Windows 2012 Server Network Security Derrick Rountree,2013-03-19 Windows 2012 Server Network Security provides the most in-depth guide to deploying and maintaining a secure Windows network. The book drills down into all the new features of Windows 2012 and provides practical, hands-on methods for securing your Windows systems networks, including: Secure remote access Network vulnerabilities and mitigations DHCP installations configuration MAC filtering DNS server security WINS installation configuration Securing wired and wireless connections Windows personal firewall Remote desktop services Internet connection sharing Network diagnostics and troubleshooting Windows network security is of primary importance due to the sheer volume of data residing on Windows networks. Windows 2012 Server Network Security provides network administrators with the most focused and in-depth coverage of Windows network security threats along with methods and techniques for securing important mission-critical networks and assets. The book also covers Windows 8. Provides practical examples of how to secure your Windows network. Focuses specifically on Windows network security rather than general concepts. One of the first books to cover Windows Server 2012 network security.

Proceedings of the Ninth International Network Conference (INC 2012) Paul Dowland,Steven Furnell,Reinhardt Botha,2012 This book contains the proceedings of the Ninth International Network Conference (INC2012), which was held in Port Elizabeth, South Africa, in July 2012. A total of 20 papers were accepted for inclusion in the conference, and they are presented here in four themed chapters. The main topics of the book include: Network Technologies; Mobile and Wireless Networking; Security and Privacy; Applications and Impacts. The papers address state-of-the-art research and applications of network technology, arising from both the academic and

industrial domains. These proceedings should consequently be of interest to network practitioners, researchers, academics, and technical managers involved in the design, development and use of network systems.

   The Future Internet Alex Galis,Anastasius Gavras,2013-04-22 Co-editors of the volume are: Federico Álvarez, Alessandro Bassi, Michele Bezzi, Laurent Ciavaglia, Frances Cleary, Petros Daras, Hermann De Meer, Panagiotis Demestichas, John Domingue, Theo G. Kanter, Stamatis Karnouskos, Srdjan Krčo, Laurent Lefevre, Jasper Lentjes, Man-Sze Li, Paul Malone, Antonio Manzalini, Volkmar Lotz, Henning Müller, Karsten Oberle, Noel E. O'Connor, Nick Papanikolaou, Dana Petcu, Rahim Rahmani, Danny Raz, Gaël Richards, Elio Salvadori, Susana Sargento, Hans Schaffers, Joan Serrat, Burkhard Stiller, Antonio F. Skarmeta, Kurt Tutschku, Theodore Zahariadis The Internet is the most vital scientific, technical, economic and societal set of infrastructures in existence and in operation today serving 2.5 billion users. Continuing its developments would secure much of the upcoming innovation and prosperity and it would underpin the sustainable growth in economic values and volumes needed in the future. Future Internet infrastructures research is therefore a must. The Future Internet Assembly (FIA) is a successful conference that brings together participants of over 150 research projects from several distinct yet interrelated areas in the European Union Framework Programme 7 (FP7). The research projects are grouped as follows: the network of the future as infrastructure connecting and orchestrating the future Internet of people, computers, devices, content, clouds and things; cloud computing, Internet of Services and advanced software engineering; the public-private partnership projects on Future Internet; Future Internet Research and Experimentation (FIRE). The 26 full papers included in this volume were selected from 45 submissions. They are organized in topical sections named: software driven networks, virtualization, programmability and autonomic

management; computing and networking clouds; internet of things; and enabling technologies and economic incentives.

Network and Parallel Computing Ching-Hsien Hsu,Xuanhua Shi,Valentina Salapura,2014-08-23 This book constitutes the proceedings of the 11th IFIP WG 10.3 International Conference on Network and Parallel Computing, NPC 2014, held in Ilan, Taiwan, in September 2014. The 42 full papers and 24 poster papers presented were carefully reviewed and selected from 196 submissions. They are organized in topical sections on systems, networks, and architectures, parallel and multi-core technologies, virtualization and cloud computing technologies, applications of parallel and distributed computing, and I/O, file systems, and data management.

Modeling and Simulation of Computer Networks and Systems Mohammad S. Obaidat,Faouzi Zarai,Petros Nicopolitidis,2015-04-21 Modeling and Simulation of Computer Networks and Systems: Methodologies and Applications introduces you to a broad array of modeling and simulation issues related to computer networks and systems. It focuses on the theories, tools, applications and uses of modeling and simulation in order to effectively optimize networks. It describes methodologies for modeling and simulation of new generations of wireless and mobiles networks and cloud and grid computing systems. Drawing upon years of practical experience and using numerous examples and illustrative applications recognized experts in both academia and industry, discuss: Important and emerging topics in computer networks and systems including but not limited to; modeling, simulation, analysis and security of wireless and mobiles networks especially as they relate to next generation wireless networks Methodologies, strategies and tools, and strategies needed to build computer networks and systems modeling and simulation from the bottom up Different network performance metrics including, mobility, congestion, quality of service, security and more... Modeling and Simulation of

Computer Networks and Systems is a must have resource for network architects, engineers and researchers who want to gain insight into optimizing network performance through the use of modeling and simulation. Discusses important and emerging topics in computer networks and Systems including but not limited to; modeling, simulation, analysis and security of wireless and mobiles networks especially as they relate to next generation wireless networks Provides the necessary methodologies, strategies and tools needed to build computer networks and systems modeling and simulation from the bottom up Includes comprehensive review and evaluation of simulation tools and methodologies and different network performance metrics including mobility, congestion, quality of service, security and more

Windows Server 2012 R2 Pocket Consultant Volume 2 William Stanek,2014-01-15 Portable and precise, this pocket-sized guide delivers ready answers for administering storage, security, and networking features in Windows Server 2012 R2. Zero in on core tasks through quick-reference tables, instructions, and lists. You'll get the focused information you need to save time and get the job done - whether at your desk or in the field. Coverage includes: Managing file systems and drives Configuring storage Data sharing Managing TCP/IP networking Running DHCP clients and servers Optimizing DNS Administering network printers and print services Security, compliance, and auditing Backup and recovery

Evolutionary Computation in Gene Regulatory Network Research Hitoshi Iba,Nasimul Noman,2016-01-21 Introducing a handbook for gene regulatory network research using evolutionary computation, with applications for computer scientists, computational and system biologists This book is a step-by-step guideline for research in gene regulatory networks (GRN) using evolutionary computation (EC). The book is organized into four parts that deliver materials in a way equally attractive for a reader with training in computation or biology.

Each of these sections, authored by well-known researchers and experienced practitioners, provides the relevant materials for the interested readers. The first part of this book contains an introductory background to the field. The second part presents the EC approaches for analysis and reconstruction of GRN from gene expression data. The third part of this book covers the contemporary advancements in the automatic construction of gene regulatory and reaction networks and gives direction and guidelines for future research. Finally, the last part of this book focuses on applications of GRNs with EC in other fields, such as design, engineering and robotics. • Provides a reference for current and future research in gene regulatory networks (GRN) using evolutionary computation (EC) • Covers sub-domains of GRN research using EC, such as expression profile analysis, reverse engineering, GRN evolution, applications • Contains useful contents for courses in gene regulatory networks, systems biology, computational biology, and synthetic biology • Delivers state-of-the-art research in genetic algorithms, genetic programming, and swarm intelligence Evolutionary Computation in Gene Regulatory Network Research is a reference for researchers and professionals in computer science, systems biology, and bioinformatics, as well as upper undergraduate, graduate, and postgraduate students. Hitoshi Iba is a Professor in the Department of Information and Communication Engineering, Graduate School of Information Science and Technology, at the University of Tokyo, Toyko, Japan. He is an Associate Editor of the IEEE Transactions on Evolutionary Computation and the journal of Genetic Programming and Evolvable Machines. Nasimul Noman is a lecturer in the School of Electrical Engineering and Computer Science at the University of Newcastle, NSW, Australia. From 2002 to 2012 he was a faculty member at the University of Dhaka, Bangladesh. Noman is an Editor of the BioMed Research International journal. His research interests include computational biology, synthetic biology, and

bioinformatics.

NETWORKING 2012 Workshops Zdenek Becvar,Robert Bestak,Lukas Kencl,2012-05-20 This book constitutes the refereed proceedings of three workshops colocated with NETWORKING 2012, held in Prague, Czech Republic, in May 2012: the Workshop on Economics and Technologies for Inter-Carrier Services (ETICS 2012), the Workshop on Future Heterogeneous Network (HetsNets 2012), and the Workshop on Computing in Networks (CompNets 2012). The 21 revised full papers presented were carefully reviewed and selected from numerous submissions. The papers cover a wide range of topics addressing the main research efforts in the fields of network management, quality of services, heterogeneous networks, and analysis or modeling of networks.

Security in Fixed and Wireless Networks Guenter Schaefer,Michael Rossberg,2016-08-05 Introduces aspects on security threats and their countermeasures in both fixed and wireless networks, advising on how countermeasures can provide secure communication infrastructures. Enables the reader to understand the risks of inappropriate network security, what mechanisms and protocols can be deployed to counter these risks,

and how these mechanisms and protocols work.

The Psychology of Social Networking Vol.1 Giuseppe Riva,Brenda K. Wiederhold,Pietro Cipresso,2015-01-01 Using a novel approach to consider the available literature and research, this book focuses on the psychology of social media based on the assumption that the experience of being in a social media has an impact on both our identity and social relationships. In order to 'be online', an individual has to create an online presence – they have to share information about themselves online. This online self is presented in different ways, with diverse goals and aims in order to engage in different social media activities and to achieve desired outcomes. Whilst this may not be a real physical presence, that physicality is becoming increasingly replicated through photos, video, and ever-evolving ways of defining and describing the self online. Moreover, individuals are using both PC-based and mobile-based social media as well as increasingly making use of photo and video editing tools to carefully craft and manipulate their online self. This book therefore explores current debates in Cyberpsychology, drawing on the most up-to-date theories and research to explore four main aspects of the social media experience (communication, identity, presence and relationships). In doing so, it considers the interplay of different areas of psychological research with current technological and security insight into how individuals create, manipulate and maintain their online identity and relationships. The social media are therefore at the core of every chapter, with the common thread throughout being the very unique approach to considering diverse and varied online behaviours that may not have been thus far considered from this perspective. It covers a broad range of both positive and negative behaviours that have now become integrated into the daily lives of many westernised country's Internet users, giving it an appeal to both scholarly and industry readers alike.

Intelligent Data Engineering and Automated Learning -- IDEAL 2012 Hujun Yin,Jose A.F. Costa,Guilherme Barreto,2012-08-01 This book constitutes the refereed proceedings of the 13th International Conference on Intelligent Data Engineering and Automated Learning, IDEAL 2012, held in Natal, Brazil, in August 2012. The 100 revised full papers presented were carefully reviewed and selected from more than 200 submissions for inclusion in the book and present the latest theoretical advances and real-world applications in computational intelligence.

Advances in Secure Computing, Internet Services, and Applications Tripathy, B.K.,2013-12-31 Technological advancements have extracted a vast amount of useful knowledge and information for applications and services. These developments have evoked intelligent solutions that have been utilized in efforts to secure this data and avoid potential complex problems. Advances in Secure Computing, Internet Services, and Applications presents current research on the applications of computational intelligence in order to focus on the challenge humans face when securing knowledge and data. This book is a vital reference source for researchers, lecturers, professors, students, and developers, who have interest in secure computing and recent advanced in real life applications.

Integrating Sustainability Thinking in Science and Engineering Curricula Walter Leal Filho,Ulisses M. Azeiteiro,Sandra Caeiro,Fátima Alves,2014-09-13 Including considerations of sustainability in universities' activities has long since become mainstream. However, there is still much to be done with regard to the full integration of sustainability thinking into science and engineering curricula. Among the problems that

hinder progress in this field, the lack of sound information on how to actually implement it is prominent. Created in order to address this need, this book presents a wealth of information on innovative approaches, methods and tools that may be helpful in translating sustainability principles into practice.

Autocratic and Democratic External Influences in Post-Soviet Eurasia Anastassia Obydenkova,Alexander Libman,2016-03-09 As the Ukrainian Crisis shows both political regimes and national borders in Eurasia are still in a state of flux. Bringing together literatures on the external influences of democratization, the post-Soviet space and support for autocracy Autocratic and Democratic External influences in Post-Soviet Eurasia provides a comprehensive overview of the interaction of domestic and international politics during times of regime transition. Demonstrating the interplay of these forces the book explores the rich variation in motives and channels of autocratic and democratic influences. International scholars consider two channels of external influence on regime transition; the role of supranational organizations established by non-democracies and the role of non-governmental organizations and through a set of carefully chosen case studies offer a new theoretical discussion on the phenomenon of multi-level regime transition.

Success with STEM Sue Howarth,Linda Scott,2014-11-13 Success with STEM is an essential resource, packed with advice and ideas to support and enthuse all those involved in the planning and delivery of STEM in the secondary school. It offers guidance on current issues and priority areas to help you make informed judgements about your own practice and argue for further support for your subject in school. It explains current initiatives to enhance STEM teaching and offers a wide range of practical activities to support exciting teaching and learning in and beyond the classroom. Illustrated with examples of successful projects in real schools, this friendly, inspiring book explores: Innovative teaching ideas to make lessons buzz Activities for

successful practical work Sourcing additional funding Finding and making the most of the best resources STEM outside the classroom Setting-up and enhancing your own STEM club Getting involved in STEM competitions, fairs and festivals Promoting STEM careers and tackling stereotypes Health, safety and legal issues Examples of international projects An wide-ranging list of project and activity titles Enriched by the authors' extensive experience and work with schools, Success with STEM is a rich compendium for all those who want to develop outstanding lessons and infuse a life-long interest in STEM learning in their students. The advice and guidance will be invaluable for all teachers, subject leaders, trainee teachers and NQTs.

Security and Privacy in Smart Sensor Networks Maleh, Yassine,Ezzati, Abdellah,Belaissaoui, Mustapha,2018-05-09 Security and privacy protection within computer networks can be a challenge. By examining the current problems and challenges this domain is facing, more efficient strategies can be established to safeguard personal information against invasive pressures. Security and Privacy in Smart Sensor Networks is a critical scholarly resource that examines recent developments and emerging trends in smart sensor security and privacy by providing new models, practical solutions, and technological advances related to security. Featuring coverage on a broad range of topics such as cloud security, encryption, and intrusion detection systems, this book is geared towards academicians, engineers, IT specialists, researchers, and students seeking current research on authentication and intrusion detection.

The Social Citizen Betsy Sinclair,2012-12-10 Human beings are social animals. Yet despite vast amounts of research into political decision making, very little attention has been devoted to its social dimensions. In political science, social relationships are generally thought of as mere sources of information, rather than active influences on one's political decisions. Drawing upon data from settings as diverse as South Los Angeles and Chicago's

wealthy North Shore, Betsy Sinclair shows that social networks do not merely inform citizen's behavior, they can—and do—have the power to change it. From the decision to donate money to a campaign or vote for a particular candidate to declaring oneself a Democrat or Republican, basic political acts are surprisingly subject to social pressures. When members of a social network express a particular political opinion or belief, Sinclair shows, others notice and conform, particularly if their conformity is likely to be highly visible. We are not just social animals, but social citizens whose political choices are significantly shaped by peer influence. The Social Citizen has important implications for our concept of democratic participation and will force political scientists to revise their notion of voters as socially isolated decision makers.
