Card-Carrying Christians Rebecca C. Bartel,2021-05-24 In the waning years of Latin America's longest and bloodiest civil war, the rise of an unlikely duo is transforming Colombia: Christianity and access to credit. In her exciting new book, Rebecca C. Bartel details how surging evangelical conversions and widespread access to credit cards, microfinance programs, and mortgages are changing how millions of Colombians envision a more prosperous future. Yet programs of financialization propel new modes of violence. As prosperity becomes conflated with peace, and debt with devotion, survival only becomes possible through credit and its accompanying forms of indebtedness. A new future is on the horizon, but it will come at a price.

Transition Point: From Steam to the Singularity Sean A. Culey,2018-11-06 We live in disruptive times. The world is changing faster than ever before, leaving people dazed, businesses struggling, economies floundering and societies fracturing. But why? Transition Point is the result of over five years of research to establish the answer; a breathtaking tale of freedom, unintended consequences and disruptive technologies that starts 1000 years ago and ends up in the second half of the 21st Century. Starting with an examination into the drivers of technological change and the social, economic and political factors that both enable or suppress it, Transition Point explains why industrialisation happened where and when it did, why progress comes in waves, and why the technologies in the current wave, such as robotics, blockchain and AI, are likely to be the most disruptive of all. It then addresses the million-dollar question: what's next? What impact will this wave have on our businesses, our economies and most importantly, on our society? Culey explores how our current trajectory could result in a new golden age, but also how it is just as likely to result in a digital dictatorship of compliance and constant surveillance. Finally, he explains why we may soon see Homo sapiens' role as the dominant species come to an end. As Klaus Schwab, founder of the World Economic Forum, stated; We stand on the brink of a technological revolution that will fundamentally alter the way we live, work, and relate to one another. In its scale, scope, and complexity, the transformation will be unlike anything humankind has experienced before. Transition Point explains why this is happening, what it means, and why the decisions we make now will prove to be critical.

Interface Science and Composites Soo-Jin Park,Min-Kang Seo,2011-07-18 The goal of Interface Science and Composites is to facilitate the manufacture of technological materials with optimized properties on the basis of a comprehensive understanding of the molecular structure of interfaces and their resulting influence on composite materials processes. From the early development of composites of various natures, the optimization of the interface has been of major importance. While there are many reference books available on composites, few deal specifically with the science and mechanics of the interface of materials and composites. Further, many recent advances in composite interfaces are scattered across the literature and are here assembled in a readily accessible form, bringing together recent developments in the field, both from the materials science and mechanics perspective, in a single convenient volume. The central theme of the book is tailoring the interface science of composites to optimize the basic physical principles rather than on the use of materials and the mechanical performance and structural integrity of composites with enhanced strength/stiffness and fracture toughness (or specific fracture resistance). It also deals mainly with interfaces in advanced composites made from high-performance fibers, such as glass, carbon, aramid, and some inorganic fibers, and matrix materials encompassing polymers, carbon, metals/alloys, and ceramics. Includes chapter on the development of a nanolevel dispersion of graphene particles in a polymer matrix Focus on tailoring the interface science of composites to optimize the basic physical principles Covers mainly interfaces in advanced composites made from high performance fibers
