New Space Frontiers Piers Bizony, 2014-10-15 Take a journey into the New Space Frontier! It is easy to imagine that the space shuttle's retirement has edged the Space Age toward closure, at least in terms of human flight beyond the bounds of earth. In fact, there are more people-carrying ships being constructed now than at any time since Yuri Gagarin became the first man in space half a century ago. Some are already servicing the International Space Station - which, incidentally, has ensured a permanent human presence in space for the last two decades, and is set to continue and expand for decades yet to come. What's more, NASA is no longer the only big player in the space game. Commercial, non-governmental space exploration is becoming a reality rather than just a pipe dream. What orbital adventures await us in the next five decades? Will humans ever again head into deep space, as the Apollo astronauts once did? NASA's new hardware is aimed toward asteroid missions, and ultimately, Mars, but there is a significant chance that a government funded space agency will not be the only - or even the first - organization to send humans across the solar system. Get ready to experience the excitement of adventure with New Space Frontier. Through gorgeous photography and engaging writing, noted space and science author Piers Bizony speculates beyond just today's hardware and explores what might be possible for the next generation.

Single Stage to Orbit Andrew J. Butrica, 2003-10-22 While the glories and tragedies of the space shuttle make headlines and move the nation, the story of the shuttle forms an inseparable part of a lesser-known but no less important drama—the search for a reusable single-stage-to-orbit rocket. Here an award-winning student of space science, Andrew J. Butrica, examines the long and tangled history of this ambitious concept, from its first glimmerings in the 1920s, when technicians dismissed it as unfeasible, to its highly expensive heyday in the midst of the Cold War, when conservative-backed government programs struggled to produce an operational flight vehicle. Butrica finds a blending of far-sighted engineering and heavy-handed politics. To the first and oldest idea—that of the reusable rocket-powered single-stage-to-orbit vehicle—planners who belonged to what President Eisenhower referred to as the military-industrial complex added experimental (X), aircraft-like capabilities and, eventually, a faster, cheaper, smaller managerial approach. *Single Stage to Orbit* traces the interplay of technology, corporate interest, and politics, a combination that well served the conservative space agenda and ultimately triumphed—not in the realization of inexpensive, reliable space transport—but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty-first century. -- D. M. Ashford

Leaving Orbit Margaret Lazarus Dean, 2015-05-19 Winner of the Graywolf Press Nonfiction Prize, a breathtaking elegy to the waning days of human spaceflight as we have known it. In the 1960s, humans took their first steps away from Earth, and for a time our possibilities in space seemed endless. But in a time of austerity and in the wake of high-profile disasters like Challenger, that dream has ended. In early 2011, Margaret Lazarus Dean traveled to Cape Canaveral for NASA's last three space shuttle launches in order to bear witness to the end of an era. With Dean as our guide to Florida's Space Coast and to the history of NASA, *Leaving Orbit* takes the measure of what American spaceflight has achieved while reckoning with its earlier witnesses, such as Norman Mailer, Tom Wolfe, and Oriana Fallaci. Along the way, Dean meets NASA workers, astronauts, and space fans, gathering possible answers to the question: What does it mean that a spacefaring nation won't be going to space anymore?

New Solutions for the Space Debris Problem Joseph N. Pelton, 2015-05-06 Addressing a pressing issue in space policy, Pelton explores the new forms of technology that are being developed to actively remove the defunct space objects from orbit and analyzes their implications in the existing regime of international space law and public international law. This authoritative review covers the due diligence guidelines that nations are using to minimize the generation of new debris, mandates to de-orbit satellites at end of life, and innovative endeavours to remove non-functional satellites, upper stage rockets and other large debris from orbit under new institutional, financial and regulatory guidelines. Commercial space services currently exceed 100 billion USD business per annum, but the alarming proliferation in the population of orbital debris in low, medium and

geosynchronous satellite orbits poses a serious threat to all kinds of space assets and applications. There is a graver concern that the existing space debris will begin to collide in a cascading manner, generating further debris, which is known as the Kessler Syndrome. Scientific analysis has indicated an urgent need to perform space debris remediation through active removal of debris and on-orbit satellite servicing.

We Dream of Gods Devin Madson, 2023-03-21 In this complex tale of war, politics, and lust for power (The Guardian), the fate of the world is decided when heroes and gods march into battle one last time in the searing conclusion of this bold and bloody epic fantasy series. There are no gods. Only men. Betrayed by her closest allies, Empress Miko Ts'ai is thrust from ruler to pawn. But she won't suffer the whims of men. A string of dangerous gambles could win Miko her empire for good, but to take back the throne, she must become everything her ancestors failed to be. Rah e'Torin leads a herd again. Now he seeks to honor a promise he made a lifetime ago—to safely bring his Swords home. Yet Rah's loyalty to the past may be his ultimate undoing. Cassandra Marius is lost. Ensnared by memories that aren't her own, Cass must decide who she really is, but the answer lies beyond one final confrontation with Leo Villius. And trapped in the heart of the Chiltaen army, Dishiva e'Jaroven is handed unexpected power. The dream of a new homeland is within her grasp—if she risks everything and trusts her former enemies. Praise for The Reborn Empire: Imaginative worldbuilding, a pace that builds perfectly to a heart-pounding finale and captivating characters. Something New Under the Sun Helen Gavaghan, 2012-12-06 In this, the first history of artificial satellites and their uses, Helen Gavaghan shows how the idea of putting an object in orbit around the earth changed from science fiction to indispensable technology in the twinkling of an eye. Focusing on three major areas of development - navigational satellites, communications, and weather observation and forecasting - Gavaghan tells the remarkable inside story of how obscure men and women, often laboring under strict secrecy, made satellite technology possible. ...a gripping read. -NEW SCIENTIST

Orbit-Shifting Innovation Rajiv Narang, Devika Devaiah, 2014-01-03 The Dynamics Of Ideas That Create History Orbit-shifting innovation happens when an area that needs transformation meets an innovator with the will and the desire to create, and not follow, history. At the heart of every orbit-shifting innovation is the breakthrough that achieves a transformative impact. Businesses, social enterprises and even governments need orbit-shifting ideas to create a transformative impact. But how does that ground breaking idea come about, and what translates it into actuality? Charting the vast global landscape of orbit-shifting innovation and using unique examples from prominent businesses, the social sector, entrepreneurs and public services - spread across US, UK, Europe, Africa and Asia - the authors build insight into the key drivers behind taking on a transformative challenge and provide a unique framework to navigate the pitfalls and challenges in making it happen. Orbit-shifting innovation empowers everyone to overcome the obstacles to innovation and provides the tools to maximize the impact of transformative change. The inspirational examples and tools for success compel leaders and entrepreneurs to not only pursue impossible challenges but lead the successful journey from conception of an orbit-shifting idea to actually creating history.

Selected Papers of Demetrios G. Magiros S.G. Tzafestas, 2012-12-06 The theory of nonlinear

oscillations and stability of motion is a fundamental part of the study of numerous real world phenomena. These phenomena, particularly auto-oscillations of the first and second kind, capture, parametric, subharmonic and ultraharmonic resonance, asymptotic behavior and orbits' stability, constitute the core of problems treated in Nonlinear Mechanics, and their study is connected with the names of H. Poincare, A. M. Lyapunov, N. M. Krylov and N. N. Bogolyubov. Professor Demetrios Magiros, a widely known scientist in the theories of oscillations and nonlinear differential equations, has devoted his numerous works to this significant part of modern physical science. His scientific results can be classified in the following way: 1) creation of methods of analysis of subharmonic resonances under the nonlinear effect, 2) determination and analysis of the main modes of nonlinear oscillations on the basis of infinite determinants, 3) analysis of problems of celestial mechanics, 4) classification of stability of solutions of dynamic systems concepts, 5) mathematical analogs of physical and social systems. He has developed new methods and solutions for a great number of difficult problems of nonlinear mechanics making a significant contribution to the theory and applications of the field. Urgency, depth of perception of the considered phenomena, and practical directness are characteristics of his work.

Orbit Arthur Vogelsang, 2016-03-31 *Orbit* connects the intimate with what is farthest from us, mixing what we can imagine with what is daily and near. Landscapes stretch from stable and fulfilling domestic interiors to the destiny of our sun as an exploding red giant. That dilemma of human fertility and love facing ultimate destruction is orchestrated by the author's provocative voice and coiled lines, which fondle and handle the reader's heart and mind in a bright light. The book insists on connecting the three eras of human experience – Then, Now, and When – at every turn. *Orbit* continues the unique aesthetic of Vogelsang's first five award-winning books through its "oddly direct original persona," its "mind – prophetic, wild, loony," its "language of surveillance and trembling," and the poems' ability "to find and magnify the emotion suddenly, instantaneously" (comments draw from other poets' reviews.) Vogelsang's new book *Orbit* is a dialogue between daily life and transcendent vision, insisting on the reality of each.

Multi-run Memory Tests for Pattern Sensitive Faults Ireneusz Mrozek, 2018-07-06 This book describes efficient techniques for production testing as well as for periodic maintenance testing (specifically in terms of multi-cell faults) in modern semiconductor memory. The author discusses background selection and address reordering algorithms in multi-run transparent march testing processes. Formal methods for multi-run test generation and many solutions to increase their efficiency are described in detail. All methods presented ideas are verified by both analytical investigations and numerical simulations. Provides the first book related exclusively to the problem of multi-cell fault detection by multi-run tests in memory testing process; Presents practical algorithms for design and implementation of efficient multi-run tests; Demonstrates methods verified by analytical and experimental investigations.

Playing Changes Nate Chinen, 2019-07-23 One of the Best Books of the Year: NPR, GQ, Billboard, JazzTimes In jazz parlance, "playing changes" refers to an improviser's resourceful path through a chord progression. In this definitive guide to the jazz of our time, leading critic Nate Chinen boldly expands on that idea, taking us through the key changes, concepts, events, and people that have shaped jazz since the turn of the century—from Wayne Shorter and Henry Threadgill to Kamasi Washington and Esperanza Spalding; from the phrase "America's classical music" to an explosion of new ideas and approaches; from claims of jazz's demise to the living, breathing scene that exerts influence on mass culture, hip-hop, and R&B. Grounded in authority and brimming with style, packed with essential album lists and listening recommendations, *Playing Changes* takes the measure of this exhilarating moment—and the shimmering possibilities to come.

Orbit Cynthia Zarin, 2017-03-07 With *Orbit*, prize-winning author Cynthia Zarin confirms her place as an indispensable American poet of our time. In this, her fifth collection, Zarin turns her lyric lens on the worlds within worlds we inhabit and how we navigate our shared predicament—the tables of our lives on which the news of the day is strewn: the president speaking to parishioners in Charleston, the ricochet of violence, near and far. Whether writing about hairpin turns in the stair of

childhood, about the cat's claw of anxiety, on the impending loss of a young friend, or how "love endures, give or take," here is the poet who, in the title poem, "bartered forty summers for black pearls" and whose work is full of such wagers, embodied in playing cards, treble notes, snow globes, and balancing acts. Zarin reminds us that the atmosphere created by our experiences shapes and defines the orbit we move through. Along the way, she is both witness and, often indirectly, subject—"I do not know how to hold the beauty and sorrow of my life," she writes. This book is an attempt at an answer.

The Creation of Strange Non-Chaotic Attractors in Non-Smooth Saddle-Node Bifurcations Tobias H. Jäger, 2009-08-07 The author proposes a general mechanism by which strange non-chaotic attractors (SNA) are created during the collision of invariant curves in quasiperiodically forced systems. This mechanism, and its implementation in different models, is first discussed on an heuristic level and by means of simulations. In the considered examples, a stable and an unstable invariant circle undergo a saddle-node bifurcation, but instead of a neutral invariant curve there exists a strange non-chaotic attractor-repeller pair at the bifurcation point. This process is accompanied by a very characteristic behaviour of the invariant curves prior to their collision, which the author calls 'exponential evolution of peaks'.

License to Orbit Joseph N. Pelton, Peter P. Marshall, 2009 This is an up-to-date investigation of the emerging commercial space business. It explores who are the players, the celebrities and technical innovators that are making this important new industry a reality. It is the most comprehensive look at the industry in terms of covering the companies, the role of NASA and other space agencies, as well as the strategic implications of private space systems. It examines the business risks and other possible show-stoppers that might inhibit the growth of commercial spaceflight systems. Space tourism is seen as more than a fad but a crucial next step in the evolution of humankind. The book is unique in terms of exploring new technologies of the future, and reviewing the regulatory and legal ramifications of private space now and into the next decade.
