*Aristotle's Animals in the Middle Ages and Renaissance* Carlos G. Steel, Guy Guldentops, Pieter Beullens, 1999 Aristotle's zoological writings with their wealth of detailed investigations on diverse species of animals have fascinated medieval and Renaissance culture. This volume explores how these texts have been read in various traditions (Arabic, Hebrew, Latin), and how they have been incorporated in different genres (in philosophical and scientific treatises, in florilegia and encyclopedias, in theological symbolism, in moral allegories, and in manuscript illustrations). This multidisciplinary and multilingual approach highlights substantial aspects of Aristotle's animals.

*Social Media, Parties, and Political Inequalities* Kristof Jacobs, Niels Spierings, 2016-01-05 This book examines how social media have transformed politics in established democracies. Specifically, the authors examine the influence of the unique qualities of social media on the power balance between and within parties. They present a general theory as well as an in-depth case study of the Netherlands and compare it to the US and European democracies. The authors show how and why social media's introduction leads to equalization for some and normalization for others. Additional to national politics, Jacobs and Spierings investigate often-overlooked topics such as local and European politics and the impact on women and ethnic minorities.

**A Multidisciplinary Approach to Capability in Age and Ageing** Hanna Falk Erhag, Ulrika Lagerlöf Nilsson, Therese Rydberg Sterner, Ingmar Skoog, 2022-01-10 This open access book provides insight on how to interpret capability in ageing – one's individual ability to perform actions in order to reach goals one has reason to value – from a multidisciplinary approach. With for the first time in history there being more people in the world aged 60 years and over than there are children below the age of 5, the book describes this demographic trends as well as the large global challenges and important societal implications this will have such as a worldwide increase in the number of persons affected with dementia, and in the ratio of retired persons to those still in the labor market. Through contributions from many different research areas, it discussed how capability depends on interactions between the individual (e.g. health, genetics, personality, intellectual capacity), environment (e.g. family, friends, home, work place), and society (e.g. political decisions, ageism, historical period). The final chapter summarizes the differences and similarities in these contributions. As such this book provides an interesting read for students, teachers and researchers at different levels and from different fields interested in capability and multidisciplinary research.

**Growth, Structural Transformation, and Rural Change in Viet Nam** Finn Tarp, 2017 Many developing countries-Viet Nam included-continue to struggle to raise incomes per capita. A common feature of the growth and development process is a fundamental change in the pattern of economic activity, as households reallocate labour from traditional agriculture to more productive forms of agriculture and modern industrial and service sectors. Broad structural transformation and widespread poverty reduction is the combined result of these large-scale shifts in work and labour allocation when they realise desired development goals. The roots of this volume grow from when the first pilot Viet Nam Access to Resources Household Survey (VARHS) was carried out in 2002. The success of this inspired the Central Institute of Economic Management (CIEM) in Hanoi, the Institute of Policy and Strategy for Agriculture and Rural Development (CAP-IPSARD), the Institute of Labour Science and Social Affairs (ILSSA), and the Development Economics Research Group (DERG) of the University of Copenhagen, together with Danida and later on UNU-WIDER, to plan and carry out a more ambitious VARHS from 2006, increasing coverage and representativeness to more than 2,150 families and 12 provinces across the various regions of Viet Nam. The VARHS covering these very same households had by 2014 been carried out five times, i.e. every two years. It is on this high quality panel data foundation and almost 15 years of study and policy work using the VARHS data the present volume builds, in its effort to bring out the essential rural micro-economic characteristics and insights of a dynamic South-East Asian economy in transition from a centrally planned towards a more market based economy.

*Contemporary Perspectives on Ageism* Liat Ayalon, Clemens Tesch-Römer, 2018-05-22 This open access book provides a comprehensive perspective on the concept of ageism, its origins, the manifestation and consequences of ageism, as well as ways to respond to and research ageism. The book represents a collaborative effort of researchers from over 20 countries and a variety of disciplines, including, psychology, sociology, gerontology, geriatrics, pharmacology, law, geography, design, engineering, policy and media studies. The contributors have collaborated to produce a truly stimulating and educating book on ageism which brings a clear overview of the state of the art in the field. The book serves as a catalyst to generate research, policy and public interest in the field of ageism and to reconstruct the image of old age and will be of interest to researchers and students in gerontology and geriatrics.

**Education on the Dalton Plan** Helen Parkhurst, 1922

**Chemometrics** B.R. Kowalski, 2013-04-17 At a time when computerized laboratory automation is producing a data explosion, chemists are turning to applied mathematics and statistics for the tools to extract useful chemical information from data. This rush to find applicable methods has led to a somewhat confusing body of literature that represents a barrier to chemists wishing to learn more about chemometrics. The confusion results partly from the mixing of chemical notation and nomenclature with those of statistics, applied mathematics and engineering. Additionally, in the absence of collaboration with mathematicians, chemists have, at times, misused data analysis methodology and even reinvented methods that have seen years of service in other fields. The Chemometrics Society has worked hard to solve this problem since it was founded in 1974 with the goal of improving communications between the chemical sciences and applied mathematics and statistics. The NATO Advanced Study Institute on Chemometrics is evidence of this fact as it was initiated in response to a call from its membership for advanced training in several areas of chemometrics. This Institute focused on current theory and application in the new field of Chemometrics: Use of mathematical and statistical methods, Ca) to design or select optimal measurement procedures and experiments; and Cb) to provide maximum chemical information by analyzing chemical data. The Institute had two formal themes and two informal themes.

**Jihadi Terrorists in Europe** Edwin Bakker, 2006

*Philoponus and the Rejection of Aristotelian Science* Richard Sorabji, 2010 A substantially revised and supplemented edition of the collected volume originally published, by Duckworth, in 1987.

*The City at Eye Level* Meredith Glaser, 2012 Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis on the street level. Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These "plinths" are the ground floors that negotiate between inside and outside, the public and private spheres. The City at Eye Level

qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a comprehensive guide for anyone concerned with improving or building plinths, including planners, building owners, property and shop managers, designers, and architects.

**The Dalton Laboratory Plan** Evelyn Dewey,1922

*Drying of Solids* Arun S. Mujumdar,1986-10-02 International contributors give wide coverage of the latest developments in the theory and practice of the drying of solids. Drying is one of the most common and energy-intensive operations in industry, and the cost is determined by the desired level of product moisture and the unit operation of nonthermal dewatering--hence the commissioned article on a new dewatering technique. Articles are balanced between theory and applications and practicing engineers should find a wealth of useful information. Topics covered include drying theory and modelling, drying of granular solids, drying of sheets, drying of foodstuffs, drying of agricultural products, solar drying, and drying of slurries.

**Groups Interacting with Technology** Joseph E. McGrath,Andrea B. Hollingshead,1993-12-14 Whether technology can improve a work group's productivity is one of the questions addressed in this volume, which examines how the use of computers and other electronic technology affects the behaviour of groups - and the results of a group's endeavours. Contributors also discuss the conditions which make group meetings via computer as effective as groups that meet face-to-face and what technologies do to the groups that use them. They examine and relate the major conceptual ideas employed by various research groups through a systematic review of the theory and evidence in the field. The volume concludes with a condensed classification of empirical evidence from studies of electronic support in collaborative groupwo

*Tight Oligopolies* Marcel Canoy,Sander Onderstal,2003

*The Global Sporting Arms Race* Veerle de Bosscher,2008 This title presents an international comparison of elite sports policies in six nations (Norway, Canada, Italy, Holland, the UK and Belgium). Drawing on research involving more than 1400 athletes, coaches, and performance directors, it evaluates and compares over 100 factors that lead to international sporting success.

The Ambivalence of the Sacred R. Scott Appleby,2000 This text explains what religious terrorists and religious peacemakers share in common and what causes them to take different paths in fighting injustice.

Molecular Biology in Medicinal Chemistry Theodor Dingermann,Dieter Steinhilber,Gerd Folkers,2006-03-06 This readily comprehensible book explains the identification of molecular targets via cellular assays, reporter genes or transgenic models, as well as surveying recent advances in the synthesis, separation and analysis of drugs. A special section is devoted to molecular genetics methods. With its examination of these novel methods and generous practical advice, this is essential reading for all pharmaceutical chemists, molecular biologists and medical researchers using molecular methods to study drugs and their action.

**Comparative Elite Sport Development** Barrie Houlihan,Mick Green,2008 'Comparative Elite Sport Development' focuses on the identification & development of elite sporting talent especially in Olympic sports. Written by a team of international contributors it applies a reflective & analytical approach, & both informs, & is informed by, established bodies of theory in policy analysis.

*Particle Astrophysics and Cosmology* M.M. Shapiro,Rein Silberberg,John P. Wefel,2012-12-06 Proceedings of the NATO Advanced Study Institute, Erice, Sicily, Italy, June 20-30, 1992

*Fundamentals of Electroweak Theory* Jiri Horejsi,2002 This monograph of Prof. Horejší is based on a series of his lectures which took place at Faculty of Mathematics and Physics of Charles University during 1990s. The author gives a thorough and easy-to-read account of the basic principles of the standard model of electroweak interactions, describes various theories of electromagnetic and weak interactions, and explains the gauge theory of electroweak interactions. Five appendices expound on some special techniques of the Standard Model, used in the main body of the text. Thanks to the author's pedagogical skills and professional erudition, the book can be read just with a preliminary knowledge of quantum field theory.
