[Monarchs and Hydrarchs](#) Christian Cooijmans,2020-03-13 As the politico-economic exploits of vikings in and around the Frankish realm remain, to a considerable extent, obscured by the constraints of a fragmentary and biased corpus of (near-)contemporary evidence, this volume approaches the available interdisciplinary data on a cumulative and conceptual level, allowing overall spatiotemporal patterns of viking activity to be detected and defined – and thereby challenging the notion that these movements were capricious, haphazard, and gratuitous in character. Set against a backdrop of continuous commerce and knowledge exchange, this overarching survey demonstrates the existence of a relatively uniform, sequential framework of wealth extraction, encampment, and political engagement, within which Scandinavian fleets operated as adaptable, ambulant polities – or ‘hydrarchies’. By delineating and visualising this framework, a four-phased conceptual development model of hydrarchic conduct and consequence is established, whose validity is substantiated by its application to a number of distinct regional case studies. The parameters of this abstract model affirm that Scandinavian movements across Francia were the result of prudent and expedient decision-making processes, contingent on exchanged intelligence, cumulative experience, and the ongoing individual and collective need for socioeconomic subsistence and enrichment. Monarchs and Hydrarchs will appeal to both students and specialists of the Viking Age, whilst serving as an equally valuable resource to those investigating early medieval Francia, Scandinavia, and the North Sea world as a whole.

[International RILEM Conference on Synergising Expertise towards Sustainability and Robustness of Cement-based Materials and Concrete Structures](#) Agnieszka Jędrzejewska,Fragkoulis Kanavaris,Miguel Azenha,Farid Benboudjema,Dirk Schlicke,2023-06-08 This book highlights the latest advances, innovations, and applications in cement-based materials (CBM) and concrete structures, as presented by leading international researchers and engineers at the International RILEM Conference on synergizing expertise toward sustainability and robustness of CBM and concrete structures (SynerCrete), held in Milos Island, Greece, on June 14-16, 2023. The aim of the conference was to discuss and arouse progress in research, development, and application of CBM and structural concrete through combination of expertise from distinct fields of knowledge, such as performance-based design, 3D modeling for analysis/design, building information modeling, and even robotics, while keeping focus on multiscale approaches at time and spatial levels. It covers a diverse range of topics concerning alternative concrete formulations for adaptation to climate change, performance-based and multiphysics/multiscale design and innovative testing, structural health monitoring and maintenance management, integral BIM-based planning, and resource-responsible building. The contributions, which were selected by means of a rigorous international peer-review process, present a wealth of exciting ideas that will open novel research directions and foster new multidisciplinary collaborations. The two volumes encompass more than 200 original contributions in the field.
