NASA Formal Methods Guillaume Brat,Neha Rungta,Arnaud Venet,2013-05-09 This book constitutes the refereed proceedings of the 5th International Symposium on NASA Formal Methods, NFM 2013, held in Moffett Field, CA, USA, in May 2013. The 28 revised regular papers presented together with 9 short papers talks were carefully reviewed and selected from 99 submissions. The topics are organized in topical sections on model checking; applications of formal methods; complex systems; static analysis; symbolic execution; requirements and specifications; probabilistic and statistical analysis; and theorem proving.

Mechanics of Solids and Fluids Franz Ziegler,2012-12-06 This book offers a unified presentation of the concepts and most of the practicable principles common to all branches of solid and fluid should be appealing to advanced undergraduate mechanics. Its design students in engineering science and should also enhance the insight of both graduate students and practitioners. A profound knowledge of applied mechanics as understood in this book may help to cultivate the versatility that the engineering community must possess in this modern world of high-technology. This book is, in

fact, a reviewed and extensively improved second edition, but it can also be regarded as the first edition in English, translated by the author himself from the original German version, Technische Mechanik der festen und flüssigen Körper, published by Springer-Verlag, Wien, in 1985. Although this book grew out of lecture notes for a three semester course for advanced undergraduate students taught by the author and several colleagues during the past 20 years, it contains sufficient material for a subsequent two-semester graduate course. The only prerequisites are basic algebra and analysis as usually taught in the first year of an undergraduate engineering curriculum. Advanced mathematics as it is required in the progress of mechanics teaching may be taught in parallel classes, but also an introduction into the art of design should be offered at that stage.

Transactions on Rough Sets XXIII James F. Peters, Andrzej

Skowron, Rabi Nanda Bhaumik, Sheela Ramanna, 2023-01-01 The

LNCS journal Transactions on Rough Sets is devoted to the entire spectrum of rough sets related issues, from logical and mathematical foundations, through all aspects of rough set theory

and its applications, such as data mining, knowledge discovery, and intelligent information processing, to relations between rough sets and other approaches to uncertainty, vagueness, and incompleteness, such as fuzzy sets and theory of evidence.

Volume XXIII in the series is a continuation of a number of research streams that have grown out of the seminal work of Zdzislaw Pawlak during the first decade of the 21st century.

Handbook of Cognitive Aging Scott M. Hofer, Duane F Alwin, 2008-03-20 Provides a unique perspective. I am particularly impressed with the sections on innovative design and methods to investigate cognitive aging and the integrative perspectives. None of the existing texts covers this material to the same level. —Donna

J. La Voie, Saint Louis University The emphasis on integrating the literature with theoretical and methodological innovations could have a far-reaching impact on the field. —Deb McGinnis, Oakland University The Handbook of Cognitive Aging: Interdisciplinary Perspectives clarifies the differences in patterns and processes of cognitive aging. Along with a comprehensive review of current research, editors Scott M. Hofer and Duane F. Alwin provide a solid foundation for building a multidisciplinary agenda that will stimulate further rigorous research into these complex factors. Key Features Gathers the widest possible range of perspectives by including cognitive aging experts in various disciplines while maintaining a degree of unity across chapters Examines the limitations of the extant literature, particularly in research design and measurement, and offers new suggestions to guide future research Highlights the broad scope of the field with topics ranging from demography to development to neuroscience, offering the most complete coverage available on cognitive aging

An Introduction to Modern Variational Techniques in Mechanics and Engineering Bozidar D. Vujanovic, Teodor M. Atanackovic, 2012-12-06 * Atanackovic has good track record with Birkhauser: his Theory of Elasticity book (4072-X) has been well

reviewed. * Current text has received two excellent pre-pub reviews. * May be used as textbook in advanced undergrad/beginning grad advanced dynamics courses in engineering, physics, applied math departments. *Also useful as self-study reference for researchers and practitioners. * Many examples and novel applications throughout. Competitive literature--Meirovich, Goldstein---is outdated and does not include the synthesis of topics presented here.

Virus-Like Particles Paul Pumpens,Peter Pushko,2022-05-22

This book represents the first complete and systematic guide to the virus-like particles (VLPs) and their applications as vaccines, therapeutic tools, nanomaterials, and nanodevices. The grouping of the VLPs follows the most recent virus taxonomy and the traditional Baltimore classification of viruses, which are based on the genome structure and mechanism of mRNA synthesis. Within each of the seven Baltimore classes, the order taxon serves as a framework of the chapter's arrangement. The term VLP is used as a universal designation for the virus-, core-, or capsid-like structures, which became an important part of the modern molecular virology. The 3D structures, expression systems, and nanotechnological

applications are described for VLPs in the context of the original viruses and uncover their evolving potential as novel vaccines and medical interventions. Key Features Presents the first full guide to the VLP nanotechnology, classified by current viral taxonomy Outlines specific structural properties and interconnection of the virions and VLPs Explains generation and characteristics of VLPs produced by various expression systems Offers up-to-date summary of VLPs designed as vaccines and delivery tools Unveils interconnection of VLPs with novel organic and inorganic nanomaterials

Servizi Generali di Impianto Emilio Ferrari, 2022-01-20 Questo testo tratta i criteri e le metodologie che presiedono alla scelta, progettazione e realizzazione dei principali impianti di servizio operanti a supporto dei sistemi produttivi, indipendentemente dal loro particolare processo tecnologico: per questo motivo tale categoria impiantistica viene indicata come servizi generali di impianto, o facilities per usare il termine anglosassone. Data la ampiezza e la vastità della categoria si è resa necessaria una sintesi. Gli impianti trattati riguardano il servizio distribuzione fluidi, il servizio produzione di energia termica, il servizio produzione e distribuzione di energia elettrica, il servizio illuminazione ed il

servizio protezione dai rumori per il benessere e la sicurezza negli ambienti di lavoro. L'obiettivo è quello di fornire soprattutto agli studenti dei corsi universitari dell'area produzione o gestionale, ma anche ai tecnici operanti nella realtà industriale, una visione organica dei criteri generali per la scelta ed il dimensionamento dei più comuni impianti di servizio diffusi nei sistemi produttivi, con riferimento agli ambienti industriali ed al terziario, sia sotto l'aspetto tecnico-progettuale, sia sotto quello tecnico-gestionale, mediante l'indicazione delle norme e dei regolamenti vigenti, con particolare enfasi all'aspetto della sicurezza. La trattazione, corredata, ovunque possibile, di esempi applicativi supportati da relazioni analitiche, vuole anche costituire una occasione per adottare un approccio risolutivo quantitativo, di fondamentale importanza per la formazione dell'ingegnere industriale.

Part II (LNCS 8888) comprises topics such as computational bioimaging , recognition, computer vision, applications, face processing and recognition, virtual reality, and the poster sessions.

Energy and Environmental Outlook for South Asia Muhammad Asif, 2021-01-07 South Asia constitutes a key geography in the world today considering its large population and related daunting energy and environmental challenges. Many countries in the region are faced with a growing gap between energy demand and local resources, resulting in an increased dependence on imports. According to the International Energy Agency (IEA), the energy demand in South Asia will grow at a rate more than double that of

the world average in the coming decades. This book addresses the critical subject of energy and environmental outlook for South Asia and presents the wider challenges and the responses at the national and regional level. Features: Discusses and addresses the ongoing energy and environmental challenges faced by almost a quarter of the global population Includes dedicated chapters for each country and presents analysis and recommendations by regional experts Examines how deteriorating air quality and persistent natural disasters are severe environmental challenges for the region Discusses the implications of global warming and climate change for South Asia Includes practical case studies throughout Energy and Environmental Outlook for South Asia will benefit a wide range of stakeholders from various fields including but not limited to energy, environment, economics, national security, and sustainable development. It also serves as a valuable resource for academics, researchers, analysts, policymakers, and representatives of utilities, industry, professional bodies, financial institutions, think tanks, and developmental organizations to better plan their initiatives, activities, and policies. It will help countries in the region and also those around the world by learning from shared experience, and ideally by collaborating for energy and

environmental prosperity.

Thermal Protection Modeling of Hypersonic Flying Apparatus
A.S. Yakimov,2018-03-31 This book is devoted to studies of unsteady heat and mass exchange processes taking into account thermochemical destruction of thermal protective materials, research of transpiration cooling systems, thermal protection of

composite materials exposed to low-energy disturbances, as well as the numerical solution of heat and mass transfer of the exchange. It proposes several mathematical models of passive and active thermal protection systems with regard to factors such as surface ablation, surface roughness, phase transition of a liquid in porous materials, rotation of the body around its longitudinal axis, and exposure to low-energy disturbances. The author studies the possibilities to control thermochemical destruction and heat mass exchange processes in transpiration cooling systems exposed to low-energy disturbances. The numerical analysis of the heat and mass exchange process in carbon plastics under repeated impulse action is also presented. The numerical solutions of problems are compared with the known experimental data. The book is intended for specialists in the field of thermal protection and heat mass exchange, as well as graduate and undergraduates in physics and mathematics.
