**French Colonial Documentary** Peter J. Bloom, 2008 Despite altruistic goals, humanitarianism often propagates foreign, and sometimes unjust, power structures where it is employed. Tracing the visual rhetoric of French colonial humanitarianism, Peter J. Bloom's unexpected analysis reveals how the project of remaking the colonies in the image of France was integral to its national identity. *French Colonial Documentary* investigates how the promise of universal citizenship rights in France was projected onto the colonies as a form of evolutionary interventionism. Bloom focuses on the promotion of French education efforts, hygienic reform, and new agricultural techniques in the colonies as a means of renegotiating the social contract between citizens and the state on an international scale. Bloom's insightful readings disclose the pervasiveness of colonial iconography, including the relationship between natural man and colonial subjectivity; representations of the Senegalese Sharpshooters as obedient, brave, and sexualized colonial subjects; and the appeal of exotic adventure narratives in the trans-Saharan film genre. Examining the interconnection between French documentary realism and the colonial enterprise, Bloom demonstrates how the colonial archive is crucial to contemporary Peter J. Bloom is associate professor of film and media studies at the University of California-Santa Barbara. y debates about multiculturalism in France.

*The Medical Evaluation of Psychiatric Symptoms* Eric G. Meyer, Kelly L. Cozza, James A. Bourgeois, 2023-08-04 Every DSM-5 diagnosis includes an exclusion criterion that the disorder is not better explained by a medical condition. Meeting this criterion can be difficult for a variety of reasons. The psychiatric signs and symptoms of medical disorders are not commonly emphasized in medical textbooks. Further, illness scripts for medical diagnoses do not often overlap with psychiatric disorders, making it difficult to know what medical conditions should be ruled out. For example, irritability is a common symptom in polycystic ovarian disorder, but PCOS is rarely on the differential for irritability. Similarly, while hypothyroidism is commonly linked to the illness script of depression, patients with MDD may be just as likely to have diabetes - an infrequently considered diagnosis for depression. "Buzzword" medical conditions that are commonly prioritized in medical student training can negatively influence classic illness scripts. While such diagnostic possibilities make for good multiple-choice questions, they are frequently rare and may inadvertently undermine important common possibilities. For example, a patient

with chest pain in the context of anxiety is more likely to have asthma, acute coronary syndrome, or even a pulmonary embolism than pheochromocytoma. In a recent white paper issued by the American Psychiatric Association, it has urged psychiatrists to better advocate for patients with severe mental illness who often lack access to primary care. But some psychiatrists may be unfamiliar with physical exam maneuvers and medical review of systems (ROS) questions. Complex medical systems may delegate the physical exam to physicians outside of psychiatry, or there may be a temptation to rely on the emergency room's "medical clearance" as a "medical rule-out." Both can result in decreased familiarity with physical exam techniques previously mastered as part of medical school. A cursory review of the physical exam maneuvers and concise symptom-based medical ROS lists can alleviate some of these concerns. This book is intended to provide psychiatrists and physicians who routinely evaluate psychiatric symptoms with the tools needed to rule out medical conditions that could be causing those symptoms. It will start with an introduction that reviews why the text is needed and potential larger gaps in training that might contribute to the necessity for such a text. Each chapter thereafter will focus on a specific symptom. Each symptom will be defined to ensure accuracy. Then a differential of common medical conditions that can cause that psychiatric symptom will be provided. For each diagnosis key history, physical exam, laboratory, and radiologic findings will be provided that help rule the condition out. Screening tools that can help rule out medical etiologies will also be provided. Where available, positive predictive values (PPVs) will be provided to help users understand the likelihood that a negative finding or result indicated that a medical disorder is not present. While individual aspects of this text exist in other formats, the comprehensive nature of our approach, descriptions of psychiatric symptoms to means of ruling out potential medical etiologies, is not currently available to providers. This text will assist providers in ruling out medical etiologies of common psychiatric symptoms, ensuring patients are diagnosed correctly. Such an improvement has the potential to dramatically improve patient outcomes.

**Sleep-related Epilepsy and Electroencephalography, An Issue of Sleep Medicine Clinics** Madelieine Grigg-Damberger, Nancy R Foldvary-Schaefer, 2012-03-26 This issue on Sleep Electroencephalography (EEG) gives an overview of Electrophysiological readings in sleep with such articles as "The Nuts and Bolts of EEG and "How the Sleep/Wake EEG Changes Across the Lifespan. Identifying abnormal EEG activity and patterns in the Electroencephalographic readings is also discussed. The issue then further focuses in on Seizures and the EEG; specifically, how EEG can be used to diagnosis and identify seizure disorders and differentiate seizures from other paroxysmal nocturnal events, and to diagnose other primary sleep disorders in people with epilepsy.
