Studies on Time Series Applications in Environmental Sciences Alina

Bărbulescu,2016-03-12 Time series analysis and modelling represent a large study field, implying the approach from the perspective of the time and frequency, with applications in different domains. Modelling hydro-meteorological time series is difficult due to the characteristics of these series, as long range dependence, spatial dependence, the correlation with other series. Continuous spatial data plays an important role in planning, risk assessment and decision making in environmental management. In this context, in this book we present various statistical tests and modelling techniques used for time series analysis, as well as applications to hydro-meteorological series from Dobrogea, a region situated in the south-eastern part of Romania, less studied till now. Part of the results are accompanied by their R code.

Graduate Research Supervision in the Developing World Erik Blair,Danielle Watson,Shikha Raturi,2020-01-03 Recognising that graduate supervisory practice is not an abstracted academic pursuit, but an activity that is subjectively bounded by content and context, impacted by the experiences and beliefs of supervisee and supervisor, this text explores the unique dynamics of graduate supervision in the Global South, as perceived and experienced by students and academics within those same contexts. Bringing together contributions which reflect a rich diversity of perspectives on supervisory practices at regional universities in the Caribbean and South Pacific, *Graduate Research Supervision in the Developing World* explores how supervisors navigate unscripted supervisory terrain; contextualise supervisory best practices; establish roles and relationships, and work to understand supervisees' needs. By highlighting the effect on graduate supervision of complex sociocultural interplay and the relationship between learning environments and student success, contributors look to locate best practices through analyses of stories of success and failure. As the contributors demonstrate, there is a need to restructure the standardised operation of graduate supervision across diverse faculties. This text will be of great interest to graduate supervisors and their supervisees as well as scholars in the fields of continuing professional development and higher education, in international and comparative education and Sociology of Education.

Biosimilars Shein-Chung Chow,2013-07-29 As many biological products face losing their patents in the next decade, the pharmaceutical industry needs an abbreviated regulatory pathway for approval of biosimilar drug products, which are cost-effective, follow-on/subsequent versions of the innovator's biologic products. But scientific challenges remain due to the complexity of both the manufacturing process and the structures of biosimilar products. Written by a top biostatistics researcher, *Biosimilars: Design and Analysis of Follow-on Biologics* is the first book entirely devoted to the statistical design and analysis of biosimilarity and interchangeability of biosimilar products. It

includes comparability tests of important quality attributes at critical stages of the manufacturing processes of biologic products. Connecting the pharmaceutical/biotechnology industry, government regulatory agencies, and academia, this state-of-the-art book focuses on the scientific factors and practical issues related to the design and analysis of biosimilar studies. It covers most of the statistical questions encountered in various study designs at different stages of research and development of biological products.

Interpreting EMG is a mandatory skill for neurologists and rehabilitation specialists. This textbook provides the reader with a detailed discussion of the concepts and principles underlying electrodiagnostic medicine. It is written for an audience without pre-existing knowledge in this discipline, including beginner technicians and physicians in training. It is an ideal review for seasoned practitioners and those preparing for board examinations. It begins with a review of the foundational sciences and works through the field in twenty chapters, including a large number of case studies demonstrating correct application and interpretation. Appendices of information frequently required in the EMG laboratory, such as Nerve Conduction Study techniques and their age-related normal values, anatomic regions assessed by each NCS and needle EMG studies, safety issues, and other important topics, are also included.

Encyclopedia of Education Law Charles J. Russo, 2008-06-27 CHOICE Outstanding Academic Title for 2009 A welcome addition to any public or academic library, this set would also be of use in a law library where educational law might need to be explored and reviewed at a more basic level than other legal texts. —Sara Rofofsky Marcus, Queensborough Community Coll., Bayside, NY Smaller educational legal summaries exist, and a couple of texts deal with Supreme Court cases about education, but this set provides a unique combination of general educational legal issues and case-specific information. It should be a welcome addition to academic and large public libraries. Also available as an ebook. — Booklist The Encyclopedia of Education Law is a compendium of information drawn from the various dimensions of education law that tells its story from a variety of perspectives. The entries cover a number of essential topics, including the following: Key cases in education law, including both case summaries and topical overviews Constitutional issues Key concepts, theories, and legal principles Key statutes Treaties (e.g., the Universal Declaration on Human Rights) Curricular issues Educational equity Governance Rights of students and teachers Technology Biographies Organizations In addition to these broad categories, anchor essays by leading experts in education law provide more detailed examination of selected topics. The Encyclopedia also includes selections from key legal documents such as the Constitution and federal statutes that serve as the primary sources for research on education law. At the same time, since education law is a component in a much larger legal system, the Encyclopedia includes entries on the historical development of the law that impact on its subject matter. Such a broadened perspective places education law in its proper context in the U.S. legal system.

God and Nature David C. Lindberg,Ronald L. Numbers,2023-11-10 Since the publication in 1896 of Andrew Dickson White's classic *History of the Warfare of Science with Theology in Christendom*, no comprehensive history of the subject has appeared in the English language. Although many twentieth-century historians have written on the relationship between Christianity and science, and in the process have called into question many of White's conclusions, the image of warfare lingers in the public mind. To provide an up-to-date alternative, based on the best available scholarship and written in nontechnical language, the editors of this volume have assembled an international group of distinguished historians. In eighteen essays prepared especially for this book, these authors cover the period from the early Christian church to the twentieth century, offering fresh appraisals of such encounters as the trial of Galileo, the formulation of the Newtonian worldview, the coming of Darwinism, and the ongoing controversies over scientific creationism. They explore not only the impact of religion on science, but also the influence of science and religion. This landmark volume promises not only to silence the persistent rumors of war between Christianity and science, but also serve as the point of departure for new explorations of their relationship, Scholars and general readers alike will find it provocative and readable.
