Organometallic Compounds Michael Dub, 2013-12-01

This formula index contains the compounds of all three volumes. The molecular formulae show metal atoms first, followed by carbon, hydrogen, and other nonmetal atoms

arranged alphabetically. The monometallic and homopolymetallic compounds are followed by hetero-bimetallic, -trimetallic, and -polymetallic compounds. Heterometallic compounds are listed under each metal. To make the use of the index easier, for the most part, simplified linear structural formulae are given after the molecular formulae. In the case of compounds containing complicated structures, such as fused carbocyclic, hetero cyclic, or spiro rings, index names or a combination of group symbols and the parent compound names are used. Polymeric compounds are listed under their monomer formulae. Arseno, antimonio, and bismutho compounds appear under their monomeric formulae. Arsenomethane and arsenobenzene, which were isolated as a pentamer and hexamer, respectively, and also as oligomers, are listed under their monomeric formulae and under Ass and Ase, respectively. The reference given at the end of each entry includes the volume number under scored, followed by the page number. An asterisk following a reference page number signifies that the name or formula of this compound in the text was corrected. The lists of corrections and additions to the three volumes are appended to this volume. Several compounds missed in the main body of this index are compiled in the Additions section. We wish to express our appreciation to Mrs. Mary Alice Doiron for her perseverance shown in the preparation of this typescript.

Geologically Storing Carbon Peter Cook,2014-08-18 Carbon capture and geological storage (CCS) is presently the only way that we can make deep cuts in emissions from fossil fuel-based, large-scale sources of CO₂ such as power stations and industrial plants. But if this technology is to be acceptable to the community, it is essential that it is credibly demonstrated by world-class scientists and engineers in an open and transparent manner at a commercially significant scale. The aim of the Otway Project was to do just this. Geologically Storing Carbon provides a detailed account of the CO₂CRC Otway Project, one of the most comprehensive demonstrations of the deep geological storage or geosequestration of carbon dioxide undertaken anywhere. This book of 18 comprehensive chapters written by leading experts in the field is concerned with outstanding science, but it is not just a collection of scientific papers – it is about 'learning by doing'. For example, it explains how the project was organised, managed, funded and constructed, as well as the approach taken to community issues, regulations and approvals. It also describes how to understand the site: Are the rocks mechanically suitable? Will the CO₂ leak? Is there enough storage capacity? Is monitoring effective? This is the book

for geologists, engineers, regulators, project developers, industry, communities or anyone who wants to better understand how a carbon storage project really 'works'. It is also for people concerned with obtaining an in-depth appreciation of one of the key technology options for decreasing greenhouse emissions to the atmosphere.

Human Rights in New Zealand Judy McGregor, Sylvia Bell, Margaret Wilson, 2016-07-14 'The Universal Declaration of Human Rights, adopted while the world remained deeply shocked by the atrocities committed during the Second World War, was an inspirational creation. ... It is hard to conceive of this document being adopted today. Like most other nations, New Zealand has succumbed to a kind of world-weary acceptance that full enjoyment of universal human rights remains a distant dream.' Preface, Dame Silvia Cartwright, PCNZM, DBE, QSO New Zealand is proud of its human rights record with good reason. It was the first country in the world to give women the vote and it played a prominent part in the establishment of the United Nations and the Universal Declaration of Human Rights. New Zealand recently took a leading role in the creation of the world's newest human rights treaty, the Convention on the Rights of Persons with Disabilities. But just how good are things in practice? Are our governments living up to the promises they make when they ratify human rights treaties? *Human Rights in New Zealand* is a comprehensive survey of the seven major international human rights treaties which New Zealand has signed and ratified, as well as the Universal Periodic Review. Based on four years of research, undertaken with the support of the New Zealand Law Foundation, this book concludes that significant faultlines are emerging in the human rights landscape. It sets out an agenda for change with recommendations for practical action.
