Nuclear War Survival Skills Cresson H. Kearny, 2016-01-19 A field-tested guide to surviving a nuclear attack, written by a revered civil defense expert. This edition of Cresson H. Kearny's iconic Nuclear War Survival Skills (originally published in 1979), updated by Kearny himself in 1987 and again in 2001, offers expert advice for ensuring your family's safety should the worst come to pass. Chock-full of practical instructions and preventative measures, Nuclear War Survival Skills is based on years of meticulous scientific research conducted by Oak Ridge National Laboratory. Featuring a new introduction by ex-Navy SEAL Don Mann, this book also includes: instructions for six different fallout shelters, myths and facts about the dangers of nuclear weapons, tips for maintaining an adequate food and water supply, a foreword by "the father of the hydrogen bomb," physicist Dr. Edward Teller, and an "About the Author" note by Eugene P. Wigner, physicist and Nobel Laureate. Written at a time when global tensions were at their peak, Nuclear War Survival Skills remains relevant in the dangerous age in which we now live.

The Medical Implications of Nuclear War Fred Solomon, Robert Q. Marston, Lewis Thomas, Steering Committee for the Symposium on the Medical Implications of Nuclear War, Institute of Medicine, 1986-01-15 Written by world-renowned scientists, this volume portrays the possible direct and indirect devastation of human health from a nuclear attack. The most comprehensive work yet produced on this subject, The Medical Implications of Nuclear War includes an overview of the potential environmental and physical effects of nuclear bombardment, describes the problems of choosing who among the injured would get the scarce medical care available, addresses the nuclear arms race from a psychosocial perspective, and reviews the medical needs--in contrast to the medical resources likely to be available--after a nuclear attack. It should serve as the definitive statement on the consequences of nuclear war.--Arms Control Today

Survive the Bomb Eric G. Swedin, 2011-06-01 An examination of the American government's Cold War national defense measures and public communications regarding protection from nuclear disaster. The launch of Russia's Sputnik satellite in 1957 began an era where American citizens were haunted by fears of annihilation. Baby Boomers will remember Bert the Turtle, who instructed them how to "duck and cover." Survive the Bomb documents other U.S. government efforts to calm the collective psyche with nuclear survival handouts. These cheerful and naïve representations unintentionally inspired countless schoolchildren to question authority at an early age. This strange era reached its peak in 1962 with the Cuban Missile Crisis, lasting at least until the fall of the Berlin Wall. The nightmare still lingers today with the terrorist threat of dirty bombs and efforts by countries like Iran and North Korea to build their own nuclear arsenals. In addition to Civil Defense brochures and pamphlets from the period, Survive the Bomb includes: · Aftermath descriptions and casualty estimates at various distances from a nuclear blast · Civil Defense reports and recommendations to the United States Congress and President · Declassified nuclear wargame scenarios where the Department of Defense imagined the unimaginable · An introduction and commentaries by Cold War historian Eric G. Swedin

Clearly written and richly illustrated, it serves as an essential information resource for those learning to survive the effects of nuclear weapons. Nuclear War Survival Skills Cresson H. Kearny, 1979 Researchers who have spent much time and effort learning the facts about effects of nuclear weapons now know that all-out nuclear war would not be the end of mankind or of civilization. Even if our country remained unprepared and were to be subjected to an all-out nuclear attack, many millions of Americans would survive and be in favorable conditions to live through difficult post-attack years. This book is written for the majority of Americans who, in a crisis threatening nuclear war, would want to improve their chances of surviving. It brings together field-tested instructions that have enabled untrained Americans to make expedient fallout shelters air pumps to ventilate and cool shelters, fallout meters, and other expedient life-support equipment. (Expedient, as used in civil defense work, describes equipment that can be made by untrained citizens in 48 hours or less, while guided solely by field-tested, written instructions and using only widely available materials and tools.) Successive versions of these instructions have been used repeatedly and successfully by families working under simulated crisis conditions. These instructions have been improved

repeatedly by Oak Ridge National Laboratory civil defense researchers over a period of eight years and are the heart of this book.

Assessing Medical Preparedness to Respond to a Terrorist Nuclear Event Institute of Medicine, Board on Health Sciences Policy, Committee on Medical Preparedness for a Terrorist Nuclear Event, 2009-08-19 A nuclear attack on a large U.S. city by terrorists—even with a low-yield improvised nuclear device (IND) of 10 kilotons or less—would cause a large number of deaths and severe injuries. The large number of injured from the detonation and radioactive fallout that would follow would be overwhelming for local emergency response and health care systems to rescue and treat, even assuming that these systems and their personnel were not themselves incapacitated by the event. The United States has been struggling for some time to address and plan for the threat of nuclear terrorism and other weapons of mass destruction that terrorists might obtain and use. The Department of Homeland Security recently contracted with the Institute of Medicine to hold a workshop, summarized in this volume, to assess medical preparedness for a nuclear detonation of up to 10 kilotons. This book provides a candid and sobering look at our current state of preparedness for an IND, and identifies several key areas in which we might begin to focus our national efforts in a way that will improve the overall level of preparedness.
