Hovercraft Technology, Economics and Applications J.R. Amyot,2013-10-22 The amphibious versatility, marine speed and low footprint pressure have given the hovercraft a role in specialized applications. Among them are search and rescue, emergency medical services, military and arctic operations, icebreaking, patrol, law enforcement, ferries, and recreational activities such as racing. To meet these demands, the hovercraft has undergone considerable development since its inception. A comprehensive and timely review of the analysis, design, operation, economics and applications of hovercraft is presented in this volume by a team of highly qualified experts. The topics covered range from first principles to the state-of-the-art, with extensive references to current literature. The overall presentation is intended not to exceed the final year level of undergraduate engineering. The introduction and summary sections of all chapters are intended to give a qualitative grasp of the material covered without having to read all the technical portions. In varying degrees, the volume will appeal to managers, decision-support staff, operators, technologists, undergraduate students, and anyone entering the hovercraft field or seeking an introduction to it. It will also be of interest to design engineers, researchers and graduate students. Thus, this volume can serve as an up-to-date reference on several important aspects of hovercraft for a wide range of readers.

Another Century Barton Paul Levenson,2021-12-09 Another Century By: Barton Paul Levenson The powerful nation-state of Vinland dominates North America. Founded by Vikings in the 900s, conquered by Britain in the 1700s, it is now a “Crown Dominion,” with its own king and queen. Vinland represses the native “Skrellings”: they are servants and workers, and suffer many legal restrictions. Young Thorvald Winchester programs the enormous Lundqvist and Chesterfield Analytical Engine, and courts his old history professor’s daughter, Jenny Nilsson. Unknown to Jenny, Thorvald has been an atheist since he was thirteen, when a train wreck killed his parents and Jenny’s mother. Atheist, science-minded Thorvald and pious Jenny seem polar opposites, but both are creatures of their time and place, used to gas lamps, horse carriages, and a highly formal culture. To Thorvald, life seems grand. But his world is poised on the brink. France and the Scientific Socialist Republic of Prussia defeated the eastern European dictatorship of Puustinia in the 1870s, and demanded huge reparations. Puustinia, rearming, now wants revenge. And Puustinia’s dictator, Ion Seidlitz, may have the key to heavier-than-air flight—which could give him power to conquer the world. The Vinland government recruits Thorvald to program simulations of “aeromobiles,” hoping they can be built in time to beat Puustinia. And soon, a test flight to Europe drops him in the middle of the action. This fascinating novel explores the shock of a Victorian culture facing modern-style totalitarianism. Love, freedom, and the fate of the world are all at stake as the calendar goes from 1900 to 1901, and we enter Another Century.

Drones as Cyber-Physical Systems Jung-Sup Um,2019-01-31 This book introduces the concept of using drones as a teaching tool to explore the fundamental principles, technology and applications of Cyber-Physical Systems (CPS). A short introduction sets CPS in the context of the 4th industrial revolution, and describes various CPS technologies including self-driving cars, commercial intelligent drones and mobile robots, in which artificial intelligence routinely supports smarter decision-making. The core of the book then focuses on commercially available drones, the only available system offering the advantage of cyber-physical bridging through 3D autonomous dynamic flying in classroom conditions. Chapters describe drone technology, including location sensors and imaging systems. CPS theory is explained through typical drone flying procedures and do-it-yourself (DIY) aerial photography in which communication between sensors, actuators and controllers occurs through cyber-physical bi-directional bridging. This book opens new possibilities in fostering 4th industrial revolution literacy, introducing relevant examples from readily available equipment, making core elements of cyber-physical bridging accessible. It is aimed primarily at those students who have an interest in CPS, drones and those from disciplines that are concerned with spatial information.
