An Introduction to Human Factors Engineering Christopher D. Wickens, John Lee, Sallie E. Gordon, Yili Liu, 2014 For undergraduate courses in Human-Factors Engineering, Human-Computer Interaction, Engineering Psychology, or Human-Factors Psychology. Offering a somewhat more psychological perspective than other human factors books on the market, this text describes the capabilities and limitations of the human operator-both physical and mental-and how these should be used to guide the design of systems with which people interact. General principles of human-system interaction and design are presented, and included are specific examples of successful and unsuccessful interactions. It links theories of human performance that underlie the principles with real-world experience, without a heavy engineering-oriented perspective.

Handbook of Accelerator Physics and Engineering Alexander Wu Chao, Karl Hubert Mess, 2013 Edited by internationally recognized authorities in the field, this expanded and updated new edition of the bestselling Handbook, containing more than 100 new articles, is aimed at the design and operation of modern particle accelerators. It is intended as a vade mecum for professional engineers and physicists engaged in these subjects. With a collection of more than 2000 equations, 300 illustrations and 500 graphs and tables, here one will find, in addition to the common formulae of previous compilations, hard-to-find, specialized formulae, recipes and material data pooled from the lifetime experience of many of the world's most able practitioners of the art and science of accelerators. The eight chapters include both theoretical and practical matters as well as an extensive glossary of accelerator types. Chapters on beam dynamics and electromagnetic and nuclear interactions deal with linear and nonlinear single particle and collective effects including spin motion, beam-environment, beam-beam, beam-electron, beam-ion and intrabeam interactions. The impedance concept and related calculations are dealt with at length as are the instabilities associated with the various interactions mentioned. A chapter on operational considerations includes discussions on the assessment and correction of orbit and optics errors, real-time feedbacks, generation of short photon pulses, bunch compression, tuning of normal and superconducting linacs, energy recovery linacs, free electron lasers, cooling, space-charge compensation, brightness of light sources, collider luminosity optimization and collision schemes. Chapters on mechanical and electrical considerations present material data and important aspects of component design including heat transfer and refrigeration. Hardware systems for particle sources, feedback systems, confinement and acceleration (both normal conducting and superconducting) receive detailed treatment in a subsystems chapter, beam measurement techniques and apparatus being treated therein as well. The closing chapter gives data and methods for radiation protection computations as well as much data on radiation damage to various materials and devices. A detailed name and subject index is provided together with reliable references to the literature where the most detailed information available on all subjects treated can be found.

Formulas and Theorems for the Special Functions of Mathematical Physics Wilhelm Magnus, Fritz Oberhettinger, Raj Pal Soni, 2013-11-11 This is a new and enlarged English edition of the book which, under the title *Formeln und Satze fur die Speziellen Funktionen der mathematischen Physik* appeared in German in 1946. Much of the material (part of it unpublished) did not appear in the earlier editions. We hope that these additions will be useful and yet not too numerous for the purpose of locating with ease any particular result. Compared to the first two (German) editions a change has taken place as far as the list of references is concerned. They are generally restricted to books and monographs and accommodated at the end of each individual chapter. Occasional references to papers follow those results to which they apply. The authors felt a certain justification for this change. At the time of the appearance of the previous edition nearly twenty years ago much of the material was scattered over a number of single contributions. Since then most of it has been included in books and monographs with quite exhaustive bibliographies. For information about numerical tables the reader is referred to *Mathematics of Computation*, a periodical published by the American Mathematical Society; *Handbook of Mathematical Functions with formulas, graphs and mathematical tables* National Bureau of Standards Applied Mathematics Series, 55, 1964, 1046 pp., Government Printing Office, Washington, D.C., and *FLETCHER, MILLER, ROSENHEAD, Index of Mathematical Tables*, Addison-Wesley, Reading, Mass.) .. There is a list of symbols and abbreviations at the end of the book.

Financial Modelling with Forward-looking Information Nadi Serhan Aydın, 2017-06-12 This book focuses on modelling financial information flows and information-based asset pricing framework. After introducing the fundamental properties of the framework, it presents a short information-theoretic perspective with a view to quantifying the information content of financial signals, and links the present framework with the literature on asymmetric information and market microstructure by means of a dynamic, bipartite, heterogeneous agent network. Numerical and explicit analyses shed light on the effects of differential information and information acquisition on the allocation of profit and loss as well as the pace of fundamental price discovery. The dynamic programming method is used to seek an optimal strategy for utilizing superior information. Lastly, the book features an implementation of the present framework using real-world financial data.

RF Linear Accelerators Thomas P. Wangler, 2008-03-03 Borne out of twentieth-century science and technology, the field of RF (radio frequency) linear accelerators has made significant contributions to basic research, energy, medicine, and national defense. As we advance into the twenty-first century, the linac field has been undergoing rapid development as the demand for its many applications, emphasizing high-energy, high-intensity, and high-brightness output beams, continues to grow. RF Linear Accelerators is a textbook that is based on a US Particle Accelerator School graduate-level course that fills the need for a single introductory source on

linear accelerators. The text provides the scientific principles and up-to-date technological aspects for both electron and ion linacs. This second edition has been completely revised and expanded to include examples of modern RF linacs, special linacs and special techniques as well as superconducting linacs. In addition, problem sets at the end of each chapter supplement the material covered. The book serves as a must-have reference for professionals interested in beam physics and accelerator technology.

Strategic Communication Steve A. Tatham, 2008 This paper attempts to address a perceived gap in UK defence thinking which currently has little documentation on the emerging and cross governmental art of Strategic Communication. After defining the term, this paper attempts to locate its utility within the defence community, considering its relationship with Media and Information Operations. The paper notes, that at its core, Strategic Communication can only be successful when three processes are clearly understood: the role of strategic communication in campaigning, the actual cognitive process of communication and the empirical analysis of target audiences. The dangers of over-reliance upon polling are considered concurrently. The paper concludes with the place of Strategic Communication within UK military operations, the need for robust measurements of effectiveness and a short assessment of the challenges of emerging and new media--P. The Sling and the Stone Thomas X. Hammes, 2006-02-17 4GW (Fourth Generation Warfare) is the only kind of war America has ever lost. And we have done so three times – in Vietnam, Lebanon, and Somalia. This form of warfare has also defeated the French in Vietnam and Algeria, and the USSR in Afghanistan...As the only Goliath left in the world, we should be worried that the world's Davids have found a sling and stone that work. – Chapter 1, The Sling and the Stone: On War in the 21st Century. The War in Iraq. The War on Terror. These types of asymmetrical warfare are the conflicts of the 21st century – and show how difficult it is for the world's remaining superpower to battle insurgents and terrorists who will fight unconventionally in the face of superior military power. This change in military conflict may seem sudden.

Designing for People John D. Lee, Christopher D. Wickens, Yili Liu, Linda Ng Boyle, 2017 Whether it is the car you drive or the app on your smartphone, technology has an increasingly powerful influence on you. When designed with people in mind, this influence can improve lives and productivity. This book provides a broad introduction on how to attend to the needs, capabilities, and preferences of people in the design process. We combine methods of design thinking and systems thinking to understand people's needs and evaluate whether those needs are met. This book also provides a detailed description of the capabilities and limits of people—both mental and physical—and how these can guide the design of everything from typography to teams and from data visualization to habits. The book includes: * Over 70 design principles for displays, controls, human-computer interaction, automation, and workspace layout * Integrative discussion of the research and theory underlying these guidelines, supported by over 1,000 references * Examples of successful and unsuccessful designs and exercises that link principles and theory to applications in consumer products, the workplace, and high risk-systems We hope this book will give a useful introduction to students entering the field and will also serve as a reference for researchers, engineers, and designers.
