### **Radiotherapy of Intraocular and Orbital Tumors** R.H. Sagerman,W.E.

Alberti,2012-12-06 Since the publication of the first edition of Radiotherapy of Intraocular and Orbital Tumors in 1993 the treatment programs for cure have changed from the dominance of surgical resection to the utilization of radiation therapy with preservation of the eye intact and preservation of vision. In 2002 about 2,300 primary eye tumors will be diagnosed in the United states, 75% of which will be choroidal melanomas, 20% retinoblastomas, and the remainder a wide variety of tumors - malignant lymphoma, rhabdomyosarcomas, liposarcomas, meningiomas, malignant fibrous histiocytomas, etc. Even so, the majority of malignant tumors of the eye are metastatic, primarily from cancers of the lung or breast. The impact of newer imaging studies, including computed tomography, magnetic resonance imaging, and ultrasound with and without contrast medium, have allowed for better tumor definition, more precise treatment techniques, and major improvement in local control, with preservation of the eye intact and excellent survival. The better histologic definition of the tumor has selected more appropriately the cases suitable for adjuvant chemotherapy particularly demonstrated by the combined integrated multimodal treatment of rhabdomyosarcoma without enucleation. Surgical techniques are now being reserved for biopsy and for treatment failures, a dramatic change in treatment approaches since 1993. The second edition by Sagerman and Alberti clearly demonstrates this major change in treatment. The volume explores the impact of diagnostic workup, the role of surgery, the role of external beam radiation therapy, the use of radioactive plaques, photocoagulation, cryotherapy, and other less major surgical procedures.

### **The Hidden Variables Theory: The Initial Values of the Fundamental Constants in Physics** Israel Fried,2009-08-25

In this revision: The electric charge of a subatomic particle is originated from its Orbital Angular Momentum (OAM). The electron mass is a magnitude that expresses quantitatively the square of its magnetic flux quantum. The proton, the neutron and all baryons consist of three energy levels on which the quarks are orbiting. The third energy level is equivalent to 80.5 GeV; it plays a role at decaying process through the weak force. The quark's OAM is a third or two thirds of the reduced Planck constant. The proton's missing spin is resolved by quarks OAM contribution. The electron is a bound state composition of a negative Pion and an electron Neutrino. The theory predicts a neutral boson of 160GeV (alongside to W<sup>+</sup> boson from a 240GeV decaying particle). The 2007 data analysis at CDF (Tevatron) showed this possibility. Apparently this was a valid finding despite the final results. The 240GeV particle can also decay to two W<sup>+</sup> and one W<sup>-</sup> Bosons instead of 160GeV Boson which makes it hard to be detected.

*Gas Phase Ion Chemistry* Michael T. Bowers,2016-01-22 Gas Phase Ion Chemistry, Volume 1 covers papers on the advances of gas phase ion chemistry. The book discusses the advances in flow tubes and the measurement of ion-molecule rate coefficients and product distributions; the ion chemistry of the earth's atmosphere; and the classical ion-molecule collision theory. The text also describes statistical methods in reaction dynamics; the state selection by photoion-photoelectron coincidence; and the effects of temperature and pressure in the kinetics of ion-molecule reactions. The energy distribution in the unimolecular decomposition of ions, as well as the rapidity of ion-molecule reactions are also encompassed. Chemists, physicists, and people working in aeronomy laboratory and involved in space research will find the book invaluable.

*Wolf-Rayet Stars* Karel A. van der Hucht,Peredur M. Williams,2012-12-06 In this IAU Symposium on Wolf-Rayet stars, binary aspects received ample attention, notably because of the recognition that many observations of spectral and photometric variability at all accessible wavelengths are related to colliding winds or other forms of wind interaction. The basic structure of the conference and its proceedings is basic parameters and general

properties of WR stars; state of the art model atmospheres for WR stars, anisotropic mass loss and disk formation of WR stars, properties of WR binaries; influence of stellar winds on mass transfer in hot massive binary evolution; dust formation near WR stars and other circumstellar phenomena; and hydrodynamics and high-energy physics of colliding winds in WR+O binaries and of WR winds interacting with compact objects. Within this framework 20 invited reviews, 38 invited oral contributions, and 76 poster papers were presented at the Symposium, entertaining 111 astronomers from 24 countries. These proceedings provide up-to-date information on all aspects of Wolf-Rayet atmospheres, binaries, and colliding winds.

**Extrasolar Planets** Rudolf Dvorak, 2008-06-25 This latest, up-to-date resource for research on extrasolar planets covers formation, dynamics, atmospheres and detection. After a look at the formation of giant planets, the book goes on to discuss the formation and dynamics of planets in resonances, planets in double stars, atmospheres and habitable zones, detection via spectra and transits, and the history and prospects of ESPs as well as satellite projects. Edited by a renowned expert in solar system dynamics with chapters written by the leading experts in the method described -- from the US and Europe -- this is an ideal textbook for graduates, students in astronomy, and astronomers.

**Orbital Mechanics for Engineering Students** Howard D Curtis, 2009-10-26 Orbital Mechanics for Engineering Students, Second Edition, provides an introduction to the basic concepts of space mechanics. These include vector kinematics in three dimensions; Newton's laws of motion and gravitation; relative motion; the vector-based solution of the classical two-body problem; derivation of Kepler's equations; orbits in three dimensions; preliminary orbit determination; and orbital maneuvers. The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. NEW: Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions NEW: Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10 New examples and homework problems

**Spectrographic Orbital Elements for the Binary H.D. 110533** Dominion Astrophysical Observatory (Canada), McKellar, Andrew, Hubert Reeves, 1954

*Theory of Atmospheric Radiative Transfer* Manfred Wendisch, Ping Yang, 2012-04-16 Aimed at the senior undergraduate and graduate level, this textbook fills the gap between general introductory texts offering little detail and very technical, advanced books written for mathematicians and theorists rather than experimentalists in the field. The result is a concise course in atmospheric radiative processes, tailored for one semester. The authors are accomplished researchers who know how to reach their intended audience and provide here the content needed to understand climate warming and remote sensing for pollution measurement. They also include supplementary reading for planet scientists and problems. Equally suitable reading for geophysicists, physical chemists, astronomers, environmental chemists and spectroscopists. A solutions manual for lecturers will be provided on [www.wiley-vch.de/supplements](http://www.wiley-vch.de/supplements).

Orbital Cellulitis and Periorbital Infections Michael T. Yen, Thomas E. Johnson, 2017-10-06 This book discusses the evaluation, diagnosis, and treatment of infections of the orbit and periorbital region and is written by experts in the fields of ophthalmology, oculoplastic

surgery, otolaryngology, neurosurgery, and radiology. Infections of the orbit can be challenging to diagnose and manage. With the changing microbiology that has occurred over the years, as well as the introduction of new antibiotics, minimally invasive surgical approaches to the sinuses and orbits, and improved imaging techniques, it is often difficult for practitioners to stay current with the latest testing, medical treatments, and surgical approaches. Furthermore, as more ophthalmologists are joining hospital-based practices or managed care practices, they often feel uncomfortable when asked to manage these types of patients, either independently or in collaboration with other specialists such as ENT and neurosurgery. Even in many hospitals without ophthalmology coverage, where orbital cellulitis is cared for by otolaryngology and neurosurgery, these specialists also need to be current on the changing trends in managing orbital infections. *Orbital Cellulitis and Periorbital Infections* fills the need for a single-source reference for practitioners to turn to for comprehensive information regarding the diagnosis and management of orbital cellulitis. In this book, each chapter is in-depth, yet can also serve as a quick-reference guide. *Orbital Cellulitis and Periorbital Infections* is an excellent resource for those in training as well as seasoned practitioners who need to be updated on the newest diagnostic and treatment techniques for orbital cellulitis and periorbital infections.
