Transdisciplinary Engineering for Resilience: Responding to System Disruptions L. Newnes,2021-11-17 No one discipline or person can encompass all the knowledge necessary to solve complex, ill-defined problems, or

problems for which a solution is not immediately obvious. The concept of Concurrent Engineering (CE) – interdisciplinary, but with an engineering focus – was developed to increase the efficiency and effectiveness of the Product Creation Process (PCP) by conducting different phases of a product's life concurrently. Transdisciplinary Engineering has transcended CE, emphasizing the crucial importance of interdisciplinary openness and collaboration. This book presents the proceedings of the 28th ISTE International Conference on Transdisciplinary Engineering (TE2021). Held online from 5 – 9 July 2021 and entitled 'Transdisciplinary Engineering for Resilience: Responding to System Disruptions', this is the second conference in the series held virtually due to the COVID-19 pandemic. The annual TE conference constitutes an important forum for international scientific exchange on transdisciplinary engineering research, advances, and applications, and is attended by researchers, industry experts and students, as well as government representatives. The book contains 58 peer-reviewed papers, selected from more than 80 submissions and ranging from the theoretical and conceptual to strongly pragmatic and addressing industrial best practice. The papers are grouped under 6 headings covering theory; education and training; PD methods and digital TE; industry and society; product systems; and individuals and teams. Providing an overview of the latest research results and knowledge of product creation processes and related methodologies, the book will be of interest to all researchers,

design practitioners, and educators working in the field of Transdisciplinary Engineering.

Social - Local - Mobile Gerrit Heinemann, Christian Gaiser, 2014-11-20 In the future, shopping will be greatly influenced by a combination of localization issues, mobile internet at the point of sale, and use of social networks. This book focuses on the 'SoLoMo synergies' that arise from this paradigm shift in future shopping, which also promises new and effective marketing options for traditional retailers. It also reflects the current status of

research and business practice, analyzing the basic factors of SoLoMo in detail. The importance of Location-based Services (LBS) is elaborated and analyzed in an empirical study using a market based case of kaufDA – a leading German online shopping network. The evidence shows that customers see LBS as an attractive tool and are prepared to change their buying behavior. Though LBS is still in its early stages and its professional longevity remains to be seen, it also promises tremendous potential for the future.
