Douglas Schuler, Peter Day

The Rise of the Network Society Manuel Castells,2011-08-24 This first book in Castells' groundbreaking trilogy, with a substantial new preface, highlights the economic and social dynamics of the information age and shows how the network society has now fully risen on a global scale. Groundbreaking volume on the impact of the age of information on all aspects of society Includes coverage of the influence of the internet and the net-economy Describes the accelerating pace of innovation and social transformation Based on research in the USA, Asia, Latin America, and Europe

The Network Society Manuel Castells,2004 Manuel Castells has drawn together a group of contributors to explore the patterns and dynamics of the network society in its cultural and institutional diversity.

The Network Society Darin Barney,2013-05-20 In *The Network Society*, Darin Barney provides a compelling examination of the social, political and economic implications of network technologies and their application across a wide range of practices and institutions. Are we in the midst of a digital revolution? Have new information and communication technologies given birth to a new form of society, or do they reinforce and extend existing patterns and relationships? This book provides a clear and engaging discussion of these and other questions. Using a sophisticated model of the relationship between technology and society, Barney investigates both what has changed, and what has remained the same, in the age of the Internet. Among the issues discussed are debates concerning the emergence of a 'knowledge economy'; digital restructuring of employment and work; globalization and the status of the nation-state; the prospects of digital democracy; the digital divide; new social movements; and culture, community and identity in the age of new media. This book provides an accessible resource for a thoughtful engagement with life in the network society. It will be essential reading for students in sociology and media and communication studies. This will be a valuable textbook for undergraduate students of sociology and media and communication studies.

The Network Society Manuel Castells,Gustavo Cardoso,2006 This volume explores the patterns and dynamics of the network society in its policy dimension, ranging from the knowledge economic, based in technology and innovation, to the organizational reform and modernization in the public sector, focusing also the media and communication policies. The Network Society is our society, a society made of individuals, businesses and state operating from the local, national and into the international arena.

Learning In a Networked Society Yael Kali,Ayelet Baram-Tsabari,Amit M. Schejter,2019-04-26 One of the most significant developments in contemporary education is the view that knowing and understanding are anchored in cultural practices within communities. This shift coincides with technological advancements that have reoriented end-user computer interaction from individual work to communication, participation and collaboration. However, while daily interactions are increasingly engulfed in mobile and networked Information and Communication Technologies (ICT), in-school learning interactions are, in comparison, technologically impoverished, creating the phenomenon known as the school-society digital disconnect. This volume argues that the theoretical and practical tools of scientists in both the social and educational sciences must be brought together in order to examine what types of interaction, knowledge construction, social organization and power structures: (a) occur spontaneously in technology-enhanced learning (TEL) communities or (b) can be created by design of TEL. This volume seeks to equip scholars and researchers within the fields of education, educational psychology, science communication, social welfare, information sciences, and instructional design, as well as practitioners and policy-makers, with empirical and theoretical insights, and evidence-based support for decisions providing learners and citizens with 21st century skills and knowledge, and supporting well-being in today's information-based networked society.

Working-Class Network Society Jack Linchuan Qiu,2023-09-19 An examination of how the availability of low-end information and communication technology has provided a basis for the emergence of a working-class network society in China. The idea of the “digital divide,” the great social division between information haves and have-nots, has dominated policy debates and scholarly analysis since the 1990s. In *Working-Class Network Society*, Jack Linchuan Qiu describes a more complex social and technological reality in a newly mobile, urbanizing China. Qiu argues that as inexpensive Internet and mobile phone services become available and are closely integrated with the everyday work and life of low-income communities, they provide a critical seedbed for the emergence of a new working class of “network labor” crucial to China's economic boom. Between the haves and have-nots, writes Qiu, are the information “have-less”: migrants, laid-off workers, micro-entrepreneurs, retirees, youth, and others, increasingly connected by cybercafés, prepaid service, and used mobile phones. A process of class formation has begun that has important implications for working-class network society in China and beyond. Qiu brings class back into the scholarly discussion, not as a secondary factor but as an essential dimension in our understanding of communication technology as it is shaped in the vast, industrializing society of China. Basing his analysis on his more than five years of empirical research conducted in twenty cities, Qiu examines technology and class, networked connectivity and public policy, in the context of massive urban reforms that affect the new working class disproportionately. The transformation of Chinese society, writes Qiu, is emblematic of the new technosocial reality emerging in much of the Global South.

Shaping the Network Society Douglas Schuler,Peter Day,2003-01-01 How computer professionals and communities can work together to shape sociotechnical systems that will meet society's challenges. Information and computer technologies are used every day by real people with real needs. The authors contributing to *Shaping the Network Society* describe how technology can be used effectively by communities, activists, and citizens to meet society's challenges. In their vision, computer professionals are concerned less with bits, bytes, and algorithms and more with productive partnerships that engage both researchers and community activists. These collaborations are producing important sociotechnical work that will affect the future of the network society. Traditionally, academic research on real-world users of technology has been neglected or even discouraged. The authors contributing to this book are working to fill this gap; their theoretical and practical discussions illustrate a new orientation—research that works with people in their natural social environments, uses common language rather than rarefied academic discourse, and takes a pragmatic perspective. The topics they consider are key to democratization and social change. They include human rights in the global billboard society; public computing in Toledo, Ohio; public digital culture in Amsterdam; civil networking in the former Yugoslavia; information technology and the international public sphere; historical archaeologies of community networks; technobiographical reflections on the future; libraries as information commons; and globalization and media democracy, as illustrated by Indymedia, a global collective of independent media organizations.

Digital Communities in a Networked Society Manuel J. Mendes,Reima Suomi,Carlos Passos,2006-04-11 *Digital Communities in a Networked Society: e-Commerce, e-Business and e-Government* deals with the accelerating evolution in the computerization of society. This evolution, or should we call it a revolution, is dominantly driven by the Internet, and documented by the novelties introduced, year by year, by Information and Communication Technologies. The book contains recent results of research and development in the areas of: -E-government, -Business models of e-applications, -Innovative structures in the internet, -Auctions and e-payment, -Future aspects of communication, -Internet and the web, -Advanced platforms and grid computing, -Cooperation and integration, -Modeling and construction of e-services.

The Network Society Jan van Dijk,2012-05-14 *The Network Society* is now more than ever the essential guide to the past, consequences and future of digital communication. Fully revised, this Third Edition covers crucial new

issues and updates. This book remains an accessible, comprehensive, must-read introduction to how new media function in contemporary society.

The Network Society Louis Albrechts, Seymour Mandelbaum, 2007-05-07 Essential reading for graduate level courses in urban studies, city and regional planning, and urban design, Albrecht and Mandelbaum's text examines the challenges that the new paradigm of the Network Society create for Urban and Regional Planning.

24/7 Robert Hassan, 2007 24/7 is the first collection of essays dealing with the nature and our experience of temporality in the network society.

Internet and Democracy in the Network Society Jan A.G.M. van Dijk, Kenneth L. Hacker, 2018-06-04 A seminal shift has taken place in the relationship between Internet usage and politics. At the turn of the century, it was presumed that digital communication would produce many positive political effects like improvements to political information retrieval, support for public debate and community formation or even enhancements in citizen participation in political decision-making. While there have been positive effects, negative effects have also occurred including fake news and other political disinformation, social media appropriation by terrorists and extremists, 'echo-chambers' and filter bubbles, elections influenced by hostile hackers and campaign manipulation by micro-targeting marketing. It is time for critical re-evaluation. Designed to encourage critical thinking on the part of the student, internationally recognized experts, Jan A.G.M. van Dijk and Kenneth Hacker, chronicle the political significance of new communication technologies for the promotion of democracy over the last two decades. Drawing upon structuration theory and network theory and real-world case studies from across the globe, the book is logically structured around the following topics: Political Participation and Inclusion Habermas and the Reconstruction of Public Space Media and Democracy in Authoritarian States Democracy and the Internet in China E-government and democracy Views of democracy and Internet use Underpinned by up-to-date literature, this important textbook is aimed at students and scholars of communication studies, political science, sociology, political communication, and international relations.

Privacy and Identity in a Networked Society Stefan Strauß, 2019-04-16 This book offers an analysis of privacy impacts resulting from and reinforced by technology and discusses fundamental risks and challenges of protecting privacy in the digital age. Privacy is among the most endangered species in our networked society: personal information is processed for various purposes beyond our control. Ultimately, this affects the natural interplay between privacy, personal identity and identification. This book investigates that interplay from a systemic, socio-technical perspective by combining research from the social and computer sciences. It sheds light on the basic functions of privacy, their relation to identity, and how they alter with digital identification practices. The analysis reveals a general privacy control dilemma of (digital) identification shaped by several interrelated socio-political, economic and technical factors. Uncontrolled increases in the identification modalities inherent to digital technology reinforce this dilemma and benefit surveillance practices, thereby complicating the detection of privacy risks and the creation of appropriate safeguards. Easing this problem requires a novel approach to privacy impact assessment (PIA), and this book proposes an alternative PIA framework which, at its core, comprises a basic typology of (personally and technically) identifiable information. This approach contributes to the theoretical and practical understanding of privacy impacts and thus, to the development of more effective protection standards. This book will be of much interest to students and scholars of critical security studies, surveillance studies, computer and information science, science and technology studies, and politics.

Navigating New Media Networks Bree McEwan, 2015-08-13 Navigating New Media Networks examines the changes introduced into society through the increasing use of communication technology. The development of a networked society has allowed individuals to acquire the social resources and support needed to thrive in the modern world, but it has also placed great pressure on the individual to conduct the communication work needed to form and maintain relationships. McEwan explores this issue by delving into topics like identity, privacy, communication competence, online communities, online social support, mediated relational maintenance, and mobile communication. This work will be of interest to scholars of sociology, psychology, and communication.

The Network Society Manuel Castells, 2004 Manuel Castells has drawn together a group of contributors to explore the patterns and dynamics of the network society in its cultural and institutional diversity.

Network Society and Future Scenarios for a Collaborative Economy V. Kostakis, M. Bauwens, 2014-08-22 This book builds on the idea that peer-to-peer infrastructures are gradually becoming the general conditions of work, economy, and society. Using a four-scenario approach, the authors seek to simplify possible outcomes and to explore relevant trajectories of the current techno-economic paradigm within and beyond capitalism.

Key features of network sociality and critical assessment of the notion of a 'networked society' Kathrin Gerbe, 2007-06-09 Essay from the year 2007 in the subject Communications - Mass Media, grade: 1,3, University of Newcastle upon Tyne, course: Media Analysis, language: English, abstract: On an ordinary day, we are woken up by our mobile phone; we get up and check our emails, answer them, call somebody, chat with a total stranger on ICQ, and have a video chat with some friends overseas. Our social relations seem more and more dominated by communication technologies and have assumed a wider dimension as our contacts spread in networks around the globe. Companies, nations and individuals come together, making "[t]he 21st century ... the age of networks" (v. Dijk 2006). This essay discusses the key features of network sociality and the debates around the concept of network society, focussing on the influence of internet use on social interaction particularly in form of virtual communities.
