WPA Posters in an Aesthetic, Social, and Political Context Cory Pillen,2020-03-09 This book examines posters produced by the Works Progress Administration (WPA), a federal relief program designed to create jobs in the United States during the Great Depression. Cory Pillen focuses on several issues addressed repeatedly in the roughly 2,200 extant WPA posters created between 1935 and 1943: recreation and leisure, conservation, health and disease, and public housing. As the book shows, the posters promote specific forms of knowledge and literacy as solutions to contemporary social concerns. The varied issues these works engage and the ideals they endorse, however, would have resonated in complex ways with the posters' diverse viewing public, working both for and against the rhetoric of consensus employed by New Deal agencies in defining and managing the relationship between self and society in modern America. This book will be of interest to scholars in design history, art history, and American studies.

Private and Confidential? Chris L. Clark,Clark, Chris,McGhee, Janice,2008-07-02 Handling personal and often sensitive information is central to daily practice in social and health services. However, the increasing emphasis on multi-disciplinary and inter-agency working required for effective, joined-up services presents new challenges and dilemmas in preserving citizens' rights to privacy. This book examines key philosophical, ethical and legal issues in the area of privacy and confidentiality and explores their implications for policy and practice. ,Offering a range of analytical frameworks the book focuses on different practice areas, including health and social care, children's services and criminal justice. The contributors from disciplines including law, philosophy, anthropology and the personal service professions bring their direct personal experience of working to create new systems and practices in a turbulent policy environment. The book provides a synoptic multi-disciplinary view of this

increasingly challenging area where technological development, civil liberties, surveillance, health and welfare become inexorably intertwined. The book will be of key interest to professionals, managers, policy makers and academics in the health and personal social services. Students of social work, probation, medicine, nursing and professions allied to medicine will find a common multidisciplinary framework for their respective professional concerns to protect the interests and promote the wellbeing of clients, their families and the wider community.

Literary Writings in America, 1977

Common Enemies Rachel Kahn Best, 2019 For over a hundred years, millions of Americans have joined together to fight a common enemy by campaigning against diseases. In *Common Enemies*, Rachel Kahn Best asks why disease campaigns have dominated a century of American philanthropy and health policy and how the fixation on diseases shapes efforts to improve lives. Combining quantitative and qualitative analyses in an unprecedented history of disease politics, Best shows that to achieve consensus, disease campaigns tend to neglect stigmatized diseases and avoid controversial goals. But despite their limitations, disease campaigns do not crowd out efforts to solve other problems. Instead, they teach Americans to give and volunteer and build up public health infrastructure, bringing us together to solve problems and improve our lives.

Geometric Harmonic Analysis III Dorina Mitrea, Irina Mitrea, Marius Mitrea, 2023-05-12 This monograph presents a comprehensive, self-contained, and novel approach to the Divergence Theorem through five progressive volumes. Its ultimate aim is to develop tools in Real and Harmonic Analysis, of geometric measure theoretic flavor, capable of treating a broad spectrum of boundary value problems formulated in rather general geometric and analytic settings. The text is intended for researchers, graduate students, and industry professionals interested in applications of harmonic analysis and geometric measure theory to complex analysis, scattering, and partial differential equations. Volume III is concerned with integral representation formulas for nullsolutions of elliptic PDEs, Calderón-Zygmund theory for singular integral operators, Fatou type theorems for systems of elliptic PDEs, and applications to acoustic and electromagnetic scattering. Overall, this amounts to a powerful and nuanced theory developed on uniformly rectifiable sets, which builds on the work of many predecessors.

Radical Prescription Kelly Urban, 2023-03-16 Extinguishing a public health threat is difficult under any condition, let alone during a sweeping national revolution. In this first comprehensive study of tuberculosis in modern Cuba, Kelly Urban analyzes the medical, social, and governmental responses to the highly contagious disease as the island was heading into and emerging from the Revolution of 1959, providing a window onto broad questions of citizens' rights, biomedicine and public health, and political change. Drawing on a diverse range of sources revealing the perspectives of those at the center of power and those on the margins, Urban finds that the Cuban republican state intervened to confront the tuberculosis problem only after coming under intense grassroots pressure. Cuban citizens forged an activist political subculture around tuberculosis, rejecting discourses that blamed the sick for their own illness. This loose coalition of sanatorium patients, tenement dwellers, black public intellectuals, labor organizers, and reform-minded physicians won entitlements to state health care and pressed for other social rights that influenced health. Their critiques of the state's politicized and inefficient tuberculosis program contributed to the declining legitimacy of the Batista government, helping to spur the Revolution and an innovative restructuring of the public health system.

Shukla,Naveen Kumar Vishvakarma,2021-06-10 Colorectal cancer (CRC) is a major global health challenge as the third leading cause for cancer related mortalities worldwide. Despite advances in therapeutic strategies, the five-year survival rate for CRC patients has remained the same over time due to the fact that patients are often diagnosed in advanced metastatic stages. Drug resistance is another common reason for poor prognosis. Researchers are now developing advanced therapeutic strategies such as immunotherapy, targeted therapy, and combination nanotechnology for drug delivery. In addition, the identification of new biomarkers will potentiate early stage diagnosis. This book is the first of three volumes on recent developments in colorectal diagnosis and therapy. Each volume can be read on its own, or together. Each volume focuses on different novel therapeutic advances, biomarkers, and identifies therapeutic targets for treatment. Written by leading international experts in the field, coverage also addresses the role of diet habits and lifestyle in reducing gastrointestinal disorders and incidence of CRC. Chapters discuss current and future diagnostic and therapeutic options for colorectal cancer patients, focusing on immunotherapeutic, nanomedicine, biomarkers, and dietary factors for the effective management of colon cancer.
