Henry Ossawa Tanner Henry Ossawa Tanner,Anna O. Marley,2012 “This book constitutes a very welcome contribution to the public appreciation and scholarly study of Henry Ossawa Tanner, a painter of considerable significance in both Europe and America, and one whose religious imagery merits careful consideration. These well-researched essays by an international team of scholars offer substantial reflections on complex issues of race and religion, and situate the artist’s work and career within the context of his life and times. This is a robust framing of Tanner as a cultural phenomenon and one that readers will find quite rewarding.”—David Morgan, Professor of Religion at Duke University and author of *The Embodied Eye: Religious Visual Culture and the Social Life of Feeling* “Henry Ossawa Tanner has finally been recognized as an important artist in the last twenty years, and is now firmly part of the American canon as the first major African American painter to emerge from the academy. This book enriches our understanding of Tanner’s historic place in American art by considering his work as an early modernist religious artist—a status entwined with his race, but not defined by it. These essays, by an impressive collection of scholars, are full of substantially new material, and succeed in broadening our conception of Tanner’s life and work.”—Bruce Robertson, Professor of Art and Architecture at the University of California, Santa Barbara.

Resisting Categories: Latin American and/or Latino? Mari Carmen Ramirez,Tomas Ybarra-Frausto,Hector Olea,2012-04-24 DIV This first volume of the Critical Documents of 20th-Century Latin American and Latino Art series published by the International Center for the Arts of the Americas at the Museum of Fine Arts, Houston, presents 168 crucial texts written by influential artists, critics, curators, journalists, and intellectuals whose writings shed light on questions relating to what it means to be Latin American and/or Latino. Reinforced within a critical framework, the documents address converging issues, including: the construct of Latin-ness itself; the persistent longing for a continental identity; notions of Pan–Latin Americanism; the emergence of collections and exhibitions devoted specifically to Latin American” or Latino art; and multicultural critiques of Latin American and Latino essentialism. The selected documents, many of which have never before been published in English, span from the late fifteenth century to the present day. They encompass key protagonists of this comprehensive history as well as unfamiliar figures, revealing previously unknown facets of the questions and issues at play. The book series complements the thousands of seminal documents now available through the ICAA Documents of 20th-Century Latin American and Latino Art digital archive, <http://icaadocs.mfah.org>. Together they establish a much-needed intellectual foundation for the exhibition, collection, and interpretation of art produced in Latin America and among Latino populations in the United States. /div

Brain Mapping Hugues Duffau,2014-12-13 The goal of this book is to make a link between fundamental research in the field of cognitive neurosciences, which now benefits from a better knowledge of the neural foundations of cerebral processing, and its clinical application, especially in neurosurgery – itself able to provide new insights into brain organization. The anatomical bases are presented, advances and limitations of the different methods of functional cerebral mapping are discussed, updated models of sensorimotor, visuospatial, language, memory, emotional, and executive functions are explained in detail. In the light of these data, new strategies of surgical management of cerebral lesions are proposed, with an optimization of the benefit–risk ratio of surgery. Finally, perspectives about brain connectivity and plasticity are discussed on the basis of translational studies involving serial functional neuroimaging, intraoperative cortico-subcortical electrical mapping, and biomathematical modeling of interactions between parallel distributed neural networks.
