Oil Spills First Principles B. Ornitz†, M. Champ, 2002-06-18 Marine oil spills are no longer considered unavoidable accidents resulting from adverse environmental conditions or functions of catastrophic events. More than 80% of all spills are the result of human error. The focus of the current legal, regulatory, and convention framework affecting the transportation of oil by ship reflects a recent change in public attitude, in which there is an insistence upon protection of the world's marine environments, particularly coastal ecosystems. The outcome of such global attention is the creation of significant legal and political motivators for a cultural shift by the oil

shipping industry, from an evasion culture to a safety culture. The new safety culture connotes continuous improvement in ship operations and a willingness to adopt the evolving concepts of communication at all levels, better trained and qualified personnel on board ship, emphasis of safety from top down, and proactive institution of safety management systems. Mere compliance with international and national laws is no longer sufficient for future sustainable shipping. These changes and advancements in understanding the science and engineering of oil spills are the focus of this book on Oil Spills First Principles. They are Prevention, based upon adoption of the safety culture, and Best Response, utilizing scientific, technical and environmental data and information. Over the past 30 years, billions of US dollars have been spent in R&D planning, response and clean up of oil spills. All of these efforts have focused on achieving Best Response. The concept of time periods of Technology Windows-of-Opportunity for a given response and clean up technology has developed from the leadership and wisdom of researchers and responders from many nations using modeling of the weathering of spilled oil and technology effectiveness. The Windows-of-Opportunity strategy provides a scientific basis for policy and decision-making in oil spill planning, response, and training. A global paradigm shift is needed to more effectively utilize and expedite the application of lessons learned in both prevention and clean up. Recognition of economic, political, and legal benefits accruing from environmental protection is good for business and

critical for sustainable shipping.

The Market for Seamen in the Age of Sail International Maritime Economic History Association, 1994 This volume collects eight essays that all attempt to answer two key concerns: did markets for seafarers exist in the age of sail; and, if so, were these markets efficient? The question was initially approached by Charles Kindleberger, who claims a market is efficient if it permits free access for employer and employee, if supply and demand match balance so that wages increase, and that labour must command the same price across the market. The first four focus on the broadly defined early-modern period, and all agree on the existence of the markets but are divided over whether or not they are efficient. The second section asks the same questions of the nineteenth century, and receives similar answers. All of the essays take issue with the definition and application of the term 'efficiency' when approaching their conclusions. Each author is considered an expert within their field, and all base their research on the North Atlantic. Section 1: These essays focus on the early-modern period of maritime history. Carla Rahn Phillips considers the market for maritime labour in early-modern Spain, finding that despite the necessity of sailors and existence of the market, wages remained low and skilled maritime labourers did not have bargaining power, rendering the system inefficient. Vince Walsh examines Salem, Massachusetts, and finds that the market within Salem was efficient yet would only recruit within Salem and suffered as a result. Paul van Royen focusses

on seventeenth and eighteenth century Netherlands, and finds the organisations functioned well but enable huge discrepancies in wages. David Starkey chose eighteenth century England, noting a fluctuation between efficiency and inefficiency across markets. All authors find their work linked by the prevalence of these markets and their own difficulties in determining 'efficiency' within these economies. Section 2: These essays focus on the maritime history of the nineteenth century. David Williams discusses the emergence on the advance note and the tremendous influence it had on market behaviour, indicating inefficient markets. Yrjo Kaukiainen considers Finland's history of interconnected local maritime labour markets, but also struggles to quantify their 'efficiency' after also taking issue with the ambiguous phrase. Lewis R. Fischer addresses the imbalance of wages in Norwegian maritime markets and finds that despite the integration from local to regional markets, the system remained inefficient. Finally, Morten Hahn-Pedersen and Poul Holm consider the fishing and shipping markets in Denmark and believe the wage inconsistencies reflect an inefficient system.
