*Beyond the Carbon Economy* Don Zillman,Catherine Redgwell,Yinka Omorogbe,Lila K. Barrera-Hernández,2008-03-06 The present energy economy, with its heavy dependence on fossil fuels, is not sustainable over the medium to long term for many interconnected reasons. Climate change is now recognized as posing a serious threat. Energy and resource decisions involving the carbon fuels therefore play a large role in this threat. Fossil fuel reserves may also be running short and many of the major reserves are in politically unstable parts of the world. Yet citizens in nations with rapidly developing economies aspire to the benefits of the modern energy economy. China and

India alone have 2.4 billion potential customers for cars, industries, and electrical services. Even so, more than half of the world's citizens still lack access to energy. Decisions involving fossil fuels are therefore a significant part of the development equation. This volume explains how the law can impede or advance the shift to a world energy picture significantly different from that which exists today. It first examines the factors that create the problems of the present carbon economy, including environmental concerns and development goals. It then provides international and regional legal perspectives, examining public international law, regional legal structures, the responses of international legal bodies, and the role of major international nongovernmental actors. The book then moves on to explore sectoral perspectives including the variety of renewable energy sources, new carbon fuels, nuclear power, demand controls, and energy efficiency. Finally, the authors examine how particular States are, could, or should, be adapting legally to the challenges of moving beyond the carbon economy.

**Societies beyond Oil** John Urry, 2013-01-10 What would a de-carbonised society be like? What are the implications of a general de-globalisation for our social futures? How will our high-carbon patterns of life be restructured in a de-energized world? As global society gradually wakes up to the new reality of peak oil, these questions remain unanswered. For the last hundred years oil made the world go round, and as we move into the century of 'tough oil' this book examines some profound consequences. It considers what societies

would be like that are powering down; what lessons can be learned from the past about de-energized societies; will there be rationing systems or just the market to allocate scarce energy? Can virtual worlds solve energy problems? What levels of income and wellbeing would be likely? In this groundbreaking book, John Urry analyzes how the twentieth century created a kind of mirage of the future that is unsustainable into even the medium term and envisions the future of an oil-dependent world facing energy descent. Without a large-scale plan B, how can the energizing of society possibly be going into reverse?

**Beyond Oil** Kenneth S. Deffeyes, 2006-06-13 This book explains both why the decline of our most precious fuel is inevitable and how challenging it will be to cope with what comes next.—Richard E. Smalley, University Professor, Rice University, and 1996 Nobel laureate With world oil production about to peak and inexorably head toward steep decline, what fuels are available to meet rising global energy demands? That question, once thought to address a fairly remote contingency, has become ever more urgent, as a spate of books has drawn increased public attention to the imminent exhaustion of the economically vital world oil reserves. Kenneth S. Deffeyes, a geologist who was among the first to warn of the coming oil crisis, now takes the next logical step and turns his attention to the earth's supply of potential replacement fuels. In *Beyond Oil*, he traces out their likely production futures, with special reference to that of oil, utilizing the same analytic tools developed by his former colleague,

the pioneering petroleum-supply authority M. King Hubbert. The bad news in this book is made bearable by the author's witty, conversational writing style. If my college econ textbooks had been written this way, I might have learned economics. –Rupert Cutler, The Roanoke Times

Food and Fuel Andrew Heintzman, Evan Solomon, 2009  
Culls top-selected essays from Feeding the Future and Fueling the Future to explore the reasons for food and fuel shortages and what might be done to resolve them, in a volume that includes pieces by such thinkers as Thomas Homer-Dixon, Gordon Laird, and Jeremy Rifkin. Original.

Fuel Prices Great Britain: Parliament: House of Commons: Trade and Industry Committee, 2005-06  
The Committee's report examines the recent price increases in gas supply and the resulting rises in electricity prices (as about 40 per cent of electricity generation in England and Wales is gas-fired), focusing on the effects of the price increases on all types of energy customers. The report seeks to assess whether the rises are a temporary response to short-term supply problems or the start of a long-term increase in UK energy prices, and to consider possible responses by Ofgem, the regulator of the gas and electricity markets, and the DTI to the problem. Topics discussed include: Ofgem's report into wholesale gas prices and reactions to it; the decline in production from the UK Continental Shelf (UKCS); gas storage and supply issues; the behaviour and

transparency of the gas market and regulation issues; oil indexation in gas contracts; competition within European markets; vertical integration; the electricity market; new infrastructure projects; and the future of gas prices.

**Beyond Lion Rock** Gavin Young, 2012-04-26 In 1946 Roy Farrell and Syd de Kantzow's beloved, battered wartime DC-3 touched down in Shanghai for the first time. On board was a cargo of morning coats and toothbrushes from New York, forging the first post-war supply route across the treacherous eastern Himalayas. The international airline now known as Cathay Pacific was born. Gavin Young tells the swashbuckling story of an empire of the air, a thrilling, action-packed adventure that began in an era closer to Biggles and biplanes held together by wire and safety pins than to our own. 'Pioneers like Farrell and de Kantzow would have had plenty of time to enjoy the dawn over Kangchebjunga. Would they think of us with envy or contempt, cruising seven miles up with hundreds of passengers, air-conditioning, in-flight concerts, movies, hot four-course meals with an elaborate wine line and all mod-cons? . . . All this in forty years! Could the world have changed so much and so fast?' This is Gavin Young himself eloquently reflecting on the extraordinary changes in air travel. There can be little doubt where his own sympathies lie.
