Federal Government in the fight against poverty? We are providing answers to these and other questions by making reference to concrete topics such as health, debt mediation, child poverty a.o.

Privacy on the Ground Kenneth A. Bamberger, Deirdre K. Mulligan, 2015-10-23 An examination of corporate privacy management in the United States, Germany, Spain, France, and the United Kingdom, identifying international best practices and making policy recommendations. Barely a week goes by without a new privacy revelation or scandal. Whether by hackers or spy agencies or social networks, violations of our personal information have shaken entire industries, corroded relations among nations, and bred distrust between democratic governments and their citizens. Polls reflect this concern, and show majorities for more, broader, and stricter regulation—to put more laws “on the books.” But there was scant evidence of how well tighter regulation actually worked “on the ground” in changing corporate (or government) behavior—until now. This intensive five-nation study goes inside corporations to examine how the people charged with protecting privacy actually do their work, and what kinds of regulation effectively shape their behavior. And the research yields a surprising result. The countries with more ambiguous regulation—Germany and the United States—had the strongest corporate privacy management practices, despite very different cultural and legal environments. The more

rule-bound countries—like France and Spain—trended instead toward compliance processes, not embedded privacy practices. At a crucial time, when Big Data and the Internet of Things are snowballing, *Privacy on the Ground* helpfully searches out the best practices by corporations, provides guidance to policymakers, and offers important lessons for everyone concerned with privacy, now and in the future.

Privacy and Employment Law John DR Craig, 1999-12 Drug testing, surveillance of staff and their communications, attempts to censor the freedom of speech of employees, psychometric or personality testing, and requirements to provide intimate health information irrelevant to work in order to obtain employment or promotion are some of the dubious and perhaps illegal management practices that Toronto lawyer Craig examines in Britain, France, the US, and Canada. He describes how human rights perspectives are being transposed into employment law. US distribution is by ISBS. Annotation copyrighted by Book News, Inc., Portland, OR

Regulating Technologies Roger Brownsword, Karen Yeung, 2008-10-23 While it is a truism that emerging technologies present both opportunities for and challenges to their host communities, the legal community has only recently begun to consider their significance. On the one hand, emerging information, bio, nano, and neurotechnologies challenge policy-makers who aspire to put in place a regulatory environment that is legitimate, effective, and sustainable; on the other hand, these same

technologies offer new opportunities as potentially powerful regulatory instruments. In this unique volume, a team of leading international scholars address many of the key difficulties surrounding the regulation of emerging technological targets as well as the implications of adopting technology as a regulatory tool. How should we rise to the challenge of regulating technologies? How are the regulatory lines to be drawn in the right places and how is the public to be properly engaged? How is precaution to be accommodated, and how can the law keep pace with technologies that develop ahead of the regulatory environment? How readily should we avail ourselves of the opportunity to use technology as a regulative strategy? How are we to understand these strategies and the challenges which they raise? To what extent do they give rise to similar policy problems accompanying more 'traditional' regulatory instruments or generate distinctive challenges? While the criminal justice system increasingly relies on technological assistance and the development of a 'surveillance society', is a regulatory regime that rules by technology compatible with rule of law values?

EU Internet Law Tatiana-Eleni Synodinou,Philippe Jouglex,Christiana Markou,Thalia Prastitou,2017-11-09 This book provides an overview of recent and future legal developments concerning the digital era, to examine the extent to which law has or will further evolve in order to adapt to its new digitalized context. More specifically it focuses on some of the most important legal issues found in areas directly connected with the Internet, such as intellectual property, data protection, consumer law, criminal law and cybercrime, media law and, lastly, the enforcement and application of law. By adopting this horizontal approach, it highlights – on the basis of analysis and commentary of recent and future EU legislation as well

as of the latest CJEU and ECtHR case law – the numerous challenges faced by law in this new digital era. This book is of great interest to academics, students, researchers, practitioners and policymakers specializing in Internet law, data protection, intellectual property, consumer law, media law and cybercrime as well as to judges dealing with the application and enforcement of Internet law in practice.

Production in the Innovation Economy Richard M. Locke, Rachel L. Wellhausen, 2014-01-03 Reports from an ambitious MIT research project that makes the case for encouraging the colocation of manufacturing and innovation. *Production in the Innovation Economy* emerges from several years of interdisciplinary research at MIT on the links between manufacturing and innovation in the United States and the world economy. Authors from political science, economics, business, employment and operations research, aeronautics and astronautics, and nuclear engineering come together to explore the extent to which manufacturing is key to an innovative and vibrant economy. Chapters include survey research on gaps in worker skill development and training; discussions of coproduction with Chinese firms and participation in complex manufacturing projects in China; analyses of constraints facing American start-up firms involved in manufacturing; proposals for a future of distributed manufacturing and a focus on product variety as a marker of innovation; and forecasts of powerful advanced manufacturing technologies on the horizon. The chapters show that although the global distribution of manufacturing is not an automatic loss for the United

States, gains from the colocation of manufacturing and innovation have not disappeared. The book emphasizes public policy that encourages colocation through, for example, training programs, supplements to private capital, and interfirm cooperation in industry consortia. Such approaches can help the United States not only to maintain manufacturing capacity but also, crucially, to maximize its innovative potential. Contributors Joyce Lawrence, Richard K. Humans Are Underrated Geoff Colvin, 2016-10-11 It's easy to imagine a nightmare scenario in which computers simply take over most of the tasks that people now get paid to do. The unavoidable question—will millions of people lose out, unable to best the machine?—is increasingly dominating business, education, economics, and policy. The bestselling author of *Talent Is Overrated* explains how the skills and economy values are changing in historic ways and offers a guide to what's next for all workers. Mastering technical skills that have historically been in demand no longer differentiates us as it used to. Instead, our greatest advantage lies in our deepest, most essentially human abilities—empathy, creativity, social sensitivity, storytelling, humor, relationship building, and expressing ourselves with greater power than logic can ever achieve. These high-value skills create tremendous competitive advantage—more devoted customers, stronger cultures, breakthrough ideas, and more effective teams. And while many of us regard these abilities as innate traits, it turns out they can all be developed. As Colvin shows, they're already being developed in a range of farsighted organizations, including the Cleveland Clinic, the U.S. Army,

and Stanford Business School.

Can We Afford to Grow Old? Ary Lans Bovenberg, A. S. M. van der Linden, 1997

My Way or the Highway Harry E.

Chambers, 2004-11-01 By the author of the bestselling *Bad Attitude Survival Guide* (more than 40,000 copies sold), named one of the top business books of 1998 by Executive Book Summaries Everyone thinks they know what micromanagement is, but this book presents a specific, detailed definition illustrated with concrete examples Offers successful strategies for overcoming your own micromanaging behavior and for responding when you are being micromanaged Micromanagement is one of the most widely condemned managerial sins, and one of the most common employee complaints. It results in significant direct, indirect, and hidden costs to organizations, contributing to low morale, high turnover, inefficiency, instability, and lack of continuity. And being perceived as a micromanager can have a significant negative impact on your career. But what, precisely, is micromanagement? More importantly, what can be done about it? In *My Way or the Highway*, Harry Chambers proves that micromanagement can be objectively identified and successfully resisted, both by those who (often unknowingly) inflict it and by those who are its victims. In an informal, entertaining style Chambers describes five specific defining traits of micromanagers: placing their own self interest above everything else; controlling and manipulating time; attempting to determine exactly how everything must be done; requiring elaborate approval processes; and establishing dysfunctional monitoring and reporting requirements. He even provides a Micromanagement Potential Indicator test so you can see whether (and to what extent) you might be a

micromanager. He then devotes a chapter to each trait, providing real-world examples of the trait in action and an analysis of the damage it does. But this is not just a book of diagnosis—Chambers provides treatment as well. He devotes several chapters how to respond if you are the micromanagee (a victim of micromanagement), how to eliminate your own micromanaging behaviors, and what to do if you have to manage a micromanager. Avoiding micromanagement should be a major goal of every manager, would-be manager, team member, or collaborative peer. *My Way or the Highway* offers detailed, actionable, field-tested strategies that will eliminate the damage that overcontrolling behavior causes and increase creativity, risk-taking, productivity, and initiative in any organization.

Managing Henry Mintzberg, 2009-09 A half century ago Peter Drucker put management on the map. Leadership has since pushed it off. Henry Mintzberg aims to restore management to its proper place: front and center. “We should be seeing managers as leaders,” Mintzberg writes, “and leadership as management practiced well.” This landmark book draws on Mintzberg’s observations of twenty-nine managers, in business, government, health care, and the social sector, working in settings ranging from a refugee camp to a symphony orchestra. What he saw—the pressures, the action, the nuances, the blending—compelled him to describe managing as a practice, not a science or a profession, learned primarily through experience and rooted in context. But context cannot be seen in the usual way. Factors such as national culture and level in hierarchy, even personal style, turn out to have less influence than we have traditionally thought. Mintzberg looks at how to deal with some of the inescapable conundrums of managing, such as, How can

you get in deep when there is so much pressure to get things done? How can you manage it when you can't reliably measure it? This book is vintage Mintzberg: iconoclastic, irreverent, carefully researched, myth-breaking. Managing may be the most revealing book yet written about what managers do, how they do it, and how they can do it better.

Seth Price Seth Price, 2017 This catalogue is the first comprehensive publication on Price's varied oeuvre. It offers an unflinching portrait of contemporary, mediated Western life. The exhibition at Stedelijk Museum is the first survey of the American artist's work. A key theme in Price's work is the self under technological pressure. This is often expressed in terms of the 'skins' of surface, packaging, and wrapping: a photographic study of a person's skin obtained through the technologies Google employs for mapping; a vacuum-formed plastic relief presenting a body part stranded in plastic; a large wall sculpture depicting the negative space between two people engaged in intimate action, greatly enlarged from a tiny internet jpeg. 'Seth Price is a key figure in addressing technology and artistic authorship. His work traces an important art historical shift from the concept of collage, where chance played a major role and the image was constructed of multiple layers, to the concept of a unified image, which envelops us in an endless, undifferentiated, digital stream.' - Beatrix Ruf, Director of Stedelijk Museum Published on the occasion of the exhibition Seth Price: Social Synthetic, at Stedelijk Museum, Amsterdam (15 April - 3 September 2017), and at Museum Brandhorst, Munich (12 October 2017 - 18 March 2018).

European Community Trademark: Commentary to the European Community Regulations Miguel A. Baz, 1997-11-26 An established trademark indicates quality and provides valuable recognition for trade and sales promotion. Without adequate protection, these essential functions are jeopardized. The need for unification in this area, especially in Europe, can no longer be ignored. The Community Directive and Regulation are the response to this need. This commentary provides the texts of essential legislation and offers an analysis of the Directive and Regulation in their historical context. Coverage includes issues such as: grounds for refusal entitlement registration procedures jurisdiction and procedure in legal actions the impact of the Community trademark on applicants from non-member countries The transformation of the Council Directive and the Commission Regulations into national laws in many Member States of the European Union (EU) enhances the value of European Community Trade Mark in the interpretation and analysis of national European trademark laws. Written by leading European experts in the

field, this commentary provides an invaluable tool for practitioners, scholars, and marketing managers in interpreting the Community provisions in this specialized, critical area. It is unique in its coupling of a strong theoretical background with the experience of contributors from diverse legal and practical cultures.

Women's Access to Political Power in Post-Communist Europe Richard E. Matland, Kathleen A. Montgomery, 2003-05-01 This book considers women's access to formal positions of powers in the newly formed democracies of post communist Europe. While acknowledging the relevance of recent history, this book takes an important step away from the communist legacy and explicitly argues for a framework based on causal variables identified in the existing literatures from industrialized democracies on women and politics and legislative recruitment After a brief introduction, the second chapter sets forth a general theoretical framework, which posits that the level of female legislative representation in a given country is a function of the relative supply of and demand for female candidates. After a chapter considering a broad overview of public opinion on women and politics in Eastern Europe, thirteen country chapters, spanning the spectrum of Eastern European democracies, address and test hypotheses about the key variables affecting the supply and demand sides of the equation in individual countries. Relevant aspects of the communist cultural and developmental legacy are addressed, but authors give particular attention to political factors, such as electoral rules and the characteristics of the emerging party systems, that vary within the Eastern European countries. The new democracies of Eastern Europe provide a novel context in which to test and extend our theories about the consequences of political institutions for the quality of

democracy. Since institutional arrangements are more malleable than developmental or cultural characteristics, those variables also offer the greatest promise to scholars and practitioners wondering what can be done to improve women's access to formal arenas of political power? How can we build democracies that are stable, lasting and representative? A careful analysis of the post-communist context can help us to address issues concerning institutional design and development that has relevance well beyond the Eastern European context.
