The authors provide readers with a solid understanding of the underlying theory and applications. Problem sets and a telegraphic summary at the end of each chapter further assist readers. The historical notes that follow each chapter recap the main points. The second edition features: * Chapters reorganized to improve teaching * 200 new problems * New material on source coding, portfolio theory, and feedback capacity * Updated references Now current and enhanced, the second edition of Elements of Information Theory remains the ideal textbook for upper-level undergraduate and graduate courses in electrical engineering, statistics, and telecommunications.

🔖 **METHODS AND APPLICATIONS OF LINEAR MODELS** Ronald R. Hocking,2013-07-01 Praise for the second edition An essential desktop reference book . . . it should definitely be on your bookshelf. —Technometrics A thoroughly updated book, Methods and Applications of Linear Models: Regression and the Analysis of Variance, third edition features innovative approaches to understanding and working with models and theory of linear regression. The third edition provides readers with the necessary theoretical concepts, which are presented using intuitive ideas rather than complicated proofs, to describe the inference that is appropriate for the methods being discussed. The book presents a unique discussion that combines coverage of mathematical theory of linear models with analysis of variance models, providing readers with a comprehensive understanding of both the theoretical and technical aspects of linear models. With a new focus on fixed effects models, Methods and Applications of Linear Models: Regression and the Analysis of Variance, third edition also features: Newly added topics including least squares, the cell means model, and graphical inspection of data in the AVE method Frequent conceptual and numerical examples for clarifying the statistical analyses and demonstrating potential pitfalls Graphics and computations developed using JMP® software to accompany the concepts and techniques Presented numerous exercises presented to test readers and deepen their understanding of the material An ideal book for courses on linear models and linear regression at the undergraduate and graduate levels, the third edition of Methods and Applications of Linear Models: Regression and the Analysis of Variance is also a valuable reference for applied statisticians and researchers who utilize linear model methodology.

🔖 **COMPUTATIONAL INTELLIGENCE IN TELECOMMUNICATIONS NETWORKS** Witold Pedrycz,Athanasios Vasilakos,2018-10-03 Telecommunications has evolved and grown at an explosive rate in recent years and will undoubtedly continue to do so. As its functions, applications, and technology grow, it becomes increasingly complex and difficult, if not impossible, to meet the demands of a global network using conventional computing technologies. Computational intelligence (CI) is the technology of the future-and the future is now. Computational intelligence in telecommunications networks offers an in-depth look at the rapid progress of CI technology and shows its importance in solving the crucial problems of future telecommunications networks. It covers a broad range of topics, from call admission control, congestion control, and QoS-routing for ATM networks, to network design and management, optical, mobile, and active networks, and intelligent mobile agents. Today’s telecommunications professionals need a working knowledge of CI to exploit its potential to overcome emerging challenges. The CI community must become acquainted with those challenges to take advantage of the enormous opportunities the telecommunications field offers. This text meets both those needs, clearly, concisely, and with a depth certain to inspire further theoretical and practical advances.

🔖 **DATABASE AND EXPERT SYSTEMS APPLICATIONS** Pablo Garcí a Bringas,Abdelkader Hameurlain,Gerald Quirchmayr,2010-08-13 st We welcome you to the proceedings of the 21 International Conference on Database and Expert Systems Applications held in Bilbao. With information and database s- tems being a central topic of computer science, it was to be expected that the integ- tion of knowledge, information and data is today contributing to the again rapidly increasing attractiveness of this field for researchers and practitioners. Since its foundation in 1990, DEXA has been an annual international conference, located in Europe, which showcases state-of-the-art research activities in these areas. DEXA 2010 continued this tradition and provided a forum for presenting and discu- ing research results in the area of database and intelligent systems and advanced - search topics, applications and practically relevant issues related to these areas. It offered attendees the opportunity to extensively discuss requirements, problems, and solutions in the field in the pleasant atmosphere of the city of Bilbao, which is known for its driving industriousness, its top cultural venues and its rich and inspiring he- tage and lifestyle. The University of Deusto with its great educational and research traditions, and the hospitality which the university and the city are so famous for, set the stage for this year’s DEXA conference. This volume contains the papers selected for presentation at the DEXA conference.

🔖 **AI AND FINANCIAL MARKETS** Shigeyuki Hamori,Tetsuya Takiguchi,2020-07-01 Artificial intelligence (AI) is regarded as the science and technology for producing an intelligent machine, particularly, an intelligent computer program. Machine learning is an approach to realizing AI comprising a collection of statistical algorithms, of which deep learning is one such example. Due to the rapid development of computer technology, AI has been actively explored for a variety of academic and practical purposes in the context of financial markets. This book focuses on the broad topic of “AI and Financial Markets”, and includes novel research associated with this topic. The book includes contributions on the application of machine learning, agent-based artificial market simulation, and other related skills to the analysis of various aspects of financial markets.

🔖 **SWISS NATIONAL FOREST INVENTORY – METHODS AND MODELS OF THE FOURTH ASSESSMENT** Christoph Fischer,Berthold Traub,2019-09-24 The Swiss National Forest Inventory (NFI) is a forest survey on national level which started in 1982 and has already reached its 5th survey cycle (NFI5). It can be characterized as a multisource and multipurpose inventory where information is mainly collected from terrestrial field surveys using permanent sample plots. In addition, data from aerial photography, GIS and forest service questionnaires are also included. The NFI’s main objective is to provide statistically reliable and sound figures to stakeholders such as politicians, researchers, ecologists, forest service, timber industry, national and international organizations as well as to international projects such as the Forest Resources Assessment of the United Nations. For Switzerland, NFI results are typically reported on national and regional level. State of the art methods are applied in all fields of data collection which have been proven to be of international interest and have even served as a basis for other European NFIs. The presented methods are applicable to any sample based forest inventory around the globe. In 2001 the Swiss NFI published its methods for the first time. Since then, many methodological changes and improvements have been introduced. This book describes the complete set of methods and revisions since NFI2. It covers various topics ranging from inventory design and statistics to remote sensing, field survey methods and modelling. It also describes data quality concepts and the software framework used for data storage, statistical analysis and result presentation.

🔖 **NUMERICAL POLYNOMIAL ALGEBRA** Hans J. Stetter,2004-01-01 In many important areas of scientific computing, polynomials in one or more variables are employed in the mathematical modeling of real-life phenomena; yet most of classical computer algebra assumes exact rational data. This book is the first comprehensive treatment of the emerging area of numerical polynomial algebra, an area that falls between classical numerical analysis and classical computer algebra but, surprisingly, has received little attention so far. The author introduces a conceptual framework that permits the meaningful solution of various algebraic problems with multivariate polynomial equations whose coefficients have some indeterminacy; for this purpose, he combines approaches of both numerical linear algebra and commutative algebra. For the application scientist, numerical polynomial algebra provides both a survey of polynomial problems in scientific computing that may be solved numerically and a guide to their numerical treatment. In addition, the book provides both introductory sections and novel extensions of numerical analysis and computer algebra, making it accessible to the reader with expertise in either one of these areas.

🔖 **STRUGGLE FOR POWER THE LONGEST SCHOOL STRIKE** Leon Bock Kavunedus,Leon Bock,2011 Two people participating in the same events, yet on opposite sides, give an engrossing view of a struggle which engulfed a large community in northern Westchester County in New York State. It became the longest teachers strike in New York State’s history. Even though they are personal memoirs, both authors try to give as full a picture of the personalities, institutions, and issues driving the struggle as each experienced it. The narrative is in two parts, side by side, and event by event. Both are impressionistic accounts that do not claim to be objective. Dr. Leon Bock’s account is the viewpoint of a leader of a major institution, the Lakeland School District. In representing the district he had the heavy responsibility to merge the interests of students and parents, faculty, the taxpaying community, and the Board of Education. Mr. Thomas Kavunedus, a faculty member, served as a negotiator for the Lakeland Federation of Teachers. He saw his responsibilities as extending to the promotion of learning and teaching environment which would foster excellence. The contract with the school district, which Mr. Kavunedus had participated in promulgating years earlier, was a major step in raising teachers out of the dark ages of coffee in the boiler room, and hopefully greater professionalism. Both authors disagree with one another on many of the issues. Most of these issues bedevil our schools today. Yet, there is enough civility to recognize that partisanship need not be so all engulfing that it demonizes the other side and its objectives. No narrative of such a complex event can be totally accurate and objective. The authors try to focus on the interpersonal relationships, rather than serve as a textbook history of this series of complex events. There is no intention to discredit, or malign any of the personalities in the narrative; rather they are presented as the writers experienced them under conditions of stress.
