**Proceedings of the 10th Focus Conference (TFC 2023)** Manyane Makua,Mariam Akinlolu,Mashango Sithole,Phiwayinkosi Gumede,Cebo Nyondo,Ntombikhona Khuzwayo,Mandlenkosi Mhlongo,2023-12-05 This is an open access book. The 2023 Focus Conference will focus on Goal Four (Quality Education) of the United Nations (UN) Sustainable Development Goals (SGD). Goal Four is seized with providing "equal access for all women and men to affordable and quality technical, vocational and tertiary education including university." Quality education, in this context, means the ability to function, provide and derive value in society. The theme of the conference is therefore coined as "The Role of Higher Education in the Attainment of Sustainable Quality Education." Through this theme, the conference will provide a space for participants to share practical knowledge, experiences, and possible solutions to the myriad of problems that confront the higher education sector. Universities are often thought of as ivory towers far removed from the realities that confront global societies. To compound this, higher education is increasingly being questioned for its relevance in providing practical and innovative solutions to existing societal problems. Such questions often navigate around the relevance of the academic programmes being offered, curriculum, the capacity of staff, employability of graduates, and generally the ability of these institutions to understand why they exist. Indeed, higher education's role in creating a sustainable future will presumably take on greater importance as the world continues to become increasingly globalised and interdependent.

**Light Scattering Technology for Food Property, Quality and Safety Assessment** Renfu Lu,2017-11-22 Light Scattering Technology for Food Property, Quality and Safety Assessment discusses the development and application of various light scattering techniques for measuring the structural and rheological properties of food, evaluating composition and quality attributes, and detecting pathogens in food. The first four chapters cover basic concepts, principles, theories, and modeling of light transfer in food and biological materials. Chapters 5 and 6 describe parameter estimation methods and basic techniques for determining optical absorption and scattering properties of food products. Chapter 7 discusses the spatially-resolved measurement technique for determining the optical properties of food and biological materials, whereas Chapter 8 focuses on the time-resolved spectroscopic technique for measuring optical properties and quality or maturity of horticultural products. Chapter 9 examines practical light scattering techniques for nondestructive quality assessment of fruits and vegetables. Chapter 10 presents the theory of light transfer in meat muscle and the measurement of optical properties for determining the postmortem condition and textural properties of muscle foods and meat analogs. Chapter 11 covers the applications of spatially-resolved light scattering techniques for assessing quality and safety of animal products. Chapter 12 looks into light scattering for milk and dairy processing. Chapter 13 examines the applications of dynamic light scattering for measuring the microstructure and rheological properties of food. Chapter 14 shows the applications of a biospeckle technique for assessing the quality and condition of fruits and vegetables. Chapter 15 provides a detailed description of Raman scattering spectroscopic and imaging techniques in food quality and safety assessment. Chapter 16, the final chapter, focuses on applications of light scattering techniques for the detection of food-borne pathogens.

**Light Microscopy in Biology** Alan J. Lacey,1999-06-03 Since the first edition of *Light Microscopy in Biology: A Practical approach* was published, techniques in modern light microscopy have improved considerably. This fully updated edition includes revised topics from the first edition as well as coverage of techniques and technologies that have been developed since it was published. As before, the book starts with an explanation of the basic techniques, and goes on to describe current methods in: chromosome microscopy, immunohistochemistry, fluorescence microscopy, image building and video microscopy. Totally new topics covered include: confocal microscopy, calcium and pH imaging, microinjection techniques and nanovid microscopy. There are also whole chapters now devoted to reflection contrast microscopy and histomorphometry. This new edition will be of great interest to postgraduate and postdoctoral researchers in biomedicine and cell biology - both those experienced with light microscopic techniques and newcomers to the field.

**Laser Interaction and Related Plasma Phenomena** Heinrich Hora,2012-12-06 This 6th International Workshop in the series starting in 1969 was held at the Naval Postgraduate School in Monterey, California from 25-29 October, 1982 under the continuing directorship of Heinrich Hora. The co-directorship of the late Helmut Schwarz who helped found the series was assumed by George Miley. Fred Schwirzke served as the local organizer. Following a commemoration for Helmut Schwarz, Heinrich Hora commented that the long title of the workshop is originally due to Nicholas Bloembergen, who prophetically envisaged that related plasma phenomena such as is involved in particle beam fusion is also of enormous interest to the laser community. The enthusiastic response of the workshop advisors and the 82 participants from 11 countries supports the need for a continuation of this workshop-type meeting where an immediate discussion and documentation of new results and conceptual formulations occurs, a process not possible through the usual journals. The main sponsor of this year's conference was the Fusion Studies Laboratory of the University of Illinois. Thanks are also due to the Naval Postgraduate School, Monterey, and the Department of Theoretical Physics, University of New South Wales. The conference was made feasible by the contributions of the participants, and they and their institutions deserve many thanks. Special recognition is due to the Conference Secretary, Chris Stalker (Urbana), as well as to Marie Wesson (Sydney) and to Patricia Vardaro (Monterey).

*IAENG Transactions on Engineering Technologies* Haeng Kon Kim,Sio-Iong Ao,Mahyar A. Amouzegar,Burghard B. Rieger,2013-09-12 *IAENG Transactions on Engineering Technologies* contains forty-nine revised and extended research articles, written by prominent researchers participating in the conference. Topics covered include circuits, engineering mathematics, control theory, communications systems, systems engineering, manufacture engineering, computational biology, chemical engineering, and industrial applications. This book offers the state of art of

tremendous advances in engineering technologies and physical science and applications, and also serves as an excellent source of reference for researchers and graduate students working with/on engineering technologies and physical science and applications.

**Cosmetics Applications of Laser and Light-Based Systems** Gurpreet Ahluwalia,2008-12-16 In recent decades, cosmetic science has found new high-potency, bioactive ingredients that produce visibly superior skin benefits to the consumer. Light-based devices, including lasers and intense-pulsed light systems, have been used for years in the treatment of cutaneous vascular and pigmented lesions, yet have only recently appeared in cosmetic applications, beauty salons and spas. Meanwhile, ever more research and development is being performed with the intent of bringing them to the home-use market. This book is the first to introduce a range of currently used, or under development, laser- and light-based technologies that will provide greater cosmetic benefits to the consumer. It explains the basic physics of light-based technologies, the bio-physical principles behind their mechanism of action, and their applications in many cosmetic procedures. The fundamentals of skin and hair physiology (relevant to the understanding of actions of various cosmetics) are also explained, as are: cosmeceuticals; topical drugs for cosmetic benefits; non-invasive and invasive options available for beauty treatments, and how all this fits in with the emerging light-based technologies. Individual chapters are devoted to the various skin and hair conditions where light-based systems are currently used. Treatments discussed include the rejuvenation and toning of damaged skin; skin resurfacing and microdermabrasion; hair removal and growth reduction; wrinkle reduction; acne treatment and cellulite. Finally, the book examines the synergy of cosmeceuticals and topical bioactive agents with light-based technologies, safety issues, a regulatory perspective for OTC marketing, and concludes with a discussion of the business aspects related to home-use of light-based devices. The first book to introduce this emerging technology to the personal care industry Explains their applications in many cosmetic procedures Devotes individual chapters to common skin and hair conditions
