Surgical Oncology Manual Frances C. Wright, Jamie Escallon, Moises Cukier, Melanie E. Tsang, Usmaan Hameed, 2016-05-05 In 2011, the General Surgical Oncology Fellowship Program at the University of Toronto sought to develop a practical approach to common oncology problems faced by general surgeons. This was a collaboration between current and previous fellows, as well as staff at the University of Toronto, including experts from Princess Margaret Cancer Centre, Odette Cancer Centre (at Sunnybrook Health Sciences Centre), Mount Sinai Hospital, Toronto General Hospital, St. Michael's Hospital, and St. Joseph's Hospital. This effort culminated in the publication by the program of the *Surgical Oncology Manual* in March, 2012. The first edition of the Manual has received excellent feedback on its utility from both trainees and practicing surgeons alike. With the ever-changing landscape of surgical oncology, this edition is updated with new evidence and topics in the field, including three new chapters: Desmoid Fibromatosis and Dermafibrosarcoma Protuberans, Merkel Cell Carcinoma, and "Non-melanoma Skin Cancers". The Manual provides a succinct review of surgical oncology with a summary of key evidence in the work-up, treatment, and follow-up for each cancer site. A clear, concise format has proven invaluable to the intended audience: surgical oncology fellows, practicing general surgeons, and general surgery residents. In addition, each chapter contains a section of "Pearls", derived from the wide breadth of experience, skills, and abilities of the contributors.

Textbook of Gastrointestinal Oncology Suayib

Yalcin, Philip A. Philip, 2019-09-05 This textbook discusses core principles and practices in gastrointestinal oncology

and covers a wide range of practice areas such as pathology and radiologic images, epidemiology, genetics, staging, multidisciplinary management of specific gastrointestinal cancer, and pathology for each primary tumor site. The comprehensive coverage makes Textbook of Gastrointestinal Oncology a useful resource for the practitioner wishing to gain a greater understanding of the principles of managing malignant gastrointestinal disease, as well as medical oncology fellows, surgeons, radiation oncologists, gastroenterologists and fellows, and residents.

Manual for Night-Time Emergencies for Pediatric Hematology-Oncology Fellows Julie Blatt, April Evans, Jessica Benjamin-Eze, 2024-09-06 Being on call as a pediatric resident or a pediatric hematology-oncology fellow can cause great anxiety. In addition to the relatively common patient with chemotherapy-related fever and neutropenia, there is the anticipation of problems that a trainee may have read about but not yet actually seen - the adolescent newly presenting with a white blood cell count of 600,000/mm³, the 2 year old spitting up blood with a platelet count of 2,000/ mm³ and a hemoglobin of 5g/dL, the child who comes to the ER with difficulty walking and is found to have a paraspinal mass on MRI. Most issues can wait until the next day when more senior practitioners are around, but some are true medical emergencies and just can't. This manual is intended as a one-stop solution for such frantic moments - a quick resource to bridge the hours between the start of night call and morning rounds that focuses on what needs to be done immediately to avoid hurting a patient. It offers succinct guidelines and algorithms to address the emergencies most likely to come up overnight. For those tempted to turn to AI for quick solutions, there are some salutary lessons from responses AI has given when asked about such emergencies.

Evolution of Radiation Oncology at Massachusetts

General Hospital Herman D. Suit, Jay S.

Loeffler, 2011-02-04 The Massachusetts General Hospital (MGH) has a history of excellence and is internationally recognized as a world class medical center, providing quality medical care, advancing medicine through clinical and laboratory research and facilitating the education of exceptional health care professionals. The Massachusetts General Hospital Radiation Oncology Department, staff, residents and fellows, past and present, concur that MGH stands for Man's Greatest Hospital. This decidedly immodest assessment is widely viewed amongst this group as being manifestly true, and that perception is clearly reflected in a marvelous esprit de corp. Such an unequivocally positive attitude is solidly based on the judgment that the best possible care is provided to each MGH patient, i.e. the patient is, in fact, Number One. There is a deep sense of pride in the contributions made by this department to the scientific advancement of oncology, and to progressively and substantially increasing the proportion of patients who are free of tumor and of treatment related morbidity. Evolution of Radiation of Oncology at Massachusetts General Hospital is the work of the former Chair of the Department, Herman D. Suit. From 1970 - 2000, his guidance and management of this Department brought it to recognition as a world class center. Dr. Suit was key in the development and building of the Department that now includes The Northeast Proton Therapy Center at the MGH. His passion for the science of radiation therapy and its evolving growth through the years is evident in this book. He has assembled a fascinating chronicle, beginning with the creation of MGH in 1811 followed by personal experiences that culminated with his leadership of the Radiation Oncology Department.

Urologic Oncology Kelly L. Stratton, Alicia K.

Morgans, 2022-01-28 Urologists and medical oncologists have witnessed a rapid growth in systemic therapeutic options for treating genitourinary malignancies that increasingly integrates radiation therapy to primary cancers, nodal beds, and even metastatic sites. The culmination of these advances has been the creation of multidisciplinary teams that expertly provide comprehensive care to patients with urologic cancers. This book provides the framework to create such a multidisciplinary clinical team focused on the treatment of urologic malignancies with representation from urologists, medical oncologists, and additional specialists who work together to provide optimal team-based care. The book integrates advanced systemic therapeutics including immune-based and targeted therapies. Readers gain a better understanding of the benefit of multidisciplinary co-management through specific examples such as hormone sensitive metastatic prostate cancer, neoadjuvant chemotherapy for muscle invasive bladder cancer, and immunotherapy approaches to advanced bladder and kidney cancer. The book also discusses the integration of genomic tumor characterization and personalized medicine into surgical planning, tumor biopsies, and chemo-

immunotherapy selection, emphasizing the expansion of new therapeutics for urologic malignancies and the changing definitions of disease progression. **Urologic Oncology: Multidisciplinary Care for Patients** is a comprehensive resource for urologists, medical oncologists, radiation oncologists, genetic counselors, fellows in urologic oncology and medical oncology, residents in urology and radiation oncology, advanced practice providers, practice managers, and pharmaceutical representatives.

FDG PET/CT in Clinical Oncology Jasna

Mihailovic, Stanley J. Goldsmith, Ronan P. Killeen, 2012-10-28
FDG PET/CT has rapidly emerged as an invaluable combined imaging modality that provides both anatomic and functional information. This book, comprising a collection of images from oncology cases, is organized according to the role of FDG PET/CT in the evaluation and management of oncology patients, and only secondarily by organ or tumor entity. In this way, it reflects the issues that clinicians actually address, namely: identification of an unknown or unsuspected primary; determination of the extent of disease; evaluation of response to therapy; and surveillance after response, i.e., detection of recurrent disease. In total, 100 cases involving different primary tumors are presented to illustrate findings in these different circumstances. **FDG PET/CT in Clinical Oncology** will be of great value to all newcomers to this field, whether medical students, radiology, nuclear medicine, or oncology fellows, or practicing physicians.

Cancer Microenvironment and Therapeutic Implications

Gianfranco Baronzio, Giammaria Fiorentini, Christopher R. Cogle, 2009-04-10 In the post-genomic era, cancer is a genetic disease. However, cancer genotype does not always equal cancer phenotype. Cancers with the same genetic abnormalities don't always behave the same. Understanding and eradicating cancers will require an appreciation for cancer's ecology. This book is the first to comprehensively explore and critically appraise cancer microenvironments and host interactions with an eye towards exploiting our understanding for new treatments. The team of contributors share amongst them impressive experiences at the laboratory bench and in the clinic. These physician-scientists have dedicated themselves to the tension between the urgency for cures and the technical challenges of discovery. The target audience includes clinical oncologists, clinical hematologists, research oncologists, research hematologists, immunologists, stem cell researchers, oncology and hematology fellows (trainees), oncology educators (graduate and undergraduate levels), and course book for graduate students and undergraduate students.
