Sketching User Experiences: Getting the Design Right and the Right Design Bill Buxton,2010-07-28 Sketching User Experiences approaches design and design thinking as something distinct that needs to be better understood—by both designers and the people with whom they need to work— in order to achieve success with new products and systems. So while the focus is on design, the approach is holistic. Hence, the book speaks to designers, usability specialists, the HCI community, product managers, and business executives. There is an emphasis on balancing the back-end concern with usability and engineering excellence (getting the design right) with an up-front investment in sketching and ideation (getting the right design). Overall, the objective is to build the notion of informed design: molding emerging technology into a form that serves our society and reflects its values. Grounded in both practice and scientific research, Bill Buxton's engaging work aims to spark the imagination while encouraging the use of new techniques, breathing new life into user experience design. Covers sketching and early prototyping design methods suitable for dynamic product capabilities: cell phones that communicate with each other and other embedded systems, smart appliances, and things you only imagine in your dreams Thorough coverage of the design sketching method which helps easily build experience prototypes—without the effort of engineering prototypes which are difficult to

Travel Writing for Tourism and City Branding Charlie Mansfield,Jasna Potočnik Topler,2022-12-30 Travel Writing for Tourism and City Branding is an insightful, expert-led book which provides tourism students with a practice-based approach to producing researched literary travel writing on an urban destination, using the writing process as a research tool in itself. The book is scientifically supported with full academic references for researchers. On a global basis, city councils and destination managers are seeking new ways to commission and sponsor professional content authors as part of place-branding projects for tourism development. Given the increasing prevalence of such content within the tourism industry, this book provides a cohesive overview of literary travel writing, presenting it as an enquiry process that can be applied by writer-researchers to spaces that have value to them. Travel writing is presented as a methodological practice that researchers can learn and apply to their own projects, both in academic settings and in commercial city branding. Examples of literary travel writing are carefully examined throughout and their affects refracted through further work. Enriched with a wealth of case studies, chapters are presented in such a way that readers can take the work as a model for their own projects. This informative and practical volume will be of great interest to students of tourism marketing, destination marketing, place branding and travel writing, as well as current creators of commercial tourism marketing content.

On Line and On Paper Kathryn Henderson,1998-12-01 The role of representation in the production of technoscientific knowledge has become a subject of great interest in recent years. In this book, sociologist and art critic Kathryn Henderson offers a new perspective on this topic by exploring the impact of computer graphic systems on the visual culture of engineering design. Henderson shows how designers use drawings both to organize work and knowledge and to recruit and organize resources, political support, and power. Henderson's analysis of the collective nature of knowledge in technical design work is based on her participant observation of practices in two industrial settings. In one she follows the evolution of a turbine engine package from design to production, and in the other she examines the development of an innovative surgical tool. In both cases she describes the messy realities of design practice, including the mixed use of the worlds of paper and computer graphics. One of the goals of the book is to lay a practice-informed groundwork for the creation of more usable computer tools. Henderson also explores the relationship between the historical development of engineering as a profession and the standardization of engineering knowledge, and then addresses the question: Just what is high technology, and how does its affect the extent to which people will allow their working habits to be disrupted and restructured? Finally, to help explain why visual representations are so powerful, Henderson develops the concept of metaindexicality—the ability of a visual representation, used interactively, to combine many diverse levels of knowledge and thus to serve as a meeting ground (and sometimes battleground) for many types of workers.

Teaching for Student Learning Dick Arends,Ann Kilcher,2010-02-25 Teaching for Student Learning: Becoming an Accomplished Teacher shows teachers how to move from novice to expert status by integrating both research and the wisdom of practice into their teaching. It emphasizes how accomplished teachers gradually acquire and apply a broad repertoire of evidence-based teaching practices in the support of student learning. The book's content stems from three major fields of study: 1) theories and research on how people learn, including new insights from the cognitive and neurosciences; 2) research on classroom practices shown to have the greatest effect on student learning; and 3) research on effective schooling, defined as school-level factors that enhance student achievement and success. Although the book's major focus is on teaching, it devotes considerable space to describing how students learn and how the most effective and widely-used models of teaching connect to principles of student learning. Specifically, it describes how research on teaching, cognition, and neuroscience converge to provide an evidence-based science of learning which teachers can use to advance their practice. Key features include the following: Evidence-Based Practice – This theme is developed through: 1) an ongoing review and synthesis of research on teaching and learning and the resulting guidelines for practice and 2) boxed research summaries within the chapters. Instructional Repertoire Theme – Throughout the book teaching is viewed as an extremely complex activity that requires a repertoire of instructional strategies that, once mastered, can be drawn upon to fit specific classrooms and teaching situations. Standards-based School Environments – Education today is dominated by standards-based school environments. Unlike competing books, this one describes these environments and shows how they impact curriculum design and learning activities. The

objective is to show how teachers can make standards-based education work for them. Pedagogical Features — In addition to an end-of-book glossary, each chapter contains research boxes, reflection boxes, itemized end-of-chapter summaries, and end-of-chapter learning activities. Website — An accompanying website contains a variety of field-oriented and site-based activities that teachers can do alone or with colleagues.

Demonstratives John Cleaves,2016-06-25 What is it about PowerPoint that inspires such loathing in people? In a word: bullets. For many users and their bored-stiff audiences, bulleted lists are the be-all and end-all of a PowerPoint presentation. But according to legal technologist and author John Cleaves, if making a slideshow of bulleted lists is all you ever do with PowerPoint, then you're missing out on the software's incredible capacity to create dramatic courtroom demonstratives that not only illustrate your point, but create memorable images and animations that will stay in the minds of jurors in the deliberation room and beyond. In Demonstratives: Making Effective Graphics for Trial, you will learn, step by step, how to: • Develop a consistent theme (or brand) throughout your demonstratives so they have their own look and feel that jurors can readily identify as your side of the case • Create a variety of timelines that tell and sell your client's story in the order it happened • Make your important quotes, callouts, and tear outs look like they were created by a professional graphic artist • Transform your data into graphs and charts that explain or analyze information in a clear way • Insert photographs, videos, and animated GIFs into your slideshow to demonstrate who, what, where, and even how • Add motion to the objects you create to bring to life traffic patterns, patent figures, equipment machination, and much more • Design three-dimensional physical models, still lifes, and text that highlight volume, size, and spatial relationships among objects The eBook closes with everything you need to know to share your demonstratives in the courtroom: from the Federal Rules of Evidence you must consider to a checklist of audio-visual equipment to bring and tasks to complete once you are finally in the courtroom.
