**The Weaponization of Weather in the Phony Climate War** Joe Bastardi,2020-09-08 What if climate change is naturally occurring and cyclical? What if trillions of dollars will be spent to accomplish nothing? What if the real agenda is not about science, climate and weather, but simply uses this as a tool to disrupt and destroy the foundational concepts of one nation, under God, that have led to the greatest quality of life and liberty the world has ever known? At 65, Joe Bastardi is one of the most experienced meteorologists in the world today. His knowledge of past major events puts into perspective the extreme weather events seen today, that are nothing new, and in fact, not as severe as before. In this book, Bastardi goes in-depth to document naturally occurring climate and weather events to question those whose agenda it is to weaponize each weather event for the pursuit of a political and social aim. Of course, the climate is changing, and with the many natural influencers constantly in play, it always will. Thanks to an ever-fluctuating level of activity in the large natural drivers that have always controlled it, such as our Sun, the oceans, stochastic events and the very design of the system itself, climate change is natural. "A single attribution to man as the climate control knob in the face of this is questionable, if not a stretch. The reader should at least look at the ideas presented here," said Bastardi. Joe understands the fear today, given what has been nothing short of public indoctrination. His new book offers an environmentally friendly and inexpensive solution to alleviate those fears, that will not destroy the economic lifeline of this nation as the Green New Deal surely will. It begins with removing the fear that has been pushed to create what is becoming irrational panic, especially with our young. So, is this book important on multiple levels? You decide.

*Weather Services for the Nation* National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,Committee on the Assessment of the National Weather Service's Modernization Program,2012-11-02 During the 1980s and 1990s, the National Weather Service (NWS) undertook a major program called the Modernization and Associated Restructuring (MAR). The MAR was officially completed in 2000. No comprehensive assessment of the execution of the MAR plan, or comparison of the promised benefits of the MAR to its actual impact, had ever been conducted. Therefore, Congress asked the National Academy of Sciences to conduct an end-to-end assessment. That report, The National Weather Service Modernization and Associated Restructuring: A Retrospective Assessment, concluded that the MAR was a success. Now, twelve years after the official completion of the MAR, the challenges faced by the NWS are no less important than those of the pre-MAR era. The three key challenges are: 1) Keeping Pace with accelerating scientific and technological advancement, 2) Meeting Expanding and Evolving User Needs in an increasingly information centric society, and 3) Partnering with an Increasingly Capable Enterprise that has grown considerably since the time of the MAR. Weather Services for the Nation presents three main recommendations for responding to these challenges. These recommendations will help the NWS address these challenges, making it more agile and effective. This will put it on a path to becoming second to none at integrating advances in science and technology into its operations and at meeting user needs, leading in some areas and keeping pace in others. It will have the highest quality core capabilities among national weather services. It will have a more agile organizational structure and workforce that allow it to directly or indirectly reach more end-users, save more lives, and help more businesses. And it will have leveraged these capabilities through the broader enterprise. This approach will make possible societal benefits beyond what the NWS budget alone allows.

**Extreme Weather and Global Media** Julia Leyda,Diane Negra,2015-06-05 In the two decades bracketing the turn of the millennium, large-scale weather disasters have been inevitably constructed as media events. As such, they challenge the meaning of concepts such as identity and citizenship for both locally affected populations and widespread spectator communities. This timely collection pinpoints the features of an often overlooked yet rapidly expanding category of global media and analyzes both its forms and functions. Specifically, contributors argue that the intense promotion and consumption of 'extreme weather' events takes up the slack for the public conversations society is not having about the environment, and the feeling of powerlessness that accompanies the realization that anthropogenic climate change has now reached a point of no return. Incorporating a range of case studies of extreme weather mediation in India, the UK, Germany, Sweden, the US, and Japan, and exploring recent and ongoing disasters such as Superstorm Sandy, the Fukushima nuclear crisis, flooding in Germany, and heat waves in the UK, Extreme Weather and Global Media generates valuable inquiry into the representational and social characteristics of the new culture of extreme weather.
