*The Bible of Clay* Julia Navarro, 2011-02-04 A compelling new novel that combines past and present in a riveting search for the source of the Book of Genesis itself. In her provocative second novel, Spanish author Julia Navarro takes readers on an exhilarating journey across centuries and continents, as an upstart archeologist and a murderous group of conspirators vie for a treasure that will rewrite history—an explosive account of the world's creation recorded millennia ago by a humble scribe onto the legendary Bible of Clay. Moving back and forth through time, from the tense months preceding the contemporary war in Iraq, to ancient Mesopotamia, to the atrocities of the last century, this tale of vengeance, obsession, and the wholesale plundering of the ancient world's most priceless treasures is populated by an international cast of political opportunists, ruthless killers, and unsullied seekers of truth. The Bible of Clay is historical fiction at its richest, a sweeping saga that challenges at once both conventional geopolitics and the very foundations of modern religion.

**China and the Middle East** James M. Dorsey, 2018-07-19 This book explores China's significant economic and security interests in the Middle East and South Asia. To protect its economic and security interests, China is increasingly forced to compromise its long-held foreign policy and defence principles, which include insistence on non-interference in the domestic affairs of others, refusal to envision a foreign military presence, and focus on the development of mutually beneficial economic and commercial relations. The volume shows that China's need to redefine requirements for the safeguarding of its national interests positioned the country as a regional player in competitive cooperation with the United States and the dominant external actor in the region. The project would be ideal for scholarly audiences interested in Regional Politics, China, South Asia, the Middle East, and economic and security studies.

**The New Digital Shoreline** Roger McHaney, 2023-07-03 Two seismic forces beyond our control – the advent of Web 2.0 and the inexorable influx of tech-savvy Millennials on campus – are shaping what Roger McHaney calls “The New Digital Shoreline” of higher education. Failure to chart its contours, and adapt, poses a major threat to higher education as we know it. These forces demand that we as educators reconsider the learning theories, pedagogies, and practices on which we have depended, and modify our interactions with students and peers—all without sacrificing good teaching, or lowering standards, to improve student outcomes. Achieving these goals requires understanding how the indigenous population of this new shoreline is different. These students aren't necessarily smarter or technologically superior, but they do have different expectations. Their approaches to learning are shaped by social networking and other forms of convenient, computer-enabled and mobile communication devices; by instant access to an over-abundance of information; by technologies that have conferred the ability to personalize and customize their world to a degree never seen before; and by time-shifting and time-slicing. As well as understanding students' assumptions and expectations, we have no option but to familiarize ourselves with the characteristics and applications of Web 2.0—essentially a new mind set about how to use Internet technologies around the concepts of social computing, social media, content sharing, filtering, and user experience. Roger McHaney not only deftly analyzes how Web 2.0 is shaping the attitudes and motivations of today's students, but guides us through the topography of existing and emerging digital media, environments, applications, platforms and devices – not least the impact of e-readers and tablets on the future of the textbook – and the potential they have for disrupting teacher-student relationships; and, if appropriately used, for engaging students in their learning. This book argues for nothing less than a reinvention of higher education to meet these new realities. Just adding technology to our teaching practices will not suffice. McHaney calls for a complete rethinking of our practice of teaching to meet the needs of this emerging world and envisioning ourselves as connected, co-learners with our students.

**Leading Academic Change** Elaine P. Maimon, 2023-07-03 Written by a sitting college president who has presided over transformative change at a state university, this book takes on the big questions and issues of change and change management, what needs to be done and how to do it. Writing in a highly accessible style, the author recommends changes for higher education such as the reallocation of resources to support full-time faculty members in foundation-level courses, navigable pathways from community college to the university, infusion rather than proliferation of courses, and the role of state universities in countering the disappearance of the middle class. The book describes how these changes can be made, as well as why we must make them if our society is to thrive in the twenty-first century.

**Learning to Read Across Languages** Keiko Koda, Annette M. Zehler, 2008-03-03 This book systematically examines how learning to read occurs in diverse languages, and in so doing, explores how literacy is learned in a second language by learners who have achieved at least basic reading skills in their first language. As a consequence of rapid globalization, such learners are a large and growing segment of the school population worldwide, and an increasing number of schools are challenged by learners from a wide variety of languages, and with distinct prior literacy experiences. To succeed academically these learners must develop second-language literacy skills, yet little is known about the ways in which they learn to read in their first languages, and even less about how the specific nature and level of their first-language literacy affects second-language reading development. This volume provides detailed descriptions of five typologically diverse languages and their writing systems, and offers comparisons of learning-to-read experiences in these languages. Specifically, it addresses the requisite competencies in learning to read in each of the languages, how language and writing system properties affect the way children learn to read, and the extent and ways in which literacy learning experience in one language can play a role in subsequent reading development in another. Both common and distinct aspects of literacy learning experiences across languages are identified, thus establishing a basis for determining which skills are available for transfer in second-language reading development. Learning to Read Across Languages is intended for researchers and advanced students in the areas of second-language learning, psycholinguistics, literacy, bilingualism, and cross-linguistic issues in language processing.

**The Study Problem** Louis Frederick Rahr, 1925

Pedagogical Content Knowledge in STEM Stephen Miles Uzzo, Sherryl Browne Graves, Erin Shay, Marisa Harford, Robert Thompson, 2018-10-25 This volume represents both recent research in pedagogical content knowledge (PCK) in science, technology, engineering and math (STEM), as well as emerging innovations in how PCK is applied in practice. The notion of "research to practice" is critical to validating how effectively PCK works within the clinic and how it can be used to improve STEM learning. As the need for more effective educational approaches in STEM grows, the importance of developing, identifying, and validating effective practices and practitioner competencies are needed. This book covers a wide range of topics in PCK in different school levels (middle school, college teacher training, teacher professional development), and different environments (museums, rural). The contributors believe that vital to successful STEM education practice is recognition that STEM domains require both specialized domain knowledge as well as specialized pedagogical approaches. The authors of this work were chosen because of their extensive fieldwork in PCK research and practice, making this volume valuable to furthering how PCK is used to enlighten the understanding of learning, as well as providing practical instruction. This text helps STEM practitioners, researchers, and decision-makers further their interest in more effective

STEM education practice, and raises new questions about STEM learning.
