**Making Sense of Data in the Media** Andrew Bell,Todd Hartman,Aneta Piekut,Alasdair Rae,Mark Taylor,2019-11-04 The amount of data produced, captured and transmitted through the media has never been greater. But for this data to be useful, it needs to be properly understood and claims made about or with data need to be properly scrutinized. Through a series of examples of statistics in the media, this book shows you how to critically assess the presentation of data in the media, to identify what is significant and to sort verifiable conclusions from misleading claims. How accurate are polls, and how should we know? How should league tables be read? Are numbers presented as 'large' really as big as they may seem at first glance? By answering these questions and more, readers will learn a number of statistical concepts central to many undergraduate social science statistics courses. By tying them in to real life examples, the importance and relevance of these concepts comes to life. As such, this book does more than teaches techniques needed for a statistics course; it teaches you life skills that we need to use every single day.

Collective Behavior and Public Opinion Jaap van Ginneken, 2003-04-02 This is a highly innovative and stimulating work with the outline of an entirely new approach to massive and rapid shifts in opinion and communication. It discusses and explains such mysterious phenomena as sudden crazes and crashes, fads and fashion, hypes and manias, moral outrage and protests, gossip and rumors, and scares and panics. Rich in alternative insights, the book is divided into four parts. Part I discusses the points of departure: the most relevant processes of opinion formation and communication. Part II is about phenomena on three different levels, that have traditionally been studied within the twin fields of mass psychology and collective behavior sociology. Part III focuses on the three prime forms of emotional coloring of opinion currents and public moods. Part IV discusses a combination of some of the aforementioned phenomena: successive crazes and crashes in financial markets, and looks at why technological and economic, and social and opinion forecasts often fail so miserably. The audience for this book includes students of social and mass psychology, social movements and collective behavior sociology, and opinion and communication in general. Professionals in public relations, marketing, health, finance, and politics, as well as the educated lay audience, will also find this book of interest.
